STANBIC IBTC HOLDINGS PLC

Directors' report for the six month period ended 30 June 2026

I. Events after the reporting date

There were no events after the reporting date which could have a material effect on the financial position of the Group as at 30 June 2026 which have not been recognised or disclosed.

m. Human resources

Employment of physically challenged

The Company continues to maintain a policy of giving fair consideration to applications for employment made by physically challenged persons with due regard to their abilities and aptitude. The Company's policy prohibits discrimination against physically challenged persons or persons with HIV in the recruitment, training and career development of its employees. In the event of members of staff becoming physically challenged, efforts will be made to ensure that, as far as possible, their employment with Company continues and appropriate training is arranged to ensure that they fit into the Company's working environment.

Health safety and welfare at work

The Company enforces strict health and safety rules and practices at the work environment which are reviewed and tested regularly. The Company's staff are covered under a comprehensive health insurance scheme pursuant to which the medical expenses of staff and their immediate family are covered up to a defined limit. Fire prevention and firefighting equipment are installed in strategic locations within the Company's premises.

The Company has both Group Personal Accident and Workmen's Compensation Insurance cover for the benefit of its employees. It also operates a contributory pension plan in line with the Pension Reform Act 2014.

n. Employee involvement and training

The Company ensures, through various fora, that employees are kept informed on matters concerning them. Formal and informal channels are employed for communication with employees with an appropriate two – way feedback mechanism. In accordance with the Company's policy of continuous staff development, training facilities are provided in the Group's well equipped Training School (the Blue Academy). Employees of the Company attend training programmes organized by the Standard Bank Group (SBG) in South Africa and elsewhere and participate in programmes at the Standard Bank Global Leadership centre in South Africa. The Company also provides its employees with on the job training in the Company and at various Standard Bank locations.

o. Credit Ratings

The revised prudential guidelines, as released by the CBN, requires that banks should have themselves credit rated by a credit rating agency on a regular basis. It is also required that the credit rating be updated on a continuous basis from year to year.

Below are the credit ratings that Stanbic IBTC Group has been assigned by the various credit rating agencies, in no particular order:

Rating Agency	Rated Entity	Report Date	National		Issuer		Outlook
			Long term	Short term	Long term	Short term	
Fitch	Stanbic IBTC Bank Limited	June 2026	AAA(nga)	F1+(nga)	-	-	Stable
	Stanbic IBTC Holdings PLC	June 2026	AAA(nga)	F1+(nga)	-	-	Stable
Standard & Poor's	Stanbic IBTC Bank Limited	July 2026	ngA	ngA-1	B	B	Stable
Global Credit Rating	Stanbic IBTC Bank Limited	June 2026	AAA(NG)	A1+(NG)	-	-	Stable

p. Auditor

The auditor, Messrs. Ernst & Young, having been duly appointed as External Auditor at the Annual General Meeting held on 25 May 2026, will continue in office as auditor until the next Annual General Meeting to be held in 2027.

By order of the Board

STANBIC IBTC HOLDINGS PLC

Corporate governance report for the six month period ended 30 June 2026

Introduction

The Company is a member of the Standard Bank Group, which holds a 68.46% equity holding (through Stanbic Africa Holdings Limited) in the Company.

Standard Bank Group ("SBG") is committed to implementing initiatives that improve corporate governance for the benefit of all stakeholders. SBG's board of Directors remains steadfast in implementing governance practices that comply with international best practice, where substance prevails over form.

Subsidiary entities within SBG are guided by these principles in establishing their respective governance frameworks, which are aligned to SBG's standards in addition to meeting the relevant jurisdictional requirements in their areas of operation.

Stanbic IBTC Holdings PLC ("the Company"), and its subsidiaries ("the Group"), as a member of SBG, operate under a governance framework which enables the board to balance its role of providing oversight and strategic counsel with its responsibility to ensure conformance with regulatory requirements, Group standards and acceptable risk tolerance parameters.

The direct subsidiaries of the Company are: Stanbic IBTC Bank Limited, Stanbic IBTC Asset Management Limited, Stanbic IBTC Pension Managers Limited, Stanbic IBTC Insurance Brokers Limited, Stanbic IBTC Trustees Limited, Stanbic IBTC Stockbrokers Limited, Stanbic IBTC Ventures Limited, Stanbic IBTC Insurance Limited, ZEST Payments Limited and Stanbic IBTC Capital Limited. These subsidiaries have their own distinct boards and take account of the particular statutory and regulatory requirements of the businesses they operate. They also operate under a governance framework that enables their boards to balance their roles in providing oversight and strategic counsel with their responsibility for ensuring compliance with the regulatory requirements that apply in their areas of operation and the standards and acceptable risk tolerance parameters adopted by the Company. In this regard they have aligned their respective governance frameworks to that of the Company. As Stanbic IBTC Holdings PLC is the holding Company for the subsidiaries in the Group, the Company's board also acts as the Group board, with oversight of the full activities of the Group.

A number of committees have been established by the Company's board that assist the board in fulfilling its stated objectives. The committees' roles and responsibilities are set out in their mandates, which are reviewed periodically to ensure they remain relevant. The mandates set out their roles, responsibilities, scope of authority, composition and procedures for reporting to the board.

Codes and regulations

The Company operates in highly regulated markets and compliance with applicable legislation, regulations, standards and codes, including transparency and accountability, remain essential characteristics of its culture. The board monitors compliance with these by means of management reports, which include information on the outcome of any significant interaction with key stakeholders such as regulators.

The Group complies with all applicable legislation, regulations, standards and codes.

Shareholders' responsibilities

The shareholders' role is to approve appointments to the board of Directors and the external auditors as well as to grant approval for certain corporate actions that are by legislation or the Company's articles of association specifically reserved for shareholders. Their role is extended to holding the board accountable and responsible for efficient and effective corporate governance.

Developments during the period ended 30 June 2026

During the year under review, the following developments in the Company's corporate governance practices occurred:

- The Company held its 14th Annual General Meeting on Monday 25 May 2026 at which shareholders approved the 2025 Audited Financial Statements as well as other resolutions tabled before the meeting.
- At the same meeting, shareholders approved a final dividend of 400 kobo per ordinary share of N0.50 kobo each payable to shareholders whose names appeared in the Register of Members as at 26 May 2026.
- The Company filed its annual corporate governance report to the Financial Reporting Council (FRC) in compliance with the Nigerian Code of Corporate Governance 2018.
- The Company made significant progress in the execution of its Sustainability Strategy.
- The Board also recorded significant progress in complying with the Central Bank of Nigeria Corporate Governance Guidelines for Financial Holding Companies in Nigeria.
- The Central Bank of Nigeria (CBN) issued an Exposure Draft of the Revised Guidelines for the Licensing and Regulation of Financial Holding Companies (FHCs) in Nigeria on 10 June 2026.

STANBIC IBTC HOLDINGS PLC

Corporate governance report (continued) for the six month period ended 30 June 2026

Internal Control over Financial Reporting (ICFR) Regulation Implementation

- The Securities and Exchange Commission issued the 'Guidance on the Implementation of Sections 60-63 of The Investments And Securities Act 2007' in March 2021.
- The objective of the SEC guidance issued in March 2021 is to assist management to certify the accuracy of the financial statements prepared as stated in section 60 (2) by submitting on an annual basis, a report of management's assessment of the Company's internal control over financial reporting.
- However, in November 2021, SEC extended the deadline by two years with year-end compliance date moved from December 31st, 2021 to December 31st, 2023.

Internal Control Over Financial Reporting is a process designed by, or under the supervision of, the Company's principal executive and principal financial officers, or persons performing similar functions, and effected by the Company's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company.
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Management is responsible for maintaining a system of internal control over financial reporting ("ICFR") that provides reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with international financial reporting standards (IFRS Accounting Standards). Section 61(2) of the Investments and Securities Act 2007 requires management to annually evaluate whether ICFR is effective at providing reasonable assurance and to disclose its assessment to investors.

In 2026 the Board will :

- ensure directors' training via formal training sessions and information dissemination on relevant issues that they should have to adequately supervise Management.
- broaden the composition of the board to ensure diversity of experience and gender on the Board in line with the CBN Corporate Governance Guidelines for Financial Holding Companies in Nigeria and the Companies and Allied Matters Act 2020.
- enhancing the level of information provided to and interaction with shareholders, investors and stakeholders generally.
- comply with corporate governance and regulatory requirements.
- drive environmental, social , governance goals and practices in line with the Central Bank of Nigeria sustainability principles.

Board and Directors

Board structure and composition

Ultimate responsibility for governance rests with the board of Directors of the Company, who ensure that appropriate controls, systems and practices are in place. The Company has a unitary board structure and the roles of chairman and chief executive are separate and distinct. The Company's chairman is a non-executive director. The number and stature of non-executive Directors ensure that sufficient consideration and debate are brought to bear on decision thereby contributing to the efficient running of the board.

One of the features of the manner in which the board operates is the role played by board committees, which facilitate the discharge of board responsibilities. The committees each have a board approved mandate that is regularly reviewed. The list of Board members as at 30 June 2026 are as follows:

S/N	NAME OF DIRECTOR	DESIGNATION	DATE OF REGULATORY APPROVAL OF APPOINTMENT	CUMULATIVE YEARS OF SERVICE AS AT 30 June 2026
1	Mrs Sola David-Borha	Chairman	26-Sept-20	5 years, 9 months
2	Mr Chuma Nwokocha	Chief Executive	02-Oct-25	9 months
3	Mr Adekunle Adedeji	Executive Director/Chief Finance and Value Management Officer	22-Feb-19	7 years , 4 months
4	Mr Ballama Manu MFR	Non-Executive Director	10-Apr-15	11 years, 2 months
5	Mrs Nnidi Nwuneli MFR	Independent Non-Executive Director	24-Mar-23	3 year, 3 months
6	Prof Fabian Ajogwu SAN OFR	Non-Executive Director	03-Jul-17	8 Years , 11 months
7	Mrs Nkemdilim Uwaje-Begho	Non-Executive Director	18-Nov-19	6 Years, 7 month
8	Dr Babs Omotowa	Independent Non-Executive Director	18-Nov-22	3 year, 7 month
9	Mrs Maryam Aliko Mohammed	Independent Non-Executive Director	17-Dec-24	1 year, 6 month

**Corporate governance report (continued)
for the six month period ended 30 June 2026****Strategy**

The board considers and approves the Company's strategy. Once the financial and governance objectives for the following year have been agreed, the board monitors performance against financial objectives and detailed budgets on an on-going basis, through quarterly reporting.

Regular interaction between the board and the executive is encouraged. Management is invited, as required, to make presentations to the board on material issues under consideration.

Directors are provided with unrestricted access to the Company's management and Company information, as well as the resources required to carry out their responsibilities, including external legal advice, at the Company's expense.

It is the board's responsibility to ensure that effective management is in place to implement the agreed strategy, and to consider issues relating to succession planning. The board is satisfied that the current pool of talent available within the Company, and the ongoing work to deepen the talent pool, provides adequate succession depth in both the short and long term.

Skills, knowledge, experience and attributes of Directors

The board ensures that Directors possess the skills, knowledge and experience necessary to fulfill their obligations. The Directors bring a balanced mix of attributes to the board, including:

- international and domestic experience;
- operational experience;
- knowledge and understanding of both the macroeconomic and the microeconomic factors affecting the Group;
- local knowledge and networks; and
- financial, legal, entrepreneurial and banking skills.

The credentials and demographic profile of the board are regularly reviewed, to ensure the board's composition remains both operationally and strategically appropriate.

Appointment philosophy

The appointment philosophy ensures alignment with all necessary legislation and regulations which include, but are not limited to the requirements of the Central Bank of Nigeria Corporate Governance Guidelines for Financial Holding Companies in Nigeria; Nigerian Code of Corporate Governance; the Companies & Allied Matters Act as well as the legislations of Standard Bank Group's home country.

Consideration for the appointment of Directors and key executives take into account compliance with legal and regulatory requirements and appointments to external boards to monitor potential for conflicts of interest and ensure Directors can dedicate sufficient focus to the Company's business. The board takes cognisance of the skills, knowledge and experience of the candidate, as well as other attributes considered necessary to the prospective role.

In terms of Section 285 (1) of the Company and Allied Matters Act 2020, Mr. Ballama Manu and Mr. Kunle Adededeji retired by rotation at the Company's Annual General Meeting held on 25 May 2026 and were re-elected by Shareholders

The board's size as at 30 June 2026 was nine (9), comprising two (2) executive directors and seven (7) non-executive directors. Of the seven (7) non-executive directors, three (3) namely; Mrs Ndidi Nwuneli MFR, Dr Babs Omotowa and Mrs Maryam Aliko Mohammed are independent non-executive directors. The board has the right mix of competencies and experience.

Board responsibilities

The key terms of reference in the board's mandate, which forms the basis for its responsibilities, are to:

- agree the Group's objectives, strategies and plans for achieving those objectives;
- annually review the corporate governance process and assess achievement against objectives;
- review its mandate at least annually and approve recommended changes;

**Corporate governance report (continued)
for the six month period ended 30 June 2026**

Board responsibilities (continued)

- delegate to the chief executive or any director holding any executive office or any senior executive any of the powers, authorities and discretions vested in the board's Directors, including the power of sub-delegation; and to delegate similarly such powers, authorities and discretions to any committee and subsidiary company board as may exist or be created from time to time;
- determine the terms of reference and procedures of all board committees and review their reports and minutes;
- consider and evaluate reports submitted by members of the executive;
- ensure that an effective risk management process exists and is maintained throughout the bank and its subsidiaries to ensure financial integrity and safeguarding of the Group's assets;
- review and monitor the performance of the chief executive and the executive team;
- ensure consideration is given to succession planning for the chief executive and executive management;
- establish and review annually, and approve major changes to, relevant Group policies;
- approve the remuneration of non-executive Directors on the board and board committees, based on recommendations made by the remuneration committee, and recommend to shareholders for approval;
- approve capital funding for the Group, and the terms and conditions of rights or other issues and any prospectus in connection therewith;
- ensure that an adequate budget and planning process exists, performance is measured against budgets and plans, and approve annual budgets for the Group;
- approve significant acquisitions, mergers, take-overs, divestments of operating companies, equity investments and new strategic alliances by the Group;
- consider and approve capital expenditure recommended by the executive committee;
- consider and approve any significant changes proposed in accounting policy or practice, and consider the recommendations of the statutory audit committee;
- consider and approve the interim financial statements, quarterly results and dividend announcements and notices to shareholders, and consider the basis for determining that the Group will be a going concern as per the recommendation of the audit committee;
- assume ultimate responsibility for financial, operational and internal systems of control, and ensure adequate reporting on these by committees to which they are delegated;
- take ultimate responsibility for regulatory compliance and ensure that management reporting to the board is comprehensive;
- ensure a balanced and understandable assessment of the Group's position in reporting to stakeholders;
- review non financial matters that have not been specifically delegated to a management committee; and
- specifically agree, from time to time, matters that are reserved for its decision, retaining the right to delegate any of these matters to any committee from time to time in accordance with the articles of association.

