Notes to the consolidated and separate financial statements

4 Critical accounting estimates, judgement and assumptions

The preparation of consolidated and seperate financial statements requires management to make judgments, estimates and assumptions that affect the application of accounting policies and reported amounts of assets and liabilities, income and expenses. Actual results may differ from these estimates under different assumptions and conditions.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised prospectively.
Information about significant areas of estimation, uncertainty and critical judgments in applying accounting policies that have the most significant effect on the amounts recognized in the financial statements are described below.

4.1 Insurance and reinsurance contracts- Life Business

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below.
The Company based its assumptions and estimates on parameters available when the financial statements were prepared.
Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Company. Such changes are reflected in the assumptions when they occur.

4.1.1 The methods used to measure insurance contracts future cash flows

The Company primarily uses deterministic projections to estimate the present value of future cash flows. The following assumptions were used when estimating future cash flows for different class of the company's portfolio:

Mortality, longevity and morbidity rates
Assumptions are based on standard industry and national tables, according to the type of contract written and the territory in which the insured person resides. They reflect recent historical experience and are adjusted when appropriate to reflect the Company's own experiences. An appropriate, but not excessive, allowance is made for expected future improvements. Assumptions are differentiated by policyholder gender, underwriting class and contract type. An increase in expected mortality, longevity and morbidity rates will increase the expected claim cost which will reduce future expected profits of the Company.

Expense
Operating expenses assumptions reflect the projected costs of maintaining and servicing in–force policies and associated overhead expenses. The current level of expenses is taken as an appropriate expense base, adjusted for expected expense inflation if appropriate.
An increase in the expected level of expenses will reduce future expected profits of the Company

The cash flows within the contract boundary include an allocation of fixed and variable overheads directly attributable to fulfilling insurance contracts. Such overheads are allocated to groups of contracts using methods that are systematic, rational and are consistently applied to all costs that have similar characteristics.

Lapse and Surrender rates
Lapses relate to the termination of policies due to non–payment of premiums. Surrenders relate to the voluntary termination of policies by policyholders. Policy termination assumptions are determined using statistical measures based on the Company's experience and vary by product type, policy duration and sales trends. An increase in lapse rates early in the life of the policy would tend to reduce profits of the Company, but later increases are broadly neutral in effect.

4.1.2 *Discount rate*
The company insurance contract liabilities are calculated by discounting expected future cash flows at a risk-free rate, plus an illiquidity premium where applicable. Risk free rates are determined by reference to the yields published by the Nigerian Actuarial Society of highly rated sovereign securities in the currency of the life insurance contract liabilities. The illiquidity premium is determined by reference to observable market rates, including sovereign debt and corporate debt rates.

4.1.3 *Risk adjustment for non-financial risk*
The risk adjustment for non-financial risk represents the compensation that the Company requires for bearing the uncertainty about the amount and timing of the cash flows of groups of insurance contracts and covers insurance risk, lapse risk and expense risk. The risk adjustment reflects an amount that an insurer would rationally pay to remove the uncertainty that future cash flows will exceed the best estimate amount.
The Company has estimated the risk adjustment using a confidence level (value at risk) approach in which a full IFRS 17 liability distribution is generated across all non-financial risks and risk adjustment is calculated as the difference between the best estimate liability and the liability value at the chosen confidence level of 99.5%. The resulting risk adjustment corresponds to a confidence level of 75%-80%.

Notes to the consolidated and separate financial statements

4 Critical accounting estimates, judgement and assumptions (cont'd)

4.1.4 *Amortisation of the Contractual Service Margin (CSM)*

The CSM is a component of the asset or liability for the group of insurance contracts that represents the unearned profit the Company will recognise as it provides services in the future. An amount of the CSM for a group of insurance contracts is recognised in profit or loss as insurance revenue in each period to reflect the insurance contract services provided under the group of insurance contracts in that period. The amount is determined by:

- Identifying the coverage units in the group
- Allocating the CSM at the end of the period (before recognising any amounts in profit or loss to reflect the insurance contract services provided in the period) equally to each coverage unit provided in the current period and expected to be provided in the future
- Recognising in profit or loss the amount allocated to coverage units provided in the period

The number of coverage units in a group is the quantity of insurance contract services provided by the contracts in the group, determined by considering the quantity of the benefits provided and the expected coverage period. For groups of the company's life insurance contracts, the quantity of benefits is the contractually agreed sum assured over the period of the contracts. The total coverage units of each group of insurance contracts are reassessed at the end of each reporting period to adjust for the reduction of remaining coverage for claims paid, expectations of lapses and cancellation of contracts in the period. They are then allocated based on probability-weighted average duration of each coverage unit provided in the current period and expected to be provided in the future.

