AFRICAN ALLIANCE INSURANCE PLC

NOTES TO THE FINANCIAL STATEMENTS

1. General Information

African Alliance Insurance Company is a public limited company incorporated and domiciled in Nigeria. The registered office is located at 54 Awolowo Road, Ikoyi, Lagos.

The company is principally engaged in the business of providing risk underwriting for life, related financial and pension services, aviation and hospitality services to its customers.

2. Summary of significant accounting policies

The principal accounting policies applied in the preparation of these financial statements are disclosed under General information on the Reporting Entity and Summary of Significant Accounting Policies. These policies have been consistently applied to all the years presented unless otherwise stated.

3 Solvency

The assets backing the life funds are as follows:

	Company	
	2024	2023
	N000	N000
Government Bonds	2,042,756	3,058,136
Cash and bank balances	183,548	787,831
Investment in quoted equity	86,088	270,453
Total	<u>2,312,393</u>	<u>4,116,420</u>

4 Management of Financial risk

The Group is exposed to various financial risks in connection with its current operating activities, such as foreign currency risk, interest rate risk, credit risk, market risk and liquidity risk. These risks contribute to the key financial risk that the proceeds from the Group's financial assets are insufficient to fund the obligations arising from insurance policy contracts.

The Company manages these risks through the activities of the Audit Committee and the Investment Committee. Each committee meets at least four times per annum to discuss financial risk issues. Management is responsible for implementing recommendations that have been agreed and reporting back to the relevant committee.

The Audit Committee is a committee of the Board of African Alliance Insurance Plc and is responsible for the implementation and monitoring of overall risk management, internal financial controls and financial and actuarial reporting within the Group. The main responsibilities of this Committee are:

- Setting and overseeing the overall standard for financial and actuarial reporting, risk management and internal controls within the Group;
- Monitoring the effectiveness of business risk management processes in the Group;
- Reviewing and assessing the quality of the work done by professionals responsible for financial and actuarial reporting, risk management and internal control;
- Engaging in discussions with external and internal auditors on the quality and acceptability of the control environment and reporting

The Investment Committee is a management committee and is responsible for

- ensuring that insurance and investment contract liabilities are matched with appropriate supporting assets based on the type of benefits payable to the contract holders;
- ensuring that the long-term investment return on assets supporting policy liabilities are sufficient to fund policyholders' reasonable benefit expectations and the shareholders' profit entitlement;
- the implementation and monitoring of the asset management process to ensure that the risks arising from trading positions are effectively managed within the pre-determined risk parameters.

4 Market risk

The business's operations are exposed to market risk. Market risk is the risk of adverse financial impact as a consequence of market movements such as currency exchange rates, interest rates and other price changes. Market risks arise due to fluctuations in both value of assets and liabilities. The company has established policies and procedures in order to manage market risk.

The acquisition of policyholders' assets is based on the design of the product and marketing descriptions. Within these parameters, investments are managed with the aim of maximising policyholder returns while limiting risk to acceptable levels within the framework of statutory requirements. The focus of risk measurement and management is to ensure that the potential risks inherent in an investment are reasonable for the future potential reward, exposure to investment risk is limited to acceptable levels, premium rates are adequate to compensate for investment risk and an adequate reserving policy is applied for long-term policy liabilities. The diverse product range requires a variety of approaches to the management of risk; these range from portfolio management practices and techniques such as optimization of expected risks and rewards based on investment objectives, to asset-liability matching in support of statement of financial position obligations.

4 Foreign exchange risk

Foreign exchange risk is the risk associated with movement in the foreign exchange prices from foreign currency denominated transactions which the Group is exposed to.

The Group is exposed to foreign exchange currency risk primarily through certain transactions denominated in foreign currency. The Group is exposed to foreign currency denominated in dollars and Pound through bank balances in other foreign currencies.

The Group manages its exposure to foreign exchange risk using sensitivity analysis to assess potential changes in the value of foreign exchange positions and impact of such changes on the Group's income. There have been no major changes from the previous year in the exposure to risk or policies, procedures and methods used to measure the risk.

4.3 Liquidity risk

Liquidity risk is the risk that the Company is unable to meet its obligations when they fall due as a result of policyholder benefit payments, cash requirements from contractual commitments, or other cash outflows, such as debt maturities. Such outflows would deplete available cash resources for operational, trading and investments activities. In extreme circumstances, lack of liquidity could result in reductions in the consolidated balance sheet and sales of assets, or potentially an inability to fulfil policyholder commitments. The risk that the Group will be unable to do so is inherent in all insurance operations and can be affected by a range of institution-specific and market-wide events including, but not limited to, credit events, merger and acquisition activity, systemic shocks and natural disasters.

Monitoring and reporting take the form of cash flow measurement and projections for the next day, week and month respectively, as these are key periods for liquidity management. The starting point for those projections is an analysis of the undiscounted contractual cashflow at maturity of the financial liabilities and the expected collection date of the financial assets.

All policyholder funds are invested in appropriate assets to meet the reasonable benefit expectations of policyholders, which include the expectation that funds will be available to pay out benefits as required by the policy contract. The disclosure in note 6 demonstrate that the Group has significant liquid resources. The value for policyholders' liabilities and the assets backing them are as per the carrying amount in the statement of the financial position.

The maturity profile of the total policyholders' liabilities and assets backing them is shown below:

The maturity of non-derivative financial liabilities and financial assets have been compiled based on undiscounted cash flows, which include estimated interest payments.

4.4 Capital management policies and procedures

The Company manages its capital to ensure that the company will be able to continue as going concern and comply with the regulators' capital requirements while maximising the return to stakeholders through the optimisation of the debt and equity balance. The capital structure of the company consists of equity attributable to equity holders of the parent, comprising issued capital, reserves and retained earnings.

The Company's Issued share capital as at 30 June, 2023 is N10,292,500 (2022:N10,292,500). The company is in compliance with the minimum capital requirement of N2 billion as stipulated by the Insurance Act.

	2024 N'000	2023 N'000
Share capital	10,292,500	10,292,500
Share premium	14,365,133	14,365,133
Contingency reserves	2,101,762	1,983,878
Fair value reserves	-	-
Translation reserve	-	-
Retained earnings	(38,951,551)	(40,010,618)
	(12,192,155)	(13,369,105)

The Company's policy is to maintain a strong capital base to maintain investor, creditor and market confidence and to sustain the future development of the business. Management uses regulatory capital ratios to monitor its capital base. Capital is allocated between specific operations and activities and to a large extent driven by optimisation of the return achieved on the capital allocated. The amount of capital allocated to each activity is based primarily on the regulatory capital. In some cases the regulatory requirements do not fully reflect the varying degree of risk associated with different activities. In such cases, the capital requirements may be flexed to reflect differing risk profiles, subject to the overall level of capital to support a particular operation not falling below the minimum required for regulatory purposes. The process of allocating capital to specific operations or activities is undertaken independently of those responsible for the operation by a committee.

The National Insurance Commission (NAICOM) specifies the minimum amount and type of capital that must be held by the company to cover the insurance liabilities. The regulator measures the financial strength of insurance companies using the capital adequacy requirements for the category of company. This test compares insurer's capital against the risk profile.