Delegation of authority

The ultimate responsibility for the Company and its operations rests with the board. The board retains effective control through a well-developed governance structure of board committees. These committees provide in-depth focus on specific areas of board responsibility.

The board delegates authority to the Chief Executive to manage the business and affairs of the Company. The executive committee assists the chief executive when the board is not in session, subject to specified parameters and any limits on the board's delegation of authority to the chief executive.

Membership of the executive committee is set out on page xii.

In addition, a governance framework for executive management assists the Chief Executive in his task. Board-delegated authorities are regularly monitored by the Company secretary's office.

The corporate governance framework has been adopted by the board and formalised with mandate approvals. The corporate governance framework is set out below:

STANBIC IBTC HOLDCO GOVERNANCE STRUCTURE

Board effectiveness and evaluation

The board is focused on continued improvements in its corporate governance performance and effectiveness.

In the 4th quarter of 2025 a Board evaluation exercise was conducted by independent consultants as required by Section 10 of the Central Bank of Nigeria (CBN) Corporate Governance Guidelines for Financial Holding Companies in Nigeria. The report of the consultants also assessed the performance of the individual Directors on the Board for the year under review as perceived by the other Directors based on their individual competence, level of attendance to Board and Board Committee meetings, contribution and participation at these meetings and relationship with other Board members. Individual Director's Assessment reports will be prepared and made available to each director while a consolidated report of the performance of all Directors will also submitted to the Chairman of the Board.

STANBIC IBTC HOLDINGS PLC

Corporate governance report (continued) for the six month period ended 30 June 2026

Induction and training

An induction programme designed to meet the needs of each new director is being implemented. One-on-one meetings are scheduled with management to introduce new Directors to the Company and its operations. The Company secretary manages the induction programme. The CBN Code of Conduct as well as the Securities & Exchange Commission's code of corporate governance is provided to new Directors on their appointment.

Directors are kept abreast of all relevant legislation and regulations as well as sector developments leading to changing risks to the organisation on an on - going basis. This is achieved by way of management reporting and quarterly board meetings, which are structured to form part of ongoing training.

Directors attended various trainings at different periods during the year that included trainings on Strategy, Sustainability, enhancing Board performance, Anti- Money Laundering and Combating the Financing of Terrorism (AML/CFT) . These trainings were aimed at enhancing the understanding of key issues, and skills of directors.

Executive committee members

As at 30 June 2026, the leadership Council (previously executive committee) comprised of 17 members drawn from key functions within the Company as well as its subsidiaries.

S/N	Name	Responsibility
1	Chuma Nwokocha	Chief Executive Stanbic IBTC Holdings PLC
2	Wole Adeniyi	Chief Executive Stanbic IBTC Bank Limited
3	Kunle Adedeji	Executive Director, Stanbic IBTC Holdings PLC

**Corporate governance report (continued)
for the six month period ended 30 June 2026****Board committees**

Some of the functions of the board have been delegated to board committees, consisting of board members appointed by the board, which operates under Charters approved by the board.

Risk management committee

The board is ultimately responsible for risk management. The main purpose of the risk management committee, as specified in its mandate is the provision of independent and objective oversight of risk management within the Company. The committee is assisted in fulfilling its mandate by a number of management committees.

To achieve effective oversight, the committee reviews and assesses the integrity of risk control systems and ensures that risk policies and strategies are effectively managed and contribute to a culture of discipline and control that reduces the opportunity for fraud.

The risk management committee during the year under review was vested, among others, with the following responsibilities:

- to oversee management's activities in managing credit, market, liquidity, operational, legal and other risks of the Group;
- to periodically review the Group's risk management systems and report thereon to the board;
- to ensure that the Group's material business risks are being effectively identified, quantified, monitored and controlled and that the systems in place to achieve this are operating effectively at all times; and
- such other matters relating to the Group's risk assets as may be specifically delegated to the committee by the board.

The committee's mandate is in line with SBG's standards, while taking account of local circumstances.

As at 30 June 2026, the committee consisted of three directors, two non – executive directors and one executive director.

Members' attendance at risk management committee meetings for the period ended 30 June 2026 is stated below:

Name	January	April
Mr Ballama Manu (Chairman)	√	√
Mrs Maryam Aliko Mohammed	√	√
Mr Chuma Nwokocha	√	√

Remuneration committee

During the year under review, the Remuneration Committee (REMCO) was entrusted with responsibilities which include but not limited to the following:

- reviewing the remuneration philosophy and policy;
- considering the guaranteed remuneration, annual performance bonus and pension incentives of the Group's executive Directors and managers;
- reviewing the performance measures and criteria to be used for annual incentive payments for all employees;
- determining the remuneration of the chairman and non-executive Directors, which are subject to board and shareholder approval;
- considering the average percentage increases of the guaranteed remuneration of executive management across the Group, as well as long-term and short-term incentives; and
- agreeing incentive schemes across the Group.

The chief executive attends meetings by invitation. Other members of executive management are invited to attend when appropriate. No individual, irrespective of position, is present when his or her remuneration is discussed.

STANBIC IBTC HOLDINGS PLC

Corporate governance report (continued)

for the six month period ended 30 June 2026

Remuneration committee (continued)

When determining the remuneration of executive and non-executive Directors as well as senior executives, REMCO is expected to review market and competitive data, taking into account the Company's performance using indicators such as earnings.

REMCO utilises the services of a number of suppliers and advisors to assist it in tracking market trends relating to all levels of staff, including fees for non-executive Directors.

The board reviews REMCO's proposals and, where relevant, will submit them to shareholders for approval at the annual general meeting (AGM.). The board remains ultimately responsible for the remuneration policy.

As at 30 June 2026, the committee consisted of five directors, all of whom are non-executives, with the Chairman being an Independent Non-Executive Director.

Members' attendance at REMCO meetings during the period ended 30 June 2026 is stated below:

Name	January	February (OfC)	April
Dr Babs Omotowa (Chairman)	√	√	√
Prof. Fabian Ajogwu SAN	√	√	√
Mrs Nnidi Nwuneli	√	√	√
Mrs Nkemdilim Uwaje-Begho	√	√	√
Mrs Maryam Aliko Mohammed	√	√	√

Remuneration

Introduction

The purpose of this section is to provide stakeholders with an understanding of the remuneration philosophy and policy applied across the Group for executive management, employees, and Directors (executive and non-executive).

Remuneration philosophy

The Group's board and remuneration committee set a remuneration philosophy which is guided by SBG's philosophy and policy as well as the specific social, regulatory, legal and economic context of Nigeria.

In this regard, the Group employs a cost to company structure, where all benefits are included in the listed salary and appropriately taxed.

The following key factors have informed the implementation of reward policies and procedures that support the achievement of business goals:

- the provision of rewards that enable the attraction, retention and motivation of employees and the development of a high performance culture;
- maintaining competitive remuneration in line with the market, trends and required statutory obligations;
- rewarding people according to their contribution;
- allowing a reasonable degree of flexibility in remuneration processes and choice of benefits by employees;
- utilising a cost-to-company remuneration structure; and
- educating employees on the full employee value proposition.

The Group's remuneration philosophy aligns with its core values, including growing our people, appropriately remunerating high performers and delivering value to our shareholders. The philosophy emphasises the fundamental value of our people and their role in ensuring sustainable growth. This approach is crucial in an environment where skills remain scarce.

The board sets the principles for the Group's remuneration philosophy in line with the approved business strategy and objectives. The philosophy aims to maintain an appropriate balance between employee and shareholder interests. The deliberations of REMCO inform the philosophy, taking into account reviews of performance at a number of absolute and relative levels – from a business, an individual and a competitive point of view.

A key success factor for the Group is its ability to attract, retain and motivate the talent it requires to achieve its strategic and operational objectives. The Group's remuneration philosophy includes short-term and long-term incentives to support this ability.

Short-term incentives, which are delivery specific, are viewed as strong drivers of competitiveness and performance. A significant portion of top management's reward is therefore variable, being determined by financial performance and personal contribution against specific criteria set in advance. This incites the commitment and focus required to achieve targets.

Long-term incentives seek to ensure that the objectives of management and shareholders are broadly aligned over longer time periods.

Corporate governance report (continued)
for the six month period ended 30 June 2026
Remuneration policy

The Group has always had a clear policy on the remuneration of staff, executive and non-executive Directors which set such remuneration at levels that are fair and reasonable in a competitive market for the skills, knowledge, experience required and which complies with all relevant tax laws.

REMCO assists the Group's board in monitoring the implementation of the Group remuneration policy, which ensures that:

- salary structures and policies, as well as cash and long term incentives, motivate sustained high performance and are linked to corporate performance objectives;
- stakeholders are able to make a reasonable assessment of reward practices and the governance process; and
- the Group complies with all applicable laws and codes.

Remuneration structure
Non-executive Directors
Terms of service

Directors are appointed by the shareholders at the AGM, although board appointments may be made between AGMs. These appointments are made in terms of the Company's policy. Shareholder approvals for such annual appointments are however sought at the annual general meeting that holds immediately after such appointments are made.

One-third of directors are required to retire annually at every AGM and may offer themselves for re-election. If recommended by the board, their re-election is proposed to shareholders at the AGM. In terms of the Companies and Allied Matters Act 2020 ('CAMA'), if a director over the age of 70 is seeking re-election to the board his age must be disclosed to shareholders at the meeting at which such re-election is to occur.

Fees

Non-executive Directors' receive fixed annual fees and sitting allowances for service on the board and board committees. There are no contractual arrangements for compensation for loss of office. Non-executive Directors do not receive short-term incentives, nor do they participate in any long-term incentive schemes.

REMCO reviews the non-executive Directors' fees annually and makes recommendations on same to the board for consideration. Based on these recommendations, the board in turn recommends a gross fee to shareholders for approval at the annual General Meeting (AGM).

Fees that are payable for the reporting year 01 January to 31 December of each year.

Category	2026 ⁽ⁱ⁾	2025
	₦	₦
Chairman	144,525,000	123,000,000
Non-Executive Directors	110,000,000	93,000,000
Sitting Allowances for Board Meetings ⁽ⁱⁱ⁾		
- Chairman	1,800,000	1,500,000
- Non-Executive Directors	1,530,000	1,300,000

(i) This was presented to shareholders for approval at the 14th AGM of the Company held in May 2026.

(ii) Fees quoted as sitting allowance represent per meeting sitting allowance paid for board, board committees and ad hoc meetings.

No annual fees are payable to committee members with respect to their roles on such committees.

Retirement benefits

Non-executive Directors do not participate in the pension scheme.

Executive Directors

The Company had only two Executive Directors as at 30 June 2026.

Executive Directors receive a remuneration package and qualify for long-term incentives on the same basis as other employees.

Executive Directors' bonus and incentives are subject to an assessment by REMCO of performance against various criteria. The criteria include the financial performance of the Company, based on key financial measures and qualitative aspects of performance, such as effective implementation of Group strategy and human resource leadership. In addition, the Group's remuneration philosophy is designed in such a way as to prevent excessive risk taking by Management.

Management and general staff

Total remuneration packages for employees comprises the following:

- guaranteed remuneration – based on market value and the role played;
- annual bonus – used to stimulate the achievement of Group objectives;
- long term incentives – rewards the sustainable creation of shareholder value and aligns behaviour to this goal;
- pension – provides a competitive post-retirement benefit in line with other employees.
- where applicable, expatriate benefits in line with other expatriates in Nigeria.

Terms of service

The minimum terms and conditions for managers are governed by relevant legislation and the notice period is between one to three months.

Fixed remuneration

Managerial remuneration is based on a salary and benefit structure. This comprises a fixed cash portion, compulsory benefits (medical aid and retirement fund membership) and optional benefits. Market data is used to benchmark salary levels and benefits. Salaries are normally reviewed annually in March.

For all employees, performance-related payments have formed an increasing proportion of total remuneration over time to achieve business objectives and reward individual contribution.

All employees (executives, managers and general staff) are rated on the basis of performance and potential and this is used to influence performance-related remuneration rating and the consequent pay decision is done on an individual basis.

There is therefore a link between rating, measuring individual performance and reward. However, as noted earlier, the Group's remuneration philosophy is designed in such a way as to prevent excessive risk taking by Management.

Short-term incentives

All staff participate in a performance bonus scheme. Individual awards are based on a combination of business unit performance, job level and individual performance. In keeping with the remuneration philosophy, the bonus scheme seeks to attract and retain high-performing managers.

As well as taking performance factors into account, the size of the award is assessed in terms of market-related issues and pay levels for each skill set, which may for instance be influenced by the scarcity of skills in that area.

The Company has implemented a deferred bonus scheme (DBS) to compulsorily defer a portion of incentives over a minimum threshold for some senior managers and executives. This improves alignment of shareholder and management interests and enables clawback under certain conditions, which supports risk management.

Long-term incentives

It is essential for the Group to retain key skills over the longer term. The Group has put in place a deferred bonus scheme for top talents. The scheme is designed to reward and retain top talents. The scheme is designed to align the interests of the Group, its subsidiaries, and key employees, as well as to attract and retain skilled, competent people.

STANBIC IBTC HOLDINGS PLC

Corporate governance report (continued) for the six month period ended 30 June 2026

Clawback

Clawback provisions will apply to identified Material Risk Takers with effect from 01 March 2020.