4 Critical accounting estimates, judgement and assumptions (cont'd)

4.1.5 *Assets for insurance acquisition cashflows*

The Company applies judgement in determining the inputs used in the methodology to systematically and rationally allocate insurance acquisition cash flows to groups of insurance contracts. This includes judgements about whether insurance contracts are expected to arise from renewals of existing insurance contracts and, where applicable, the amount to be allocated to groups including future renewals and the volume of expected renewals from new contracts issued in the period

4.2 Insurance and reinsurance contracts- Non-Life Business

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below. The Company based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Company. Such changes are reflected in the assumptions when they occur.

The Company applies the premium allocation approach (PAA) to simplify the measurement of insurance contracts.. For cashflows that are not expected to be settled more than one year after the claims is incurred, the company has elected not to discount such cashflows.

4.2.1 *Claims payment pattern for liability for incurred claims*

In estimating the claims payment pattern for liability for incurred claims, the company sets:

- An assumption regarding the future timing of claim settlement is required as the IFRS 17 requires the determination of probability weighted future cash flows. Weighted future cash flows will include expected claim payment, expected cost of settling the claims, unallocated claim expenses that are integral to the claim cost but due to system limitations they cannot be allocated to individual claims (e.g. cost of pool of contract cars), legal costs incurred or expected to be incurred for litigated claims, motor recoveries from third party insurers, salvage and subrogation and directly attributable maintenance expenses. For reinsurers' LIC, same cashflows shall apply as described above but the cashflows are apportioned according to reinsurance arrangement.

Run off triangles are used to project future claims payment generated by direct insurance contracts and claim recovered from reinsurance contracts. Actual claims paid and outstanding claim reserves are grouped by accident year cohorts.

Methodology used for claims reserving is defined by the Company's Reserving Policy and Reserving Guidance, and it relies on the Basic Chain Ladder as well as the Bornhuetter- Ferguson method. Same methodology is applied to claims generated by direct contracts and claim recovered from reinsurance contracts.

The best estimate for claims development or payment to ultimate is determined by the link ratio estimator for each period of development. This is achieved by selecting the weighted averages or simple averages of link ratios for each period of claims development until the ultimate period when the claims development is deemed to be fully run off. For each reserving class that best estimate claim payment pattern is derived separately on a gross basis Insurance contracts and reinsurers' share (claim recovered from reinsurance contracts). The process of selecting link ratios often involves identifying outliers and excluding them.

Analysis of Actual versus Expected claim reserves is carried out to assess adequacy of best estimate payment pattern estimated in prior year/period. Where significant deviations are noted, further investigations are carried out to ascertain whether this is indicative of a new trend in the underlying claim development process or whether this is caused by the occurrence of abnormally large claims that tend to distort the latest link ratios or whether it was caused by certain specific events impacting the claims process that are not expected to recur in the future (e.g. restructuring of claims department, or installing a new admin system or claim backlog). If the cause of the deviation is driven by changes in the claims development process which is expected to be recurring or be permanent in the future (e.g. application of new case reserving practice), then judgement is applied in choosing the link ratio for the most recent accident year cohort.

Consideration is also given on the need to allow for a tail factor for projecting claims payment beyond the available data horizon.

For non-liability claims, the ultimate period is often within 7 - 10 year unless- tail factor is not required.

- Claim payment pattern will be derived for each reserving class or portfolio (portfolio if there is only one reserving class).
- Basically, the payment pattern provides probabilities to project the settlement of claims in future time periods
- For a given portfolio or reserving class, same payment pattern will be applied to project the payment of OCR (outstanding claim reserve), IBNR reserve and Risk Adjustment estimates over future time periods.
- Existing reserving models (primarily the Basic Chain Ladder) will be used to derive the payment probabilities from the link ratios obtained from paid triangles
- Pattern will be derived once a year, that is, at the year-end valuation. It is expected that same payment pattern will be used in the LIC cashflow modelling for interim valuation periods and roll forward.

4 Critical accounting estimates, judgement and assumptions (cont'd)

- However, for reserving class or portfolios which exhibit significant volatility, payment pattern might be reviewed and revised more frequently and also pattern used in LIC model will need to be updated. A change in payment pattern will lead to a change in fulfilment cashflows arising from non-financial assumption change. This change or delta in fulfilment cashflow will be accounted for as an insurance service expense.

- Changes of payment pattern during a financial year will only be considered if justified by facts and circumstances. Examples of facts and circumstances could be as follows:
  i. major changes in claim reporting and settlement processes that would invalidate existing payment pattern (e.g. non-life claims backlog can be quite common arising from dispute in settlement amount or change in policy administration system.
  ii. occurrence of major external systemic events such as a pandemic related lockdown will impact the development factors- hence invalidate existing payment pattern

- It is to be noted that, for consistency, the same payment pattern as used for claim projection will be applied in the projection of Risk Adjustment estimates. The same approach would be used to derive the payment pattern for modelling the LIC cashflows for a portfolio of reinsurance contracts.

- Moreover, it is required to allocate the projected OCR, IBNR and RA to issue year cohorts /underwriting year cohorts. This will necessitate the application of an allocation driver. Projected IBNR, OCR and RA cashflows will be allocated to underwriting year by making use of weights. Weights, as a proxy for coverage, for each underwriting year will be derived from earned premium /revenue (as computed for the LRC). For internal reporting needs, further allocation of IBNR, OCR and RA (risk adjustment) down to more granular levels (issue year cohorts/distribution channels/ cover-section/ client types) will be required. Earned premium weights, as described above, will also be used for a more granular allocation of projected OCR, IBNR and RA.

4.2.2 *Insurance acquisition cash flows*

For the company's PAA eligible contracts, the company is eligible to recognize insurance acquisition cashflows as an expense immediately as incurred or amortize it over the coverage period. The company will make this choice on a portfolio basis. Where the company has not recognized an expense immediately, the company allocates insurance acquisition cash flows to related groups of insurance contracts recognised in the statement of financial position (including those groups that will include insurance contracts expected to arise from renewals). An asset for insurance acquisition cash flows is recognised for acquisition cash flows incurred before the related group of insurance contracts has been recognised.

The effect of electing to recognise insurance acquisition cash flows as an expense when incurred for a group of insurance contracts is to increase the liability for remaining coverage and reduce the likelihood of any subsequent onerous contract loss. There would be an increased charge to profit or loss on incurring the expense, offset by an increase in profit released over the coverage period.

Onerous groups

For groups of contracts that are onerous, the liability for remaining coverage is determined by the fulfilment cash flows. Any loss-recovery component is determined with reference to the loss component recognised on underlying contracts and the recovery expected on such claims from reinsurance contracts held.

4.2.3 *Non-performance risk for reinsurers (reinsurance contracts)*

In estimating the value of reinsurance contracts held, the company has considered the risk of non-performance by reinsurers. This includes assessing credit risk based on reinsurers' credit ratings, historical payment performance, and market conditions.
As at the valuation date, the company applied the average probability of default (PD) for each reinsurer based on credit ratings, using data from Fitch's Global Corporate Finance Average Cumulative Default Rates (1990–2023), as Fitch rates most counterparties in Nigeria. These PDs were applied to each reinsurer's share of liabilities (EAD) to estimate potential default exposure.
The expected loss (EL) was calculated as: EL = EAD × PD × LGD, where LGD (Loss Given Default) was based on management judgment and historical recovery rates by rating class.

Risk adjustment for non-financial risk

The risk adjustment for non-financial risk is the compensation that the Company requires for bearing the uncertainty about the amount and timing of the cash flows of groups of insurance contracts. The risk adjustment reflects an amount that an insurer would rationally pay to remove the uncertainty that future cash flows will exceed the expected value amount.

The Company has estimated the risk adjustment using a confidence level (value at risk) approach in which a full IFRS 17 liability distribution is generated across all non-financial risks and risk adjustment is calculated as the difference between the best estimate liability and the liability value at the chosen confidence level of 99.5%. The resulting risk adjustment corresponds to a confidence level of 75%-80%.

The valuation of the long term insurance contract liabilities was done by Awunor Benjamin Ebube (FRC/2015/PRO/NAS/004/00000012946) of Becoda Consulting (FRC/2015/NAS/00000012946).