The Clawback Policy and principles are set out as follows:

Principles for identifying Material Risk Takers:

Total remuneration packages for employees comprises the following:

The Chief Executives and Executive Directors of Stanbic IBTC Holdings and all its subsidiaries.

Clawback provisions for Material Risk Takers are listed below:

1. Clawback provisions apply to the variable remuneration awarded to identified Material Risk Takers. These include cash awards, deferred awards, share incentive awards and long-term incentives and related notional dividend and interest payments.
2. Where there is reasonable evidence that a trigger event occurred prior to the payment/vesting date, but was only discovered within a period of three years after the payment/ vesting date (the clawback period), the REMCO may exercise its discretion to require a participant to repay the clawback amount (or a portion thereof).
3. The clawback amount is (generally speaking) (i) an amount equal to the cash delivered at the point of payment or vesting; or in the case of an award delivered in shares or other instruments, the amount used to acquire the Standard Bank Group shares or other instrument (or the cash equivalent) at the point of vesting and (ii) the value of any notional dividend and/or Notional interest payments, less any employees' tax deducted by the Company.

The trigger events are as follows:

- The discovery of a negative misstatement resulting in an adjustment to the audited accounts of any Group Company in respect of a period for which the performance conditions applicable to an award were assessed; and/or
 - The discovery of the events that occurred prior to award or vesting that have led to the censure of a Group Company by a regulatory authority or have had a significant detrimental impact on the reputation of any Group Company; and/or
 - The discovery of action or conduct of an employee which amounts to gross misconduct that occurred prior to award or vesting; and/or
 - The discovery that any information or the assessment of any performance condition(s) used to determine an award was based on a material error, or inaccurate or misleading information.
4. The REMCO may extend the clawback period if, upon the expiry of the clawback period, there is an ongoing investigation or other procedure being carried on to determine whether the clawback provisions apply in respect of a participant, or the REMCO decides that further investigation is warranted. In such event, the clawback period shall be extended until the investigation or procedure has been completed and the REMCO has made a final determination.
 5. Clawback provisions will only apply to awards granted on or after 1 March 2020. It does not apply to any award with an award date preceding 1 March 2020 (even if the vesting date takes place after 1 March 2020). Clawback provisions will apply only to awards made to individuals classified as Material Risk Takers at the time of award. The clawback provisions will continue to apply to such awards even if the individual is at a future date no longer classified as a Material Risk Taker.

The following principles should be considered when recommending a case for clawback:

- Stanbic IBTC Holdings would like to deal with cases of clawback in a fair and consistent manner across all its operations.
 - Before clawback is triggered, a reduction in the current year's incentive awards and/or forfeiture will be taken into account. A reduction in the current year's incentive awards and/or forfeiture should be applied first before clawback is considered. It is therefore important that the matter and the proposed course of action should be considered holistically and dealt with as one incident as far as possible. This may not be possible if additional facts or information arise at a later stage.
 - Stanbic IBTC Holdings would like to give certainty to the individuals concerned as soon as reasonably possible without compromising the process of a fair investigation and REMCO consideration.
 - When determining whether (i) clawback should apply and (ii) the clawback amount, the extent to which the employee had some level of accountability / responsibility for the trigger event as well as the materiality of the trigger event will be taken into account.
 - When determining the clawback amount, REMCO will consider the extent to which the trigger event resulted in the erroneous calculation of the incentive award.
 - Consideration of the matrix and all role players and their accountabilities will be assessed.
 - An independent investigation should take place when clawback is being considered. In the course of the investigation the employee will be given an opportunity to make representations. Recommendations of investigation should be put forward to REMCO.
 - In the event that the Company's audited accounts require a material restatement – REMCO will refer the matter to the Board. The independent investigation will be conducted by an auditing firm independent of the external auditors who signed off on the relevant accounts in question. REMCO may refer any serious matter to the Board dependent on materiality and/or seniority of the people concerned.
 - Clawback will only be made when all the facts are known, and the independent investigation is concluded.
- Should the clawback investigation not be concluded, the three-year clawback period may be extended until the investigation is complete. Communication to the individual(s) experiencing a delay should indicate that this does not indicate a predetermined outcome but allows for a fair investigation to be concluded.
- All information relating to the investigation and the outcome with regard to clawback should be documented by the relevant Head of People and Culture.

The clawback provisions in this section are in alignment with clauses 16.9 and 16.10 of the Nigerian Code of Corporate governance.

Post-retirement benefits

Pension

Retirement benefits are typically provided on the same basis for employees of all levels and are in line and comply with the Pension Reform Act 2014.

Remuneration as at 30 June 2026

The amounts specified below represent the total remuneration paid to executive and non-executive Directors for the period under review:

	June 2026	June 2025
	₦million	₦million
Fees & sitting allowance	1,331	1,077
Executive compensation	1,544	1,010
Total	2,875	2,087

The Group will continue to ensure its remuneration policies and practices remain competitive, drive performance and are aligned across the Group and with its values.

**Corporate governance report (continued)
for the six month period ended 30 June 2026**

The board Nomination and Governance committee

The board Nomination and Governance Committee is a committee of the Board of Directors ("the board") of the Company and has the responsibility to:

- a) provide oversight on the selection nomination and re-election process for Directors;
- b) provide oversight on the performance of Directors on the various committees established by the board; and
- c) provide oversight in relation to the board evaluation and governance process and the reports that are to be made to the Securities & Exchange Commission, Central Bank of Nigeria and shareholders with respect to same.

The goal of the committee is to review nomination and election and re- election for Directors in such a way as to attract and retain the highest quality Directors whose attributes will ensure that their membership of the board will be of benefit and add value to the bank.

The committee consists of such number of directors as may be approved by the board, but shall not be less than three. In addition, any member of senior management may be invited to attend meetings of the committee.

Composition

As at 30 June 2026 the committee was made up of three non-executive directors appointed by the Board with the Chairman being an Independent Non-Executive Director. The Board Nomination Committee and Governance met two times during the period. Members' attendance at the meetings during the period ended 30 June 2026 is stated below:

Name	January	April
Mrs Ndidi Nwuneli (Chairman)	√	√
Prof Fabian Ajogwu SAN	√	√
Mr Ballama Manu	√	√

The Statutory Audit Committee

The role of the audit committee is defined by the Companies & Allied Matters Act and includes making recommendations to the board on financial matters. These matters include assessing the integrity and effectiveness of accounting, financial, compliance and other control systems. The committee also ensures effective communication between internal auditors, external auditors, the board and management.

The committee's key terms of reference comprise various categories of responsibilities and include the following:

- review the audit plan with the external auditors with specific reference to the proposed audit scope, and approach to risk activities and the audit fee;
- meet with external auditors to discuss the audit findings and consider detailed internal audit reports with the internal auditors;
- annually evaluate the role, independence and effectiveness of the internal audit function in the overall context of the risk management systems;
- review the accounting policies adopted by the Group and all proposed changes in accounting policies and practices;
- consider the adequacy of disclosures;
- review the significant differences of opinion between management and internal audit;
- review the independence and objectivity of the auditors; and
- all such other matters as are reserved to the audit committee by the Companies & Allied Matters Act and the company's Articles of Association.

As required by law, the audit committee members have recent and relevant financial experience.

Composition

As at 30 June 2026, the committee was made up of five members, two of whom are non-executive directors while the remaining three members are shareholders elected at the annual General Meeting (AGM). The committee, whose membership is stated below, is chaired by a shareholder representative.

As at 30 June 2026, the committee consists of the following persons:

Mr. Samuel Ayininuola*	Chairman
Mr. Ibhide George*	Member

The Board IT committee

The board IT committee is one of the committees established by the Board in 2015. The committee has the following responsibilities:

- provide guidance on how IT decisions are made, enforced and evaluated within Stanbic IBTC in accordance with Central Bank of Nigeria (CBN) IT standards blue print;
- assist the Board to fulfil its oversight responsibilities for Stanbic IBTC's investments, operations and strategy in relation to IT;
- review Stanbic IBTC's assessment of risks associated with IT including disaster recovery, business continuity and IT security.

As at 30 June 2026 the Committee consisted of four members three of who are Non-Executive Directors. In addition, any member of senior management may be invited to attend meetings of the committee.

Members' attendance at the Board IT Committee meetings for the period 01 January to 30 June 2026 is stated below:

Name	January	April
Mrs Nkemdilim Uwaje-Begho (Chairman)	√	√
Mr Chuma Nwokocha	√	√
Mr Kunle Adedeji	√	√
Dr Babs Omotowa	√	√
Mrs Maryam Aliko Mohammed	√	√

√ = Present

The Board Legal Committee

The committee's key terms of reference comprise various categories of responsibilities and include the following:

- reviewing the legal risks and other legal issues facing Stanbic IBTC and its subsidiaries and for discussing appropriate strategies to address the risk arising from the litigation portfolios of Stanbic IBTC and its subsidiaries (the Litigation Portfolio).
- review and assess the likely success of the individual matters included in the Litigation Portfolio and of any threatened litigation and where necessary shall recommend that Management seek appropriate out-of-court settlement of specific matters

Composition

The committee is made up of at least two non-executive Directors and one executive director appointed by the Board.

Members' attendance at the Board Legal Committee meetings for the year 01 January to 30 June 2026 is stated below:

The Board Investment Committee

The Board Investment Committee was constituted at the 02 August 2024 Board meeting in compliance with the Central Bank of Nigeria Corporate Governance Guidelines for Financial Holding Companies in Nigeria

The committee's key terms of reference comprise various categories of responsibilities and include the following:

- ensure that investment decisions align with corporate objectives, strategy risk profile and applicable regulations
- consider and recommend to the Board for approval, all capital and investment proposals relating to the Company
- consider and recommend to the Board for approval all significant acquisitions, mergers, takeovers, divestment of operating companies, equity investments and strategic alliances by the Company or its subsidiaries
- review and recommend to the Board all new business initiatives, particularly those requiring significant capital investment
- review and recommend to the Board all investment-related policies
- undertake all other investment-related functions as the Board may from time to time determine

Composition

As at 30 June 2026, the committee was made up of three members, two of whom are non-executive directors while the other member is an executive director. The committee, whose membership is stated below is chaired by a non-executive director.

Members' attendance at the Board Investment Committee meetings for the period 01 January to 30 June 2026 is stated below:

Name	January	April
Mr Ballama Manu (Chairman)	√	√
Mr Kunle Adedeji	√	√

Company secretary

It is the role of the Company secretary to ensure that the board remains cognisant of its duties and responsibilities. In addition to providing the board with guidance on its responsibilities, the Company secretary keeps the board abreast of relevant changes in legislation and governance best practices. The Company secretary oversees the induction of new Directors, including subsidiary Directors, as well as the ongoing training of Directors. All Directors have access to the services of the Company secretary.

Going concern

On the recommendation of the audit committee, the board annually considers and assesses the going concern basis for the preparation of the financial statements at the year end.

The board continues to view the Company as a going concern for the foreseeable future.

Management committees

The Group has the following management committees:

- Executive Committee (Exco)
- Equity Investment Committee
- Information Strategy & Data Governance Committee
- Operational Risk and Compliance Committee
- Change Management Committee
- Risk Committee
- Internal Financial Control Committee

Relationship with shareholders

As an indication of its fundamental responsibility to create shareholder value, effective and ongoing communication with shareholders is seen as essential. In addition to the ongoing engagement facilitated by the Company secretary and the head of investor relations, the Company encourages shareholders to attend the annual general meeting and other shareholder meetings where interaction is welcomed. The chairman of the Company's audit committee is available at the meeting to respond to questions from shareholders.

Voting at general meetings is conducted either through a show of hands or a poll depending on the subject matter of the resolution on which a vote is being cast and separate resolutions are proposed on each significant issue.

Dealing in securities

In line with its commitment to conduct business professionally and ethically, the Company has introduced policies to restrict the dealing in securities by Directors, shareholder representatives on the audit committee and embargoed employees. A personal account trading policy is in place to prohibit employees and Directors from trading in securities during close periods. Compliance with this policy is monitored on an ongoing basis.

STANBIC IBTC HOLDINGS PLC

Corporate governance report (continued) for the six month period ended 30 June 2026

Sustainability

The Company as a member of the Standard Bank Group (SBG) is committed to conducting business professionally, ethically, with integrity and in accordance with international best practice. To this end, the Company subscribes to and adopts risk management standards, policies and procedures that have been adopted by the SBG. The Company is also bound by the Nigerian Stock Exchange Sustainability Disclosure Guidelines and the Nigerian Sustainable Banking Principles and the provisions of these frameworks are incorporated into policies approved by the Board.

SBG's risk management standards, policies and procedures have been amended to be more reflective of the Nigerian business and regulatory environment. All such amendments to the risk management standards, policies and procedures have been agreed to by Standard Bank Africa (SBAF) Risk Management.

The Group is committed to contributing to sustainable development through ethical, responsible financing and business practices which unlocks value for our stakeholders. We manage the environmental and social aspects that impact our activities, products and services whilst ensuring sustainable value creation for our customers. We are passionately committed to encouraging financial inclusion through the provision of banking and other financial services to all cadres of the society and a promoter of gender equality.

Social responsibility

As an African business, the Group understands the challenges and benefits of doing business in Africa, and owes its existence to the people and societies within which it operates.

The Group is therefore committed not only to the promotion of economic development but also to the strengthening of civil society and human well being.

The Group is concentrating its social investment expenditure in defined focus area which currently include education in order to make the greatest impact. These areas of focus will be subject to annual revision as the country socio-economic needs change.

Ethics and organisational integrity

The board aims to provide effective and ethical leadership and ensures that its conduct and that of management is aligned to the organization's values and code of ethics. The board subscribes to the SBG Group's values and enables decision making at all levels of the business according to defined ethical principles and values.

Compliance with the Nigerian Stock Exchange's listing rule

Stanbic IBTC Holdings PLC ("SIBTC") has adopted a Personal Account Trading Policy ("PATP") for both employees and Directors which incorporates a code of conduct regarding securities transactions by Directors and employees. The PATP was circulated to all employees who in the course of the year had any insider or material information about SIBTC; it is also published in the Company's internal communication on a regular basis and also hoisted on the Company's website.

For the period ended 30 June 2026, the Company confirm that all Directors, complied with the PATP regarding their SIBTC securities transacted on their account during the year.