The Liability Adequacy Test (LAT) was carried out by Awunor Benjamin Ebube (FRC/2015/PRO/NAS/004/00000012946) of Becoda Consulting (FRC/2015/NAS/00000012946). The claims reserve was calculated using the Discounted Inflation Adjusted Basic Chain Ladder method.

Notes to the consolidated and separate financial statements

4 Critical accounting estimates, judgement and assumptions (cont'd)

4.3 Expense Allocation

The Group has split its expenses into attributable and non-attributable

- For Non-Life Business a split of the attributable costs using insurance contract liability weight (LIC & LRC) was recognised
- Expenses allocated to retail business are split among cohorts using policy counts.

4.4 Fair value measurement

The Group measures fair values using the following hierarchy of methods:

Level 1: Quoted market price in an active market for an identical instrument

Level 2: Valuation techniques based on observable inputs. This category includes instruments valued using quoted market prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data.

Level 3: This includes financial instruments, the valuation of which incorporate significant inputs for the asset or liability that is not based on observable market data (unobservable inputs). Unobservable inputs are those not readily available in an active market due to market illiquidity or complexity of the product. These inputs are generally determined based on inputs of a similar nature, historic observations on the level of the input or analytical techniques.

Valuation of land and building

On a determined basis, the Group engages the services of external, independent and qualified valuers to determine the fair value of the land and buildings depending on the measurement model adopted by the entities within the Group. The Group's land and buildings were revalued by external, independent firms of estate surveyors and valuers, John Odiba & Partners with FRC number (FRC/2022/00000014211) and Funsho Oladimeji & Company with FRC number (FRC/2012/0000000000109). The principal valuers are Mr. Odiba John Malik with FRC number FRC/2022/PRO/NIESV/002/455450 and Oladimeji Funsho Peter with FRC number FRC/2013/NIESV/00000001304.

Valuation of investment properties

The Group's investment property is held for the purpose of capital appreciation and rental income generation. The Group's investment properties were revalued by an external, independent firm of estate surveyors and valuers, John Odiba & Partners with FRC number (FRC/2022/00000014211). The name of the principal valuer is Mr. Odiba John Malik (FRC/2022/PRO/NIESV/002/455450). Fair value gains have been recognized in the income statement in line with the fair value model of IAS 40.

4.5 Income taxes

Non-life business

The current income tax charge is calculated on taxable income on the basis of the tax laws enacted or substantively enacted at the reporting date. The Company applies Section 16 of the Company Income Tax Act as amended by the Finance Act 2020. It states that an Insurance business shall be taxed as:

- an insurance company, whether proprietary or mutual, other than a life insurance company; or
- a Nigerian company whose profit accrued in part outside Nigeria

- The profit on which tax may be imposed, shall be ascertained by taking the gross premium, interest and other income receivable in Nigeria less reinsurance expenses. The following shall also be deducted from the balance so arrived at:

- a reserve fund for unexpired risks in the financial year computed on a time apportionment basis of the risks accepted during the financial year.

- claims and outgoings provided that any amount not utilised towards settlement of claims and outgoings shall be added to the total profits of the following year.

Life Business

The profits on which tax may be imposed in an insurance company is a life insurance company, whether proprietary or mutual, other than a Nigerian company which carries on business through a permanent establishment in Nigeria shall:

- be the investment income captured for tax purposes to income derived from the investment of shareholders' fund.

The Directors have adopted current tax practices in computing the tax liabilities. Actual results may differ from these estimates based on the interpretation by the tax authorities. The Directors acknowledge that changes in the application of the current tax practices can have a significant impact on the tax expense and tax liabilities recorded in the financial statements.

5 Segment Information

IFRS 8 requires operating segments to be identified on the basis of internal reports about components of the Group that are regularly reviewed by the Chief Executive Officer to allocate resources to the segments and to assess their performance.

The Group's reportable segments are identified as follows;

- Non-life insurance
  The Non-Life business segment comprises general insurance to individuals and businesses. Non-life insurance products offered include auto, household, commercial and business interruption insurance. These products offer protection of policyholder's assets and indemnification of other parties that have suffered damage as a result of policyholder's accident

- Life insurance
  The life insurance segment offers pure risk, annuity, investment linked and protection products and other long-term contracts (both with and without insurance risk). It comprises a wide range of whole life, term assurance, guaranteed pensions, pure endowment pensions etc. Revenue from this segment is derived primarily from insurance premium, fees and commission income and investment income.

- Takaful Insurance

  Hilal Takaful undertakes the underwriting of Family Takaful and General Takaful, using a Hybrid Wakalah-Mudarabah model for its Takaful-Insurance operations.

- Fin Insurance
  A seperate subsidiary in the Non-Life business segment comprises general insurance to individuals and businesses. Non-life insurance products offered include auto, household, commercial and business interruption insurance. These products offer protection of policyholder's assets and indemnification of other parties that have suffered damage as a result of policyholder's accident

- Leasing

The reportable segments are components of the Group for which discrete financial information is available.

No operating segments have been aggregated to form the above reportable operating segments.

The accounting policies of the reportable segments are the same as the Group's accounting policies. Segment profit represents the profit earned by each segment without allocation of certain expenses, certain finance costs and income taxes which are managed on a group basis. This is the measure reported to the Group's Chief Executive for the purposes of resource allocation and assessment of segment performance.

5.1 Revenue from major products and services

The Group's revenue from major products and services is disclosed in the segment revenue tables (see note 5.4).

5.2 Geographical information

The Group's revenue and information about its segment net assets by geographical location are as follows:

	Revenue		**Net assets**	
In thousands of naira	**30-Jun-26**	**31-Dec-25**	**30-Jun-26**	**31-Dec-25**
Within Nigeria	29,006,639	24,465,567	81,215,449	72,860,041
	29,006,639	24,465,567	81,215,449	72,860,041

5.3 Information about major customers

The Group does not derive revenue from an individual policyholder or intermediary that represents 10% or more of the Group's total revenue.

Notes to the consolidated and separate financial statements

For the year ended 31 December

11.3 Principal subsidiary undertakings

The Group is controlled by Cornerstone Insurance Plc ("the Parent Company") which is incorporated in Nigeria. The controlling interests of Cornerstone Insurance Plc in the group entities are as follows:

Company name	Country of incorporation	ature of busines	% equity holdings
Fin Insurance Company Limited	Nigeria	Non-life insuran	96.68%
Cornerstone Leasing and Investment Limited	Nigeria	Leasing services	100.00%
Hilal Takaful Nigeria Limited previously called Cornerstone Takaful Nigeria	Nigeria	Takaful Insura	100.00%

11.4 Other information on subsidiaries

11.4.1 Cornerstone Leasing and Investment Limited commenced operation on 1 July 2004 as part of the parent company's ultimate strategic plan to provide world class leasing services. The Company was formerly a subsidiary of Cornerstone Asset Management Limited who later in 2009 transferred its shareholding in the company to the ultimate parent, Cornerstone Insurance Plc. Cornerstone Leasing and Investment Limited provides convenient asset acquisition options to both corporate organisations and individuals. The Company's primary place of business is Lagos, Nigeria.

11.4.2 Fin Insurance Company Limited is a private limited liability company incorporated in Nigeria and its primary activity is the provision of Non-life insurance business. Cornerstone Insurance Plc acquired 96.68% equity interest in Fin Insurance Company Limited in 2015. The acquisition was made in a bid to increase the market share of the Non-life Insurance business of the entity. The Company's primary place of business is Lagos, Nigeria. The proportion of the equity interest of the Company owned by the non-controlling interest is 3.32%.

11.5 Significant restrictions

The Group does not have significant restrictions on its ability to access or use its assets and settle its liabilities other than those resulting from the regulatory frameworks under which the insurance business operates. The regulatory frameworks require all insurance companies to maintain certain levels of regulatory capital and liquid assets and comply with other ratios such as the solvency margin.

investment properties are being carried in the name of Yankari Insurance Limited, which is Fin Insurance former business na

Details of the property	Documentatio	ken for perfectio	Owner	Carrying amount
Land and Twin Duplex, Plot 667 (A&B) Umozi Street, off Ladoke Akintola Boulevant, Garki II, Abuja	C of O DD 02.08.2005	The Group has a certified true copy of C of O, though its in the name of Yankari Insurance Co. Ltd.	Fin Insurance Company Limited	620,000
Land and Two Blocks Flats, House no 16&18, 2nd Avenue, 21(D) Road by Babangida market, beside Dominion Chapel, FHA Estate, Lugbe, Abuja	FHA allocation letter FHA/ES/FCT/lg/nhp/33 DD 09.11.2001	The Group has a certified true copy of letter of allocation in the name of Yankari Insurance Co. Ltd.	Fin Insurance Company Limited	964,000
				1,584,000

12.2 Measurement of fair values

12.2.1 ***Fair value hierarchy***

The fair value of investment properties was determined by an external, independent property valuer, having appropriate recognised professional qualifications and recent experience in the location and category of the property being valued. The independent valuer, John Odibah & Partners with FRC number FRC/2022/00000014211 valued the properties on the basis of open market value as at 31 December 2025. The principal valuer is Mr. Odiba John Malik with FRC number FRC/2022/PRO/NIESV/002/455450.