Compliance with the Securities and Exchange Commission's code of corporate governance

As a public company, Stanbic IBTC Holdings PLC confirms that as at 30 June 2026 the Company has complied with the principles set out in the Securities and Exchange Commission's Guidelines on Corporate Governance (the Guidelines).

The Company applies the Guidelines's principles of transparency, integrity and accountability through its own behaviour, corporate governance best practice and by adopting, as appropriate and proportionate for a Company of its size and nature. The policies and procedures adopted by the Board and applicable to the Company's businesses are documented in mandates, which also set out the roles and delegated authorities applying to the Board, Board Committees, and the Executive Committee.

Compliance with the Central Bank of Nigeria Corporate Governance Guidelines for Financial Holding Companies in Nigeria

As a financial holding company, Stanbic IBTC Holdings PLC is primarily regulated by the Central Bank of Nigeria ("CBN"). In this regard, compliance with the CBN Corporate Governance Guidelines for Financial Holding Companies in Nigeria, as well as all regulations issued by the CBN for Financial Holding Companies remain an essential characteristic of its culture. We confirm that as at the period ended 30 June 2026 the company has complied in all material respects with the principles set out in the CBN's Corporate Governance Guidelines.

Compliance with the Central Bank of Nigeria Whistleblowing Guidelines

In accordance with clause 4.11 of the CBN Guidelines for Whistleblowing, Stanbic IBTC Holdings PLC and its subsidiaries have complied in all material respects with the principles set out in the Whistleblowing Guidelines, as at year end.

Complaints Management Policy

Stanbic IBTC Holdings PLC has a Complaints Management Policy in place in compliance with the Securities & Exchange Commission rule which became effective in February 2015. Shareholders may have access to this policy via any of the following options:

- By accessing same through our website
<http://www.stanbicibtc.com/nigeriaGroup/AboutUs/Code-of-Ethics>
- By requesting for a copy through the office of the Company Secretary

Disclosure on diversity in employment

The Group is an equal opportunity employer that is committed to maintaining a positive work environment that facilitates high level of professional efficiency at all times. The Group's policy prohibits discrimination of gender, disabled persons or persons with HIV in the recruitment, training and career development of its employees.

i) Persons with disability:

The Group continues to maintain a policy of giving fair consideration to applications for employment made by disabled persons with due regard to their abilities and aptitude.

ii) Gender diversity within the Group

**Certification by Chief Executive and Chief Financial Officer
for the six month period ended 30 June 2026**

Certification Under Section 405 (1) of the Companies and Allied Matters Act 2020

We the undersigned hereby certify the following with regards to our audited financial statements (AFS) for the period ended 30 June 2026 that:

1. We have reviewed the AFS and to the best of our knowledge:
 - i. the AFS do not contain any untrue statement of material facts or omit to state a material fact, which would make the statements misleading, in the light of the circumstances under which such statement was made, and
 - ii. the AFS and all other financial information included in the statements fairly present, in all material respects, the financial condition and results of operation of the Company as of and for, the periods covered by the AFS;
2. We are responsible for establishing and maintaining internal controls and has designed such internal controls to ensure that material information relating to the Company and its subsidiaries is made known to the officer by other officers of the companies, particularly during the year in which the audited financial statement report is being prepared;
3. We have evaluated the effectiveness of the Company's internal controls within 90 days before the date of AFS, and certify that the Company's internal controls are effective as of that date;
4. We have disclosed to the Company's auditors and audit committee –
 - i. there are no significant deficiencies in the design or operation of internal controls which could adversely affect the Company's ability to record, process, summarise and report financial data, and we have not identified for the Company's auditors any material weaknesses in internal controls, and
 - ii. there was no fraud whether or not, material that involves management or other employees who have a significant role in the Company's internal control.
5. There were no significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of their evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.

Chuma Nwokocho
Chief Executive

**Report of the audit committee
for the six month period ended 30 June 2026**

To the members of Stanbic IBTC Holdings PLC

In compliance with the provisions of Section 404 of the Companies & Allied Matters Act 2020, the Audit Committee considered the audited consolidated and separate financial statements for the period ended 30 June 2026 together with the management controls report from the auditors and the Company's response to this report at its meeting held on 29 July 2026.

In our opinion, the scope and planning of the audit for the period ended 30 June 2026 were adequate.

We have exercised our statutory functions under Section 404 (7) of the Companies and Allied Matters Act of Nigeria and acknowledge the co-operation of management and staff in the conduct of these responsibilities.

We are of the opinion that the accounting and reporting policies of the Company and the Group are in accordance with legal requirements and agreed ethical practices, and that the scope and planning of both the external and internal audits for the period ended 30 June 2026 were satisfactory and reinforce the Group's internal control systems.

After due consideration, the Audit Committee accepted the report of the Auditors that the financial statements were in accordance with ethical practice and International Financial Reporting Standards.

The Committee reviewed Management's response to the auditors findings in respect of management matters and we are satisfied with management's response thereto.

We are satisfied that the Company has complied with the provisions of Central Bank of Nigeria circular BSD/1/2004 dated 18 February 2004 on "Disclosure of insider related credits in the financial statements of banks", as contained in note 39 of the financial statement.

The Committee also approved the provision made in the consolidated and separate financial statements in relation to the remuneration of the auditors.

Mr. Samuel Ayininuola

Chairman, Audit Committee

Independent Auditor's Report

To the Members of Stanbic IBTC Holdings Plc

Report on the Audit of the Interim Consolidated and Separate Financial Statements

Opinion

We have audited the Interim consolidated and separate financial statements of Stanbic IBTC Holdings Plc ("the Company") and its subsidiaries (together "the Group"), which comprise the consolidated and separate statements of financial position as at 30 June 2026, and the consolidated and separate statements of profit or loss, the consolidated and separate statements of other comprehensive income, the consolidated and separate statements of changes in equity and the consolidated and separate statements of cash flows for the six month period ended, and notes to the Interim consolidated and separate financial statements, including material accounting policy information.

In our opinion, the accompanying Interim consolidated and separate financial statements give a true and fair view of the consolidated and separate financial position of the Group and the Company as at 30 June 2026, and its consolidated and separate financial performance and consolidated and separate cash flows for the period then ended in accordance with IFRS Accounting Standards as issued by the International Accounting Standards Board, the provisions of the Companies and Allied Matters Act, 2020 Banks and Other Financial Institutions Act 2020 and in compliance with the Financial Reporting Council of Nigeria (Amendment) Act, 2023 and relevant Central Bank of Nigeria Circulars.

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the Interim Consolidated and Separate Financial Statements* section of our report. We are independent of the Group and the Company in accordance with the International Ethics Standards Board for Accountants' International Code of Ethics for Professional Accountants (including International Independence Standards) (IESBA Code) together with the ethical requirements that are relevant to our audit of the Interim Consolidated and separate financial statements in Nigeria, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the IESBA Code. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key Audit Matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the Interim Consolidated and separate financial statements of the current period. These matters were addressed in the context of our audit of the Interim consolidated and separate financial statements as a whole, and in forming our opinion thereon, we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the Auditor's Responsibilities for the Audit of the Interim Consolidated and Separate Financial Statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the Interim consolidated and separate financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying Interim consolidated and separate financial statements.

The Key Audit Matters applies equally to the audit of the Interim consolidated and separate financial statements.

Key Audit Matters	How the matter was addressed in the audit
Expected Credit Loss (ECL) allowance on loans and advances to customers As at 30 June 2026, the Group and Bank reported gross loans and advances to customers of ₦2.67 trillion (31 December 2025: ₦2.46 trillion) and an expected credit loss (ECL) allowance of ₦87.99 billion was recognised (31	With the support of our credit risk specialists, we performed the following procedures over the ECL allowance for the Commercial and Investment Banking (including Corporate and Transactional Banking), Personal and Private Banking, and Business and Commercial Banking portfolios:

December 2025: ¥84.20 billion).

The determination of ECL requires significant judgement and estimation, particularly in:

- Assessing whether a significant increase in credit risk (SICR) has occurred and determining the appropriate stage classification of exposures.
- Estimating key ECL parameters, including probability of default (PD), loss given default (LGD), exposure at default (EAD), credit conversion factors and behavioural life assumptions.
- Incorporating forward-looking macroeconomic information and assigning probability weightings to economic scenarios.
- Evaluating the need for management overlays to address risks not fully captured by the models.
- Estimating recoveries and collateral values for credit-impaired (Stage 3) exposures.

For the Commercial and Investment Banking (CIB) portfolio, ECL was particularly sensitive to large counterparty exposures, internal credit rating movements and stage migrations. For the Personal and Private Banking (PPB) and Business and Commercial Banking (BCB) portfolios, key areas of judgement included behavioural life assumptions, LGD methodology, SICR assessment and macroeconomic scenario weighting.

Given the size of the loan portfolio and the significant judgement involved in estimating ECL, we considered the ECL allowance on loans and advances to customers to be a key audit matter.

See the following notes to the financial statements for further information:

Note 12 - Loans and advances

Note 6.1- Credit impairment losses on loans and advances.

- Obtained an understanding of management's ECL methodology, including the data sources, models, assumptions and key judgements applied in determining the ECL allowance.
- Evaluated and tested the design and operating effectiveness of key automated and manual controls relevant to the ECL allowances on loans and advances to customers.
- Assessed the appropriateness of key credit risk parameters and assumptions, including staging, SICR, PD, LGD, EAD, behavioural life and forward-looking information.
- Analysed movements in exposures, ECL allowances, coverage ratios, internal credit ratings and stage allocations between 31 December 2025 and 30 June 2026, including significant migrations between stages and material customer-level movements.
- Evaluated management overlays to the ECL allowance by assessing the rationale for the adjustments, challenging the assumptions and judgements applied by management, considering whether the identified risks were adequately reflected in the underlying ECL models, and assessing the reasonableness of the resulting impact on the ECL allowance.
- Evaluated the reasonableness of management's forward-looking economic assumptions and scenario weightings used in the ECL models and assessed their impact on stage allocations, probability of default estimates and the resulting ECL allowance.
- For credit-impaired (Stage 3) exposures, inspected credit files and evaluated management's assessment of expected future cash flows, including expected recoveries, collateral realization values, timing of recoveries and other relevant assumptions used in determining the lifetime expected credit loss allowance.
- For selected material loan balances, we inspected underlying credit files and supporting documentation to assess the appropriateness of the assigned credit

	risk ratings, staging classifications, and the resulting ECL allowances. - Performed sensitivity analyses over key ECL assumptions and estimates, including staging, probability of default (PD), loss given default (LGD), behavioural life assumptions and macroeconomic scenario weightings, to assess the reasonableness of the recorded ECL allowance - Assessed whether the related disclosures were consistent with the requirements of IFRS 7 and IFRS 9.
Valuation of insurance contract liabilities The Group has insurance contract liabilities of N83.38billion (2025: N72.42billion). Actuarial valuation of these insurance contract liabilities is an area that involves significant judgment over uncertain future outcomes and therefore was an area of significance to our audit. The Group reviews its unexpired risk at reporting date. Provision for reported claims is based on historical experience; however, the eventual liabilities may differ from the estimated amounts. Furthermore, the estimated liabilities for claims that have occurred but are yet to be reported involve judgment and economic assumptions. The complexity of the valuation models may give rise to errors as a result of inadequate/incomplete data or the design or application of the models. See the following note to the financial statements for further information: Note 4.14 - Insurance Operations Note 28.3 - Insurance Contract Liabilities.	With the support of our actuarial specialists, we performed the following procedures over Insurance Contract Liabilities: - obtained and documented our understanding of the Group's basis of valuation. - tested the completeness and accuracy of the subledgers by agreeing the schedules to the general ledger. - Performed sample testing over key data inputs used in the valuation of insurance contract liabilities, agreeing selected premium and claims data elements to underlying source records to assess their completeness and accuracy. - independently assessed the key assumptions used in the valuation of insurance contract liabilities, including claims development patterns, expense assumptions, lapse assumptions and discount rate, by comparing them to historical experience, industry benchmarks and available market data. - checked the accuracy of contract classifications for reporting under IFRS 17 Insurance Contracts. - evaluated the appropriateness of disclosures made in the financial statements as regards insurance contract.

Other Matter

The consolidated and separate financial statements of Stanbic IBTC Bank Ltd ("the Company") and its subsidiary (together, "the Group") for the year ended 31 December 2025 were audited by another auditor, who expressed an unmodified opinion on those financial statements on 17 April 2026.

Other Information

The Directors are responsible for the other information. The other information comprises the information included in the document titled “Stanbic IBTC Holdings Plc Interim Consolidated and Separate Financial Statements for the period ended 30 June 2026”, which includes the Directors' report, Statement of Directors' responsibilities in relation to the financial statements, Corporate Governance report, Certification by Chief Executive and Chief Financial Officer, Report of the audit committee, Other National Disclosures, Details of professionals who provided services to the financial statements and List of agents. The other information does not include the Interim consolidated and separate financial statements and our auditor's report thereon.

Our opinion on the Interim consolidated and separate financial statements does not cover the other information and we do not express an audit opinion or any form of assurance conclusion thereon.

In connection with our audit of the Interim consolidated and separate financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the Interim consolidated and separate financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed on the other information obtained prior to the date of this auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Directors for the Interim Consolidated and Separate Financial Statements

The Directors are responsible for the preparation and fair presentation of the Interim consolidated and separate financial statements in accordance with IFRS Accounting Standards as issued by the International Accounting Standards Board, the provisions of the Companies and Allied Matters Act, 2020 Banks and Other Financial Institutions Act 2020 and in compliance with the Financial Reporting Council of Nigeria (Amendment) Act, 2023 and relevant Central Bank of Nigeria Circulars and for such internal control as the Directors determine is necessary to enable the preparation of Interim Consolidated and separate financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the Interim consolidated and separate financial statements, the Directors are responsible for assessing the Group's and the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Directors either intend to liquidate the Group and/or the Company or to cease operations, or have no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Interim Consolidated and Separate Financial Statements

Our objectives are to obtain reasonable assurance about whether the Interim consolidated and separate financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Interim consolidated and separate financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Interim consolidated and separate financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Directors.
- Conclude on the appropriateness of the Directors' use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Interim Consolidated and separate financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group and/or the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the Interim Consolidated and separate financial statements, including the disclosures, and whether the Interim Consolidated and separate financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with the Directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

From the matters communicated with the Directors, we determine those matters that were of most significance in the audit of the Interim Consolidated and separate financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

In accordance with the requirement of the Fifth Schedule of the Companies and Allied Matters Act, 2020, we confirm that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;
- In our opinion, proper books of account have been kept by the Group and Company, in so far as it appears from our examination of those books;

- The consolidated and separate statements of financial position and the consolidated and separate statements of profit or loss and consolidated and separate statements of other comprehensive income are in agreement with the books of account; and
- In our opinion, the Interim consolidated and separate financial statements have been prepared in accordance with the provisions of the Companies and Allied Matters Act, 2020 so as to give a true and fair view of the state of affairs and financial performance of the Company and its subsidiaries.

In compliance with the Banks and Other Financial Institutions Act and circulars issued by the Central Bank of Nigeria:

- The information required by the Central Bank of Nigeria Circular BSD/1/2004 on insider related credits is disclosed in Note 39 to the interim consolidated and separate financial statements.
- As disclosed in Note 42 to the interim consolidated and separate financial statements, the Group contravened certain circulars of the Central Bank of Nigeria.

Cash and cash equivalents at beginning of the period		2,101,820	1,834,073	34,673	7,867
Cash and cash equivalents at end of the period	37.3	1,387,730	2,127,012	71,908	25,231

The accompanying notes from page 7 to 147 form an integral part of these financial statements

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

1 Reporting entity

Stanbic IBTC Holdings PLC (the 'Company') is a company domiciled in Nigeria. The company's registered office is at I.B.T.C. Place Walter Carrington Crescent Victoria Island, Lagos, Nigeria. These consolidated financial statements comprise the company and its subsidiaries (together referred to as the 'Group'). The separate financial statement relates to Stanbic IBTC Holdings PLC. The Group is primarily involved in the provision of banking and other financial services to corporate and individual customers.

2 Basis of preparation

(a) Statement of compliance

The interim consolidated and separate financial statements for the period ended 30 June 2026 have been prepared in accordance with international financial reporting standards (IFRS Accounting Standards) as issued by the International Accounting Standards Board (IASB). The financial statements comply with the Companies and Allied Matters Act of Nigeria 2020, Bank and Other Financial Institution Act 2020, Financial Reporting Council of Nigeria (Amendment) Act, 2023, and relevant Central Bank of Nigeria circulars.

Securities Trading Policy

In compliance with Rule 17.15 Disclosure of Dealings in Issuers' Shares, Rulebook of The Exchange 2015 (Issuers' Rule), Stanbic IBTC Holdings PLC maintains a Security Trading Policy (Policy) which guides Directors, Audit Committee members, employees and all individuals categorized as insiders in relation to their dealings in the Company's shares. The Policy undergoes periodic review by the Board and is updated accordingly. The Company has made specific inquiries of all its directors and other insiders and is not aware of any infringement of the Policy during the period.

The interim consolidated and separate financial statements for the period ended 30 June 2026 was approved and authorised for issue by the Board of Directors on 31 July 2026.

(b) Basis of measurement

These interim consolidated and separate financial statements for the period ended 30 June 2026 have been prepared on the historical cost basis except for the following material items in the statement of financial position:

- derivative financial instruments are measured at fair value
- financial instruments at fair value through profit or loss are measured at fair value
- certain financial assets are measured at fair value through other comprehensive income
- liabilities for cash-settled share-based payment arrangements are measured at fair value
- trading assets and liabilities are measured at fair value

The Group applies accrual accounting for recognition of its income and expenses.

(c) Going concern assumption

These interim consolidated and separate financial statements have been prepared on the basis that the Group and Company will continue to operate as a going concern.

(d) Functional and presentation currency

These consolidated and separate financial statements are presented in Nigerian Naira, which is the Company and its subsidiaries functional and presentation currency. All financial information presented in Naira has been rounded to the nearest million, except when otherwise stated.

(e) Use of estimates and judgement

The preparation of the consolidated and separate financial statements in conformity with IFRS requires management to make judgements, estimates and assumptions that affect the application of accounting policies and the reported amount of assets, liabilities, income and expenses. Actual results may differ from these estimates.

Judgements

Information about judgements made in applying accounting policies that have the most significant effects on the amounts recognised in the consolidated interim financial statements is included in the note below;

- Note 6.9 Depreciation and useful life of property and equipment
- Impairment of financial instruments: assessment of whether credit risk on the financial asset has increased significantly since initial recognition.
- Assessment of significance of insurance risk: The insurance subsidiary applies its judgement in assessing whether a contract transfers to the issuer significant insurance risk. A contract transfers significant insurance risk only if an insured event could cause the Company to pay additional amounts that are significant in any single scenario and only if there is a scenario that has commercial substance in which the issuer has a possibility of a loss on a present value basis upon an occurrence of the insured event, regardless of whether the insured event is extremely unlikely. The assessment of whether additional amounts payable on the occurrence of an insured event are significant and whether there is any scenario with commercial substance in which the issuer has a possibility of a loss on a present value basis involves significant judgement and is performed at initial recognition on a contract-by-contract basis. The type of contracts where this judgement is required are those that transfer financial and insurance risk and result in the latter being the smaller benefit provided. The application of judgement in this area is aided by the Company's processes to filter contracts where the additional amounts referred to above are more than 5% but less than 10% of the amounts paid if the insured event does not occur. Additional amounts that are less than 5% are considered by the Company as insignificant. A specialist unit conducts all these judgemental classifications under IFRS 17 to maintain consistency across the Company. This assessment is performed after the separation of non-closely related derivatives, distinct investment components and promises to transfer distinct goods and non-insurance services.
- Classification of financial assets: assessment of the business model within which the assets are held and assessment of whether the contractual terms of the financial asset are solely payments of principal and interest on the principal amount outstanding.
- Determination of whether the Group controls investment funds where it act as fund manager (see note 6.8).
- Provision for contingent items such as legal claims, fines, penalties and other tax penalties. (see note 6.7).
- Determination of the fair value of financial instruments with significant unobservable inputs (see note 6.3).
- Recognition and measurement of provisions and contingencies: key assumptions about the likelihood and magnitude of an outflow of resources (see notes 27 & 32).

Assumptions and estimation uncertainties

Information about assumptions and estimation uncertainties that have a significant risk of resulting in a material adjustment in the period ended 30 June 2026 is included in the following notes.

- Determination of the fair value of financial instruments with significant unobservable inputs (see note 6.3).
- Determination of the fair value of share-based payments (see note 6.4).
- Impairment of financial instruments: incorporation of forward-looking information in the measurement of ECL.
- Recognition of deferred tax assets: availability of future taxable profit against which carry-forward tax losses can be used (see note 16) as well as the likelihood and uncertainties of the extension of the tax exempt status of income on Government securities which we have assumed to be highly likely. Included in the recoverability review of deferred tax assets is assumptions about interest rates, exchange rates, inflation rate.
- Assessment of significance of insurance risk: The Company applies its judgement in assessing whether a contract transfers to the issuer significant insurance risk. A contract transfers significant insurance risk only if an insured event could cause the Company to pay additional amounts that are significant in any single scenario and only if there is a scenario that has commercial substance in which the issuer has a possibility of a loss on a present value basis upon an occurrence of the insured event, regardless of whether the insured event is extremely unlikely. The assessment of whether additional amounts payable on the occurrence of an insured event are significant and whether there is any scenario with commercial substance in which the issuer has a possibility of a loss on a present value basis involves significant judgement and is performed at initial recognition on a contract-by-contract basis. The type of contracts where this judgement is required are those that transfer financial and insurance risk and result in the latter being the smaller benefit provided. The application of judgement in this area is aided by the Company's processes to filter contracts where the additional amounts referred to above are more than 5% but less than 10% of the amounts paid if the insured event does not occur. Additional amounts that are less than 5% are considered by the Company as insignificant. A specialist unit conducts all these judgemental classifications under IFRS 17 to maintain consistency across the Company. This assessment is performed after the separation of non-closely related derivatives, distinct investment components and promises to transfer distinct goods and non-insurance services.

3 Changes in accounting policies

Except as described below, the Group has consistently applied the accounting policies as set out in Note 4 to all periods presented in these financial statements.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

3 Changes in material accounting policies (continued)

Adoption of amended standards effective for the current financial year

Amendments to the Classification and Measurement of Financial Instruments – Amendments to IFRS 9 Financial Instruments and IFRS 7 Financial Instruments: Disclosures: The amendment settling financial liabilities using an electronic payment system; and assessing contractual cash flow characteristics of financial assets, including those with environmental, social and governance (ESG)-linked features. The amendments will be applied retrospectively. The adoption of this standard did not affect the group's previously reported financial results significantly, disclosures or accounting policies and did not impact the group's results materially upon transition.

Contract Referencing Nature-dependent Electricity - Amendment to IFRS 9 and IFRS 7: The amendment provide guidance on the use of the use of exemption for the purchasers of electricity under power purchase agreements (PPAs) and hedge accounting requirements for entity that hedge their purchases or sales of electricity using PPAs. The adoption of this standard did not affect the group's previously reported financial results significantly, disclosures or accounting policies and did not impact the group's results materially upon transition.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies

Except for the changes explained in note 3, the Group has consistently applied the following accounting policies to all periods presented in these consolidated and separate interim financial statements.

4.1 Basis of consolidation

Subsidiaries (including mutual funds, in which the Group has both an irrevocable asset management agreement and a significant investment)

Separate financial statements

Investments in subsidiaries are accounted for at cost less accumulated impairment losses (where applicable) in the separate financial statements. The carrying amounts of these investments are reviewed annually for impairment indicators and, where an indicator of impairment exists, are impaired to the higher of the investment's fair value less costs to sell or value in use.

Consolidated financial statements

The accounting policies of subsidiaries that are consolidated by the Group conform to the Group's accounting policies. IntraGroup transactions, balances and unrealised gains/(losses) are eliminated on consolidation. Unrealised losses are eliminated in the same manner as unrealised gains, but only to the extent that there is no evidence of impairment. The proportion of comprehensive income and changes in equity allocated to the Group and non-controlling interest are determined on the basis of the Group's present ownership interest in the subsidiary.

Acquisitions	Subsidiaries are entities controlled by the Group and are consolidated from the date on which the Group acquires control up to the date that control is lost. The Group controls an entity if it is exposed to, or has the rights to variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity. Control is assessed on a continuous basis. For mutual funds the Group further assesses its control by considering the existence of either voting rights or significant economic power. The acquisition method of accounting is used to account for the acquisition of subsidiaries by the Group. The consideration transferred is measured as the sum of the fair value of the assets given, equity instruments issued and liabilities incurred or assumed at the acquisition date. The consideration includes any asset, liability or equity resulting from a contingent consideration arrangement. The obligation to pay contingent consideration is classified as either a liability or equity based on the terms of the arrangement. The right to a return of previously transferred consideration is classified as an asset. Transaction costs are recognised within profit or loss as and when they are incurred. Where the initial accounting is incomplete by the end of the reporting year in which the business combination occurs (but no later than 12 months since the acquisition date), the Group reports provisional amounts.
---------------------	---

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Acquisitions (continued)	Where applicable, the Group adjusts retrospectively the provisional amounts to reflect new information obtained about facts and circumstances that existed at the acquisition date and affected the measurement of the provisional amounts. Identifiable assets acquired, liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date, irrespective of the extent of any NCI. The excess (shortage) of the sum of the consideration transferred (including contingent consideration), the value of NCI recognised and the acquisition date fair value of any previously held equity interest in the subsidiary over the fair value of identifiable net assets acquired is recorded as goodwill in the statement of financial position (gain on bargain purchase, which is recognised directly in profit or loss). When a business combination occurs in stages, the previously held equity interest is remeasured to fair value at the acquisition date and any resulting gain or loss is recognised in profit or loss. Increases in the Group's interest in a subsidiary, when the Group already has control, are accounted for as transactions with equity holders of the Group. The difference between the purchase consideration and the Group's proportionate share of the subsidiary's additional net asset value acquired is accounted for directly in equity.
Loss of control in a subsidiary	When the Group loses control of a subsidiary, the Group derecognizes the assets and liabilities of the subsidiary, any related non controlling interest and the other components of equity relating to the subsidiary. Any surplus or deficit arising on the loss of control is recognized in the profit or loss statement. If the loss of control is due to a disposal, the profit or loss on disposal is calculated as the difference between the fair value of the consideration received (including the fair value of any retained interest in the underlying investee) and the carrying amount of the assets and liabilities and any non-controlling interest. Any gains or losses in OCI that relate to the subsidiary are reclassified to profit or loss at the time of the disposal. On disposal of a subsidiary that includes a foreign operation, the relevant amount in the FCTR is reclassified to profit or loss at the time at which the profit or loss on disposal of the foreign operation is recognised. Upon loss of control, the Group recognises any investment retained in the former subsidiary and subsequently accounts for it and for any amounts owed by or to the former subsidiary in accordance with relevant IFRSs.
Partial disposal of a subsidiary	A partial disposal arises as a result of a reduction in the Group's ownership interest in an investee that is not a disposal (i.e. a reduction in the Group's interest in a subsidiary whilst retaining control). Decreases in the Group's interest in a subsidiary, where the Group retains control, are accounted for as transactions with equity holders of the Group. Gains or losses on the partial disposal of the Group's interest in a subsidiary are computed as the difference between the sales consideration and the Group's proportionate share of the investee's net asset value disposed of, and are accounted for directly in equity.
Initial measurement of NCI	The Group elects on each acquisition to initially measure NCI on the acquisition date at either fair value or at the NCI's proportionate share of the investees' identifiable net assets.

Common control transactions

Common control transactions, in which the company is the ultimate parent entity both before and after the transaction, are accounted for at book value.

Foreign currency translations

Foreign currency transactions are translated into the respective Group entities' functional currencies at exchange rates prevailing at the date of the transactions.

Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies at year-end exchange rates, are recognised in profit or loss.