The fair value measurement for the investment properties of ₦1,584 million (2024: ₦872 million) has been categorised as a Level 3 fair value based on the inputs into the valuation technique used.

12.2.2 ***Valuation technique and significant unobservable inputs***

The following table shows the valuation technique used in measuring the fair value of investment property, as well as the significant unobservable inputs used.

Valuation technique	Significant unobservable inputs	key unobservable inputs and fair value measurement
The fair values are determined by applying the direct market evidence comparative method of valuation to derive the open market value. This valuation model reflects the current price on actual transaction for similar properties in the neighbourhood in recent time. References were made to prices of land and comparable properties in the neighbourhood. The data obtained were analysed and adjustment was made to reflect differences in site area and the actual location, quality of construction and off-site facilities.	-Prices per square meter -Rate of development in -Quality of the building -Influx of people and/or business to the area	The estimated fair value would increase/(decrease) if the rate of development in the area increases/(decreases), quality of the building increases/(decreases), influx of people and/or business to the area increases/(decreases).

	2,325,445	**2,870,476**	**2,632,401**	**3,399,768**

Notes to the consolidated and separate financial statements

20.1 Sundry creditors comprise vat and other payables to vendors in the ordinary course of business.

20.2 Accounts payables comprise audit fees and rent payable.

21 Taxation

21.1 Tax expense

The tax expense recognised in profit or loss is as follows:

		Group		Company	
In thousands of naira		**30-Jun-26**	**31-Dec-25**	**30-Jun-26**	**31-Dec-25**
Minimum tax		**28,000**	**740,415**	**-**	**589,249**
Income tax expense					
Income tax based on the taxable profit/loss for the year		-	-	-	-
Tertiary Education Tax		673,856	-	673,856	-
Police Trust Fund Levy		-	-	-	-
Information technology development levy (NITDA)		180,498	-	180,498	-
Total current income tax for the year		**854,355**	**-**	**854,355**	**-**
Adjustment in respect of prior years					
Deferred tax Credit (charge) recognised in profit or loss	21.3.3	-	-	-	-
Tota Income tax expense		**854,355**	**-**	**854,355**	**-**
Total minimum and income tax charge for the year		**882,355**	**740,415**	**854,355**	**589,249**

The charge for current income tax in these financial statements is based on the provisions of the Companies Income Tax Act, Cap C21, Laws of the Federation of Nigeria (LFN) 2004 as amended and Education Tax Act, Cap E4, Laws of the Federation of Nigeria 2004 along with other tax laws such as the Finance Act 2020, 2021 and 2022.

21.2 Current tax liabilities

The movement in current tax liabilities during the year is as follows:

		Group		Company	
In thousands of naira		**30-Jun-26**	**31-Dec-25**	**30-Jun-26**	**31-Dec-25**
Balance, beginning of the year		801,784	752,982	743,038	460,529
Income tax for the year	21.1	958,487	263,189	854,355	263,189
Minimum Tax	21.1	-	233,850	-	197,899
Payment during the year		(45,141)	(448,237)	-	(178,578)
Balance, end of the year		**1,715,130**	**801,784**	**1,597,393**	**743,038**
Current		1,715,130	801,784	1,597,393	743,038
Non-current		-	-	-	-
		1,715,130	**801,784**	**1,597,393**	**743,038**

21.3 Deferred taxation

Deferred tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets against current tax liabilities and when the deferred taxes assets and liabilities relate to income taxes levied by the same taxation authority on either the taxable entity or different taxable entities where there is an intention to settle the balances on a net basis.

21.3.1 The movement on the deferred tax assets account is as follows:

Deferred tax assets

		Group		Company	
In thousands of naira		**30-Jun-26**	**31-Dec-25**	**30-Jun-26**	**31-Dec-25**
Balance, beginning of the year		-	861,211	-	861,211