Non-monetary assets and liabilities denominated in foreign currencies that are measured at historical cost are translated using the exchange rate at the transaction date, and those measured at fair value are translated at the exchange rate at the date that the fair value was determined. Foreign exchange rate differences on non-monetary items are accounted for based on the classification of the underlying items.

In the case of foreign currency gains and losses on debt instruments classified as FVOCI, a distinction is made between foreign currency differences resulting from changes in amortised cost of the security and other changes in the carrying amount of the security. Foreign currency differences related to changes in the amortised cost are recognised in profit or loss, and other changes in the carrying amount, are recognised in equity. For FVOCI equity investments, foreign currency differences are recognised in OCI and cannot be reclassified to profit/loss.

Foreign currency gains and losses on intraGroup loans are recognised in profit or loss except where the settlement of the loan is neither planned nor likely to occur in the foreseeable future.

4.2 Cash and cash equivalents

Cash and cash equivalents presented in the statement of cash flows consist of cash and balances with central banks (excluding cash reserve), and balances with other banks with original maturities of 3 months or less from the date of acquisition that are subject to an insignificant risk of changes in their fair values and are used by management to fulfill short term commitments. Cash and balances with central banks comprise coins and bank notes, balances with central banks and other short term investments.

4 Statement of material accounting policies (continued)

4.3 Financial instruments

The relevant financial instruments are financial assets classified at amortised cost, fair value through OCI, fair value through P/L and financial liabilities.

**Recognition and initial measurement – financial instruments**

All financial instruments are measured initially at fair value plus directly attributable transaction costs and fees, except for those financial instruments that are subsequently measured at fair value through profit or loss where such transaction costs and fees are immediately recognised in profit or loss. Financial instruments are recognised (derecognised) on the date the Group commits to purchase (sell) the instruments (trade date accounting).

Financial assets

Amortised cost	A debt instrument that meets both of the following conditions (other than those designated at fair value through profit or loss): • held within a business model whose objective is to hold the debt instrument (financial asset) in order to collect contractual cash flows; and • The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. This assessment includes determining the objective of holding the asset and whether the contractual cash flows are consistent with a basic lending arrangement. Where the contractual terms introduce exposure to risk or volatility that are not considered de minimis and are inconsistent with a basis lending arrangement, the financial asset is classified as fair value through profit or loss – default.	
Fair value through OCI	Includes: • A debt instrument that meets both of the following conditions (other than those designated at fair value through profit or loss): — held within a business model in which the debt instrument (financial asset) is managed to both collect contractual cash flows and sell financial assets; and — the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. This assessment includes determining the objective of holding the asset and whether the contractual cash flows are consistent with a basic lending arrangement. Where the contractual terms introduce exposure to risk or volatility that are not considered de minimis and are inconsistent with a basis lending arrangement, the financial asset is classified as fair value through profit or loss – default. • Equity financial assets which are not held for trading and are irrevocably elected (on an instrument-by-instrument basis) to be presented at fair value through OCI.	
Fair value through PL	Held for trading	Those financial assets acquired principally for the purpose of selling in the near term, those that form part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit taking.
	Designated at fair value through profit or loss	Financial assets are designated to be measured at fair value in the following instances: - to eliminate or significantly reduce an accounting mismatch that would otherwise arise - where the financial assets are managed and their performance evaluated and reported on a fair value basis - where the financial asset contains one or more embedded derivatives that significantly modify the financial asset's cash flows.
	Fair value through profit or loss default	Financial assets that are not classified into one of the above-mentioned financial asset categories.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Subsequent measurement

Subsequent to initial measurement, financial assets are classified in their respective categories and measured at either amortised cost or fair value as follows:

Amortised cost	Amortised cost using the effective interest method with interest recognised in interest income, less any impairment losses which are recognised as part of credit impairment charges. Directly attributable transaction costs and fees received are capitalised and amortised through interest income as part of the effective interest rate.	
Fair value through OCI	Debt instrument: Fair value, with gains and losses recognised directly in the fair value through OCI reserve. When a debt financial asset is disposed of, the cumulative fair value adjustments, previously recognised in OCI, are reclassified to the other gains and losses on financial instruments within non-interest revenue. Interest income on debt financial asset is recognised in interest income in terms of the effective interest rate method. Dividends received are recognised in interest income within profit or loss. Equity instrument: Fair value, with gains and losses recognised directly in the fair value through OCI reserve. When equity financial assets are disposed of, the cumulative fair value adjustments in OCI are reclassified within reserves to retained earnings. Dividends received on equity instruments are recognised in other revenue within non-interest revenue.	
Fair value through PL	Held for trading	Fair value, with gains and losses arising from changes in fair value) (including interest and dividends) recognised in trading revenue.
	Designated at fair value through profit or loss	Fair value gains and losses (including interest and dividends) on the financial asset are recognised in the income statement as part of other gains and losses on financial instruments
	Fair value through profit or loss – default	Fair value gains and losses (including interest and dividends) on the financial asset are recognised in the income statement as part of other gains and losses on financial instruments within non-interest revenue.

Impairment

Expected credit losses (ECL) are recognised on financial assets classified as at either amortised cost or fair value through OCI (except equities), financial guarantee contracts that are not designated at fair value through profit or loss as well as loan commitments that are measured at fair value through profit or loss.

The measurement basis of the ECL of a financial asset includes assessing whether there has been a significant increase in credit risk (SICR) at the reporting date which includes forward-looking information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions. The measurement basis of the ECL, which is set out in the table that follows, is measured as the unbiased and probability weighted amount that is determined by evaluating a range of possible outcomes, the time value of money and forward looking information.

Stage 1	A 12-month ECL is calculated for financial assets which are neither credit-impaired on origination nor for which there has been a SICR.
Stage 2	A lifetime ECL allowance is calculated for financial assets that are assessed to have displayed a SICR since origination and are not considered low credit risk.
Stage 3	A lifetime ECL is calculated for financial assets that are assessed to be credit impaired. The following criteria are used in determining whether the financial asset is impaired: • default • significant financial difficulty of borrower and/or modification • probability of bankruptcy or financial reorganisation • disappearance of an active market due to financial difficulties.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

The key components of the impairment methodology are described as follows:

Significant increase in credit risk (SICR)	At each reporting date the Group assesses whether the credit risk of its exposures has increased significantly since initial recognition by considering the change in the risk of default occurring over the expected life of the financial asset. Credit risk of exposures which are overdue for more than 30 days are also considered to have increased significantly.
Low credit risk	Exposures are generally considered to have a low credit risk where there is a low risk of default, the exposure has a strong capacity to meet its contractual cash flow obligations and adverse changes in economic and business conditions may not necessarily reduce the exposure's ability to fulfil its contractual obligations.
Default	The Group's definition of default has been aligned to its internal credit risk management definitions and approaches. A financial asset is considered to be in default when there is objective evidence of impairment. The following criteria are used in determining whether there is objective evidence of impairment for financial assets or Groups of financial assets: • significant financial difficulty of borrower and/or modification (i.e. known cash flow difficulties experienced by the borrower) • a breach of contract, such as default or delinquency in interest and/or principal payments • disappearance of active market due to financial difficulties • it becomes probable that the borrower will enter bankruptcy or other financial reorganisation • where the Group, for economic or legal reasons relating to the borrower's financial difficulty, grants the borrower a concession that the Group would not otherwise consider. Exposures which are overdue for more than 90 days are also considered to be in default.
Forward-looking information	Forward looking information is incorporated into the Group's impairment methodology calculations and in the Group's assessment of SICR. The Group includes all forward looking information which is reasonable and available without undue cost or effort. The information will typically include expected macro-economic conditions and factors that are expected to impact portfolios or individual counterparty exposures.
Write-off	Financial assets are written off when there is no reasonable expectation of recovery. Financial assets which are written off may still be subject to enforcement activities.

ECLs are recognised within the statement of financial position as follows:

Financial assets measured at amortised cost (including commitments)	Recognised as a deduction from the gross carrying amount of the asset (Group of assets). Where the impairment allowance exceeds the gross carrying amount of the asset (Group of assets), the excess is recognised as a provision within other liabilities.
Off-balance sheet exposures (excluding loan commitments)	Recognised as a provision within provisions.
Financial assets measured at fair value through OCI	Recognised in the fair value reserve within equity. The carrying value of the financial asset is recognised in the statement of financial position at fair value.

Reclassification

Reclassifications of financial assets are permitted only in the following instances:

Reclassifications of debt financial assets are permitted when, and only when, the Group changes its business model for managing financial assets, in which case all affected financial assets are reclassified. Reclassifications are accounted for prospectively from the date of reclassification as follows:	
• Financial assets that are reclassified from amortised cost to fair value are measured at fair value at the date of reclassification with any difference in measurement basis being recognised in other gains and losses on financial instruments	
• The fair value of a financial asset that is reclassified from fair value to amortised cost becomes the financial asset's new carrying value	
• Financial assets that are reclassified from amortised cost to fair value through OCI are measured at fair value at the date of reclassification with any difference in measurement basis being recognised in OCI	
• The fair value of a financial asset that is reclassified from fair value through OCI to amortised cost becomes the financial asset's new carrying value with the cumulative fair value adjustment recognised in OCI being recognised against the new	
• The carrying value of financial assets that are reclassified from fair value through profit or loss to fair value through OCI remains at fair value	
• The carrying value of financial assets that are reclassified from fair value through OCI to fair value through profit or loss remains at fair value, with the cumulative fair value adjustment in OCI being recognised in the income statement at the date of reclassification.	

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Financial liabilities

Classification

Held for trading	Those financial liabilities incurred principally for the purpose of re-purchasing in the near term, those that form part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit taking.
Designated at fair value through profit or loss	Financial liabilities are designated to be measured at fair value in the following instances: - to eliminate or significantly reduce an accounting mismatch that would otherwise arise where the financial liabilities are managed and their performance evaluated and reported on a fair value basis - where the financial liability contains one or more embedded derivatives that significantly modify the financial asset's cash flows.
At amortised cost	All other financial liabilities not included the above categories.

Subsequent measurement

Subsequent to initial measurement, financial liabilities are classified in their respective categories and measured at either amortised cost or fair value as follows:

Held for trading	Fair value, with gains and losses arising from changes in fair value (including interest and dividends) recognised in trading revenue.
Designated at fair value through profit or loss	Fair value, with gains and losses arising from changes in fair value (including interest and dividends but excluding fair value gains and losses attributable to own credit risk) are recognised in other gains and losses on financial instruments as part of non-interest revenue. Fair value gains and losses attributable to changes in own credit risk are recognised within OCI, unless this would create or enlarge an accounting mismatch in which case the own credit risk changes are recognised within trading revenue.
Amortised cost	Amortised cost using the effective interest method with interest recognised in interest expense.

Derecognition of financial assets and liabilities

Financial assets and liabilities are derecognised in the following instances:

Financial assets	Financial assets are derecognised when the contractual rights to receive cash flows from the financial assets have expired, or where the group has transferred its contractual rights to receive cash flows on the financial asset such that it has transferred substantially all the risks and rewards of ownership of the financial asset. Any interest in the transferred financial assets that is created or retained by the group is recognised as a separate asset or liability. The Group enters into transactions whereby it transfers assets recognised in its statement of financial position, but retains either all or a portion of the risks or rewards of the transferred assets. If all or substantially all risks and rewards are retained, then the transferred assets are not derecognised. Transfers of assets with the retention of all or substantially all risks and rewards include securities lending and repurchase agreements. When assets are sold to a third party with a concurrent total rate of return swap on the transferred assets, the transaction is accounted for as a secured financing transaction, similar to repurchase transactions. In transactions where the group neither retains nor transfers substantially all the risks and rewards of ownership of a financial asset, the asset is derecognised if control over the asset is lost. The rights and obligations retained in the transfer are recognised separately as assets and liabilities as appropriate. In transfers where control over the asset is retained, the Group continues to recognise the asset to the extent of its continuing involvement, determined by the extent to which it is exposed to changes in the value of the transferred asset. Any cumulative gain/loss recognised in OCI in respect of equity investment securities designated at FVOCI is not recognised in profit or loss on derecognition of such securities.
Financial liabilities	Financial liabilities are derecognised when the obligation of the financial liabilities are extinguished, that is, when the obligation is discharged, cancelled or expires.

Modification of financial assets and liabilities

In determining whether a modification is substantial, for a financial asset, qualitative factors are considered. For a financial liability, both qualitative and quantitative factors are considered. Where an existing financial asset or liability is replaced by another with the same counterparty on substantially different terms, or the terms of an existing financial asset or liability are substantially modified, such an exchange or modification is treated as a derecognition of the original asset or liability and the recognition of a new asset or liability at fair value and recalculates a new effective interest rate, with the difference in the respective carrying amounts being recognised in other gains and losses on financial instruments within non-interest revenue. The date of recognition of a new asset is consequently considered to be the date of initial recognition for impairment calculation purposes.

If the terms are not substantially different for financial assets or financial liabilities, the Group recalculates the new gross carrying amount by discounting the modified cash flows of the financial asset or financial liability using the original effective interest rate. The difference between the new carrying gross carrying amount and the original gross carrying amount is recognised as a modification gain or loss within credit impairments (for distressed financial asset modifications) or gains and losses on financial instruments within non-interest revenue (for all other modifications).

Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Financial guarantee contracts

A financial guarantee contract is a contract that requires the Group (issuer) to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.

Financial guarantee contracts and loan commitments at a below market interest rate are initially recognised when the Group become party to the irrevocable commitment at fair value, which is generally equal to the premium received, and then amortised over the life of the financial guarantee. Financial guarantee contracts (that are not designated at fair value through profit or loss) and loan commitments at a below market interest rate, are subsequently measured at the higher of the:

- the ECL calculated for the financial guarantee; and
- unamortised premium.

Derivatives and embedded derivatives

A derivative is a financial instrument whose fair value changes in response to an underlying variable, requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors and is settled at a future date. Derivatives are initially recognised at fair value on the date on which the derivatives are entered into and subsequently remeasured at fair value.

All derivative instruments are carried as financial assets when the fair value is positive and as financial liabilities when the fair value is negative, subject to offsetting principles as described under the heading "Offsetting" below.

All gains and losses from changes in the fair values of derivatives are recognised immediately in profit or loss as trading revenue.

Other

Pledged assets

Financial assets transferred to external parties that do not qualify for de-recognition are reclassified in the statement of financial position from financial investments or trading assets to pledged assets, if the transferee has received the right to sell or re-pledge them in the event of default from agreed terms. Initial recognition of pledged assets is at fair value, whilst subsequently measured at amortized cost or fair value as appropriate. These transactions are performed in accordance with the usual terms of securities lending and borrowing.

Sale and repurchase agreements

Securities sold subject to linked repurchase agreements (repurchase agreements) are reclassified in the statement of financial position as pledged assets when the transferee has the right by contract or custom to sell or repledge the collateral. The liability to the counterparty is included under deposit and current accounts or trading liabilities, as appropriate.

Securities purchased under agreements to resell (reverse repurchase agreements), at either a fixed price or the purchase price plus a lender's rate of return, are recorded as loans and included under trading assets or loans and advances, as appropriate. For repurchase and reverse repurchase agreements measured at amortised cost, the difference between the purchase and sales price is treated as interest and amortised over the expected life using the effective interest rate method.

Offsetting

Financial assets and liabilities are offset and the net amount reported in the statement of financial position when there is a legally enforceable right to set-off the recognised amounts and there is an intention to settle the asset and the liability on a net basis, or to realise the asset and settle the liability simultaneously.

Collateral repossessed

Repossessed collateral are equities, investment properties or other investments repossessed from a customer to be used to settle the outstanding obligation.

When collaterals are repossessed on written off loans, they are recognised in other assets and income. Upon subsequent measurement, the receivable is written down against the allowance. Repossessed collaterals are included in the financial statement based on how the Bank intends to realize benefit from such collateral such as "Non current assets held for sale" and carried at the lower of cost or estimated fair value less cost to sell, if the group intends to sell or cost less accumulated depreciation, if for use in the normal course of business.

The group's accounting policy is to determine whether a repossessed asset can be best used for its internal operations or should be sold. Assets determined to be useful for the internal operations are transferred to their relevant asset category at the lower of their repossessed value or the carrying value of the original secured asset. Asset for which selling is determined to be a better option are transferred to assets held for sale at their fair value (if financial assets) and fair value less cost to sell for non-financial assets at the repossession date in, line with the group's policy.

Collateral Valuation

To mitigate its credit risks on financial assets, the group seeks to use collateral, where possible. The collaterals comes in various forms, such as cash, securities, letter of credit/guarantees, real estate, receivables, inventories, other non-financial assets and credit enhancements such as netting agreements. Collateral, unless repossessed, is not recorded on the Bank's statement of financial position.

However, the fair value of collateral affects the calculation of ECLs. It is generally assessed, at a minimum, at inception and re-assessed on a periodic basis.

To the extent possible, the Bank uses active market data for valuing financial assets held as collaterals. Other financial assets which do not have readily determinable market values are valued using models. Non-financial collateral, such as real estate, are valued based on data provided by third parties such as external valuers.

4 Statement of material accounting policies (continued)

4.4 Fair value

In terms of IFRS, the Group is either required to or elects to measure a number of its financial assets and financial liabilities at fair value. Regardless of the measurement basis, the fair value is required to be disclosed, with some exceptions, for all financial assets and financial liabilities.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market between market participants at the measurement date under current market conditions. Fair value is a market based measurement and uses the assumptions that market participants would use when pricing an asset or liability under current market conditions. When determining fair value it is presumed that the entity is a going concern devoid of any circumstance that indicates a forced transaction, involuntary liquidation or a distressed sale. In estimating the fair value of an asset or a liability, the Group takes into account the characteristics of the asset or liability that market participants would take into account when pricing the asset or liability at the measurement date.

Inputs and valuation techniques

Fair value is measured based on quoted market prices or dealer price quotations for identical assets and liabilities that are traded in active markets, which can be accessed at the measurement date, and where those quoted prices represent fair value. If the market for an asset or liability is not active or the instrument is not quoted in an active market, the fair value is determined using other applicable valuation techniques that maximise the use of relevant observable inputs and minimises the use of unobservable inputs. These include the use of recent arm's length transactions, discounted cash flow analyses, pricing models and other valuation techniques commonly used by market participants.

Fair value measurements are categorised into level 1, 2 or 3 within the fair value hierarchy based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement.

Where discounted cash flow analyses are used, estimated future cash flows are based on management's best estimates and a market related discount rate at the reporting date for an asset or liability with similar terms and conditions.

If an asset or a liability measured at fair value has both a bid and an ask price, the price within the bid-ask spread that is most representative of fair value is used to measure fair value.

The Group's valuation control framework governs internal control standards, methodologies, and procedures over its valuation processes, which include the following valuation techniques and main inputs and assumptions per type of instrument:

Item	Description	Valuation technique	Main inputs and assumptions (Level 2 and 3 fair value hierarchy items)
Derivative financial instruments	Derivative financial instruments comprise foreign exchange, interest rate, credit and equity derivatives that are held-for trading.	Standard derivative contracts are valued using market accepted models and quoted parameter inputs. More complex derivative contracts are modelled using more sophisticated modelling techniques applicable to the instrument. Techniques include: • Discounted cash flow model • Black-Scholes model • Combination technique models.	• Discount rate* • Spot prices of the underlying assets • Correlation factors • Volatilities • Dividend yields • Earnings yield • Valuation multiples
Trading assets and Trading liabilities	Trading assets and liabilities comprise instruments which are part of the Group's underlying trading activities. These instruments primarily include sovereign and corporate debt, and collateral.	Where there are no recent market transactions in the specific instrument, fair value is derived from the last available market price adjusted for changes in risks and information since that date.	

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Item	Description	Valuation technique	Main inputs and assumptions (Level 2 and 3 fair value hierarchy items)
Pledged assets	Pledged assets comprise instruments that may be sold or repurchased by the Group's counterparty in the absence of default by the Group. Pledged assets include sovereign debt (government treasury bills and bonds) pledged in terms of repurchase agreements.	Where a proxy instrument is quoted in an active market, the fair value is determined by adjusting the proxy fair value for differences between the proxy instrument and the financial investment being fair valued. Where proxies are not available, the fair value is estimated using more complex modelling techniques. These techniques include discounted cash flow and Black-Scholes models using current market rates for credit, interest, liquidity, volatility and other risks. Combination techniques are used to value unlisted equity securities and include inputs such as earnings and dividend yields of the underlying entity.	• Discount rate* • Spot prices of the underlying • Correlation factors • Volatilities • Dividend yields • Earnings yield • Valuation multiples
Financial investments	Financial investments are non-trading financial assets and primarily comprise of sovereign and corporate debt, unlisted equity instruments, investments in mutual fund investments and unit-linked investments.		
Loans and advances to banks and customers	Loans and advances comprise: • Loans and advances to banks: call loans, loans granted under resale agreements and balances held with other banks. • Loans and advances to customers: mortgage loans (home loans and commercial mortgages), other asset-based loans, including collateralised debt obligations (Vehicle and assets financing), and other secured and unsecured loans (card debtors, overdrafts, other demand lending, term lending and loans granted under resale agreements).	For certain loans, fair value may be determined from the market price of a recently occurring transaction adjusted for changes in risks and information between the transaction and valuation dates. Loans and advances are reviewed for observed and verified changes in credit risk and the credit spread is adjusted at subsequent dates if there has been an observable change in credit risk relating to a particular loan or advance. In the absence of an observable market for these instruments, discounted cash flow models are used to determine fair value. Discounted cash flow models incorporate parameter inputs for interest rate risk, foreign exchange risk, liquidity and credit risk, as appropriate. For credit risk, probability of default and loss given default parameters are determined using the relevant terms of the loan and loan counterparty such as the industry classification and subordination of the loan.	• Discount rate. • Probability of default. • Loss given default.
Deposits (including banks and customers) and debt funding	Deposits from banks and customers comprise amounts owed to banks and customers, deposits under repurchase agreements, negotiable certificates of deposit, credit-linked deposits and other deposits.	For certain deposits, fair value may be determined from the market price on a recently occurring transaction adjusted for all changes in risks and information between the transaction and valuation dates. In the absence of an observable market for these instruments discounted cash flow models are used to determine fair value based on the contractual cash flows related to the instrument. The fair value measurement incorporates all market risk factors including a measure of the Group's credit risk relevant for that financial liability. The market risk parameters are valued consistently to similar instruments held as assets stated in the section above. For collateralised deposits that are designated to be measured at fair value through profit or loss, such as securities repurchase agreements, the credit enhancement is incorporated into the fair valuation of the liability.	• Discount rate.

* Discount rates, where applicable, include the risk-free rate, risk premiums, liquidity spreads, credit risk (own and counterparty as appropriate), timing of settlement, storage/service costs, prepayment and surrender risk assumptions and recovery rates/loss given default.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Day one profit or loss

For financial instruments, where the fair value of the financial instrument differs from the transaction price, the difference is commonly referred to as day one profit or loss. Day one profit or loss is recognised in profit or loss immediately where the fair value of the financial instrument is either evidenced by comparison with other observable current market transactions in the same instrument, or is determined using valuation models with only observable market data as inputs.

Day one profit or loss is deferred where the fair value of the financial instrument is not able to be evidenced by comparison with other observable current market transactions in the same instrument, or determined using valuation models that utilise non-observable market data as inputs.

The timing of the recognition of deferred day one profit or loss is determined individually depending on the nature of the instrument and availability of market observable inputs. It is either amortised over the life of the transaction, deferred until the instrument's fair value can be determined using market observable inputs, or realised through settlement.

Any difference between the fair value at initial recognition and the amount that would be determined at that date using a valuation technique in a situation in which the valuation is dependent on unobservable parameters is not recognised in profit or loss immediately but is recognised over the life of the instrument on an appropriate basis or when the instrument is redeemed.

Fair value hierarchy

The Group's financial instruments that are both carried at fair value and for which fair value is disclosed are categorised by the level of fair value hierarchy. The different levels are based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement.

Hierarchy levels

The levels have been defined as follows:

Level 1	Fair value is based on quoted market prices (unadjusted) in active markets for an identical financial asset or liability. An active market is a market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.
Level 2	Fair value is determined through valuation techniques based on observable inputs, either directly, such as quoted prices, or indirectly, such as those derived from quoted prices. This category includes instruments valued using quoted market prices in active markets for similar instruments, quoted prices for identical or similar instruments in markets that are considered less than active or other valuation techniques where all significant inputs are directly or indirectly observable from market data.
Level 3	Fair value is determined through valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data and the unobservable inputs have a significant effect on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments where significant unobservable adjustments or assumptions are required to reflect differences between the instrument being valued and the similar instrument.

Hierarchy transfer policy

Transfers of financial assets and financial liabilities between levels of the fair value hierarchy are deemed to have occurred at the end of the reporting year during which change occurred.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

4.5 Employee benefits

Type	Description	Statement of financial position	Statement of other comprehensive income	Income statement
Defined contribution plans	The Group operates a contributory pension plan in line with the Pension Reform Act 2014. Employees and the Bank contribute 8% and 10% respectively of each of the qualifying staff salary in line with the provisions of the Pension Reforms Act 2014.	Liability is recognised for unpaid contributions.	No impact.	Contributions are recognised as an expense under staff cost in profit or loss in the periods during which services are rendered by employees.
Termination benefits	Termination benefits are recognised when the Group is committed, without realistic possibility of withdrawal, to a formal detailed plan to terminate employment before the normal retirement date, or to provide termination benefits as a result of an offer made to encourage voluntary redundancy when it is probable that the offer will be accepted, and the number of acceptances can be estimated reliably.	A liability is recognised for the termination benefit representing the best estimate of the amount payable.	No impact.	Termination benefits are recognised as an expense under staff cost if the Group has made an offer encouraging voluntary redundancy, it is probable that the offer will be accepted, and the number of acceptances can be estimated reliably.
Short-term benefits	Short-term benefits consist of salaries, accumulated leave payments, profit share, bonuses and any non-monetary benefits such as medical aid contributions.	A liability is recognised for the amount expected to be paid under short-term cash bonus plans or accumulated leave if the Group has a present legal or constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.	No direct impact.	Short-term employee benefit obligations are measured on an undiscounted basis and are expensed as the related service is provided.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Equity-linked transactions

Equity-settled share based payments	The fair value of the equity-settled share based payments are determined on grant date and accounted for within operating expenses - staff costs over the vesting period with a corresponding increase in the Group's share-based payment reserve. Non-market vesting conditions, such as the resignation of employees and retrenchment of staff, are not considered in the valuation but are included in the estimate of the number of options expected to vest. At each reporting date, the estimate of the number of options expected to vest is reassessed and adjusted against profit or loss and equity over the remaining vesting period. On vesting of the equity-settled share based payments, amounts previously credited to the share-based payment reserve are transferred to retained earnings through an equity transfer.
Cash-settled share based payments	Cash-settled share based payments are accounted for as liabilities at fair value until the date of settlement. The liability is recognised over the vesting period and is revalued at every reporting date up to and including the date of settlement. All changes in the fair value of the liability are recognised in operating expenses – staff costs.

4.6 Non-financial assets (Intangible assets, Property and equipment, Right of use assets)

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Type	Initial and subsequent measurement	Useful lives, depreciation/ amortisation method or fair value basis	Impairment	Derecognition														
Tangible assets	Property and Equipment are recognized if it's probable to generate future economic benefits and its cost can be reliably measured, applying this to both initial and subsequent expenditures. The cost of PPE includes the purchase price (net of discounts), import duties, non-refundable taxes, directly attributable costs to bring the asset to working condition (such as site preparation, delivery, installation, borrowing costs, and relevant employee benefits), and estimated dismantling and site restoration costs; Stanbic IBTC utilizes the cost model for PPE valuation. Property and equipment are initially measured at cost. Cost includes expenditure that is directly attributable to the acquisition of the asset. Property and equipment are subsequently measured at cost less accumulated depreciation and impairment losses. Land is measured at cost less impairment losses. Land is not depreciated. Costs that are subsequently incurred are included in the asset's related carrying amount or are recognised as a separate asset, as appropriate, only when it is probable that future economic benefits will flow to the Group and the cost of the item can be measured reliably. Expenditure, which does not meet these criteria, is recognised in profit or loss as incurred. Where significant parts of an item of property or equipment have different useful lives, they are accounted for as separate major components of property and equipment.	Property and equipment are depreciated on the straight-line basis over estimated useful lives (see below) of the assets to their residual values. Land and Work-in progress are not depreciated. <table><tr><td>Land</td><td>N/A</td></tr><tr><td>Freehold Buildings</td><td>25 years</td></tr><tr><td>Computer equipments</td><td>3-5 years</td></tr><tr><td>Motor vehicles</td><td>4-5 years</td></tr><tr><td>Office equipments</td><td>6 years</td></tr><tr><td>Furniture & fittings</td><td>4 years</td></tr><tr><td>Improvements on leasehold building</td><td>greater of 6 years or useful life of underlying asset</td></tr></table> The residual values, useful lives and the depreciation method applied are reviewed, and adjusted if appropriate, at each financial year end.	Land	N/A	Freehold Buildings	25 years	Computer equipments	3-5 years	Motor vehicles	4-5 years	Office equipments	6 years	Furniture & fittings	4 years	Improvements on leasehold building	greater of 6 years or useful life of underlying asset	Intangible assets are tested annually for impairment and additionally when an indicator of impairment exists. Other non-financial assets are reviewed for impairment at each reporting date and tested for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognised in profit or loss for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is determined as the higher of an asset's fair value less costs to sell and value in use. Fair value less costs to sell is determined by ascertaining the current market value of an asset and deducting any costs related to the realisation of the asset. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.	The non-financial assets are derecognised on disposal or when no future economic benefits are expected from their use or disposal. The gain or loss on derecognition is recognised in profit or loss and is determined as the difference between the net proceeds and the carrying amount of the non-financial asset.
Land	N/A																	
Freehold Buildings	25 years																	
Computer equipments	3-5 years																	
Motor vehicles	4-5 years																	
Office equipments	6 years																	
Furniture & fittings	4 years																	
Improvements on leasehold building	greater of 6 years or useful life of underlying asset																	
Intangible assets/ Computer software	Costs associated with developing or maintaining computer software programmes and the acquisition of software licences are generally recognised as an expense as incurred. However, direct computer software development costs that are clearly associated with an identifiable and unique system, which will be controlled by the Group and have a probable future economic benefit beyond one year as well as acquired software, are recognised as intangible assets. Intangible assets are carried at cost less accumulated amortisation and accumulated impairment losses from the date that the assets are available for use. Expenditure subsequently incurred on computer software is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates.	Amortisation is recognised in profit or loss on a straight-line basis at rates appropriate to the expected lives of the assets (2 to 15 years) from the date that the asset is available for use. Amortisation methods, useful lives and residual values are reviewed at each financial year end and adjusted, if necessary.

Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

4.7 Leases

Type	Description	Statement of financial position	Income statement
Right of use assets and lease liabilities			
Lessee accounting	All leases are accounted for by recognising a right-of-use asset and a lease liability except for: • leases of low value assets; and • leases with a duration of twelve months or less. All leases that meet the criteria as either a lease of a low value asset or a short term lease are accounted for on a straight-line basis over the lease term of 2 to 40 years.	Leases liabilities are recognized at the lease commencement date, representing the obligation for future lease payments. Lease liabilities: Initially measured at the present value of the contractual payments due to the lessor over the lease term, with the discount rate determined by reference to the rate implicit in the lease unless (as is typically the case for the Group) this is not readily determinable, in which case the Group's incremental borrowing rate on commencement of the lease is used. The Group's standardised funding transfer pricing rate is the base on which the incremental borrowing rate is calculated. Variable lease payments are only included in the measurement of the lease liability if they depend on an index or rate. In such cases, the initial measurement of the lease liability assumes the variable element will remain unchanged throughout the lease term. Other variable lease payments are expensed in the year to which they relate. On initial recognition, the carrying value of the lease liability also includes: • Amounts expected to be payable under any residual value guarantee; • The exercise price of any purchase option granted in favour of the Group, should it be reasonably certain that this option will be exercised; • Any penalties payable for terminating the lease, should the term of the lease be estimated on the basis of this termination option being exercised. Subsequent to initial measurement, lease liabilities increase as a result of interest charged at a constant rate on the balance outstanding and are reduced for lease payments made. Right-of-use assets: Initially measured at the amount of the lease liability, reduced for any lease incentives received, and increased for: • lease payments made at or before commencement of the lease; • initial direct costs incurred; and • the amount of any provision recognised where the Group is contractually required to dismantle, remove or restore the leased asset. The Group applies the cost model subsequent to the initial measurement of the right-of-use assets. The Group measures the right-of-use assets at cost less any accumulated depreciation and any accumulated impairment losses and adjusted for any remeasurement of the lease liability. Termination of leases: When the Group or lessor terminates or cancels a lease, the right-of-use asset and lease liability are derecognised. Accruals for unpaid lease charges, together with a straight-line lease asset or liability, being the difference between actual payments and the straight-line lease expense are recognised.	Interest expense on lease liabilities: A lease finance cost, determined with reference to the interest rate implicit in the lease or the Group's incremental borrowing rate, is recognised within interest expense over the lease year. Depreciation on right-of-use assets: Subsequent to initial measurement, the right-of-use assets are depreciated on a straight-line basis over the remaining term of the lease or over the remaining economic life of the asset should this term be shorter than the lease term unless ownership of the underlying asset transfers to the Group at the end of the lease term, whereby the right-of-use assets are depreciated on a straight-line basis over the remaining economic life of the asset. This depreciation is recognised as part of operating expenses. Termination of leases: On derecognition of the right-of-use asset and lease liability, any difference is recognised as a derecognition gain or loss together with termination or cancellation costs in profit or loss. Payments made under these leases, net of any incentives received from the lessor, are recognised in operating expenses on a straight-line basis over the term of the lease. When these leases are terminated before the lease year has expired, any payment required to be made to the lessor by way of a penalty is recognised as operating expenses in the year in which termination takes place.
Reassessment and modification of leases	Reassessment of lease terms and lease modifications that are not accounted for as a separate lease: When the Group reassesses the terms of any lease (i.e. it re-assesses the probability of exercising an extension or termination option) or modifies the terms of a lease without increasing the scope of the lease or where the increased scope is not commensurate with the stand-alone price, it adjusts the carrying amount of the lease liability to reflect the payments to be made over the revised term, which are discounted at the applicable rate at the date of reassessment or modification. The carrying amount of lease liability is similarly revised when the variable element of future lease payments dependent on a rate or index is revised. For reassessments to the lease terms, an equivalent adjustment is made to the carrying amount of the right-of-use asset, with the revised carrying amount being depreciated over the revised lease term. However, if the carrying amount of the right-of-use asset is reduced to zero any further reduction in the measurement of the lease liability, is recognised in profit or loss.		
Lessor accounting			
Finance leases	Leases, where the Group transfers substantially all the risks and rewards incidental to ownership, are classified as finance leases.	Finance lease receivable, including initial direct costs and fees, are primarily accounted for as financing transactions in banking activities, with rentals and instalments receivable, less unearned finance charges, being included in loans and advances.	Finance charges earned within interest income are computed using the effective interest method, which reflects a constant yearic rate of return on the investment in the finance lease. The tax benefits arising from investment allowances on assets leased to clients are accounted for within direct taxation.
Operating leases	All leases that do not meet the criteria of a finance lease are classified as operating leases.	The asset underlying the lease continues to be recognised and accounted for in terms of the relevant Group accounting policies. Accruals for outstanding lease charges, together with a straight-line lease asset or liability, being the difference between actual payments and the straight-line lease income are recognised.	Operating lease income net of any incentives given to lessees, is recognised on the straight-line basis, or a more representative basis where applicable, over the lease term and is recognised in operating income. When an operating lease is terminated before the lease year has expired, any payment received/(paid) by the Group by way of a penalty is recognised as income/(expense) in the year in which termination takes place.
IFRS 16 - Lessor lease modifications			
Finance leases	When the Group modifies the terms of a lease resulting in an increase in scope and the consideration for the lease increases by an amount commensurate with a stand-alone price for the increase in scope, the Group accounts for these modifications as a separate new lease. These lease modifications are accounted for as a separate new lease from the effective date of the modification and the net investment in the lease becomes the carrying amount of the underlying asset. All other lease modifications that are not accounted for as a separate lease are accounted for in terms of IFRS 16, unless the classification of the lease would have been accounted for as an operating lease had the modification been in effect at inception of the lease.		
Operating leases	Modifications are accounted for as a new lease from the effective date of the modification.		

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

4.8 Equity

Share issue costs	Incremental external costs directly attributable to a transaction that increases or decreases equity are deducted from equity, net of related tax. All other share issue costs are expensed.
Distributions to owners	Distributions are recognised in equity in the year in which they are declared. Distributions declared after the reporting date are disclosed in the distributions note to the financial statements.

4.9 Provisions, contingent assets and contingent liabilities

Provisions	Provisions are recognised when the Group has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate of the amount of the obligation can be made. Provisions are determined by discounting the expected future cash flows using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the liability. The Group's provisions typically (when applicable) include the following:
-------------------	---

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Provisions (continued)	<i>Provisions for legal claims</i> Provisions for legal claims are recognised on a prudent basis for the estimated cost for all legal claims that have not been settled or reached conclusion at the reporting date. In determining the provision management considers the probability and likely settlement (if any). Reimbursements of expenditure to settle the provision are recognised when and only when it is virtually certain that the reimbursement will be received. <i>Provision for restructuring</i> A provision for restructuring is recognised when the Group has approved a detailed formal plan, and the restructuring either has commenced or has been announced publicly. Future operating costs or losses are not provided for. <i>Provision for onerous contracts</i> A provision for onerous contracts is recognised when the expected benefits to be derived by the Group from a contract are lower than the unavoidable cost of meeting its obligations under the contract. The provision is measured at the present value of the lower of the expected cost of terminating the contract and the expected net cost of continuing with the contract. Before a provision is established, the Group recognises any impairment loss on the assets associated with that contract. <i>Provision for tax claims</i> Provisions for taxes claims relates to additional assessment on taxes, including withholding tax, value added tax, PAYE tax.
Contingent assets	Contingent assets are not recognised in the financial statements but are disclosed when, as a result of past events, it is probable that economic benefits will flow to the Group, but this will only be confirmed by the occurrence or non-occurrence of one or more uncertain future events which are not wholly within the Group's control.
Contingent liabilities	Contingent liabilities include certain guarantees (other than financial guarantees) and letters of credit and are not recognised in the financial statements but are disclosed in the notes to the financial statements.

4.10 Taxation

Type	Description, recognition and measurement	Offsetting
Current tax-determined for current year transactions and events	Current tax comprises the expected tax payable or receivable on the taxable income or loss for the period and any adjustment to the tax payable or receivable in respect of previous periods. The amount of current tax payable or receivable is the best estimate of the tax amount expected to be paid or received that reflects uncertainty related to income taxes, if any. Current tax also includes any tax arising from dividend. Current tax is recognised as an expense for the period and adjustments to past periods except to the extent that current tax related to items that are charged or credited in OCI or directly to equity. The Nigeria Tax Act (NTA), 2025 introduced a 4% development levy based on assessable profits and a minimum Effective Tax Rate (ETR) of 15% for entities that are part of Multinational Enterprise(MNE) with turnover of £750m (or equivalent) and companies with turnover of NGN50bn and above. Further, the NTA mandates that where a dividend is paid out of profit on which no tax is payable due to either: (a) no total profit; or (b) the total profit is less than the amount of dividend paid, the company paying the dividend will be subjected to tax at 30% of the dividends paid, as if the dividend is the total profits of the company for the period of assessment to which the accounts, out of which the dividends paid relates. However, dividends paid out of profit that have been subjected to tax, profits exempted from income tax or franked investment income are exempted from	

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Type	Description, recognition and measurement	Offsetting
Deferred tax-determined for future tax consequences	Deferred tax is recognised in profit or loss except to the extent that it relates to a business combination (relating to a measurement year adjustment where the carrying amount of the goodwill is greater than zero), or items recognised directly as part of OCI. Deferred tax is recognised using the liability method in respect of temporary differences arising between the tax bases of assets and liabilities and their carrying values for financial reporting purposes. Deferred tax is measured at the tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted at the reporting date and reflects uncertainty related to income taxes, if there is any. Deferred tax is not recognised for the following temporary differences: • the initial recognition of goodwill; • the initial recognition of assets and liabilities in a transaction that is not a business combination, which affects neither accounting nor taxable profits or losses; and • investments in subsidiaries, associates and jointly controlled arrangements (excluding mutual funds) where the Group controls the timing of the reversal of temporary differences and it is probable that these differences will not reverse in the foreseeable future. The amount of deferred tax provided is based on the expected manner of realisation or settlement of the carrying amount of the asset or liability and is not discounted. Deferred tax assets are recognised to the extent that it is probable that future taxable income will be available against which the unused tax losses can be utilised. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realised.	Current tax assets and liabilities, deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities and assets, and they relate to income taxes levied by the same tax authority on the same taxable entity, or on different tax entities, but they intend to settle current tax liabilities and assets on a net basis or their tax assets and liabilities will be realised simultaneously.
Indirect taxation	Indirect taxes are recognised in profit or loss, as part of other operating expenses.	N/A
Dividend tax	Taxes on dividends declared by the Group are recognised as part of the dividends paid within equity as dividend tax represents a tax on the shareholder and not the Group.	N/A
Windfall tax	The 2024 Finance (Amendment) Act imposes a 70% levy on Nigerian banks' realized profits from foreign exchange (FX) transactions between 2023 and 2025, following the Naira exchange rate unification. Deposit Money Banks (DMBs) must report all FX transactions to the Federal Inland Revenue Service (FIRS). The levy applies to profits from all FX transactions, including gains from FX assets (interest, fees, commissions), trading, derivatives, conversions, repatriation, arbitrage, and hedging terminations. Unrealized gains are excluded. DMBs must calculate realized profits based on transaction and settlement date exchange rates, report net gains for complex transactions, use market spot rates where applicable, maintain detailed documentation, and comply with International Financial Reporting Standards (IAS 21).	N/A

4.11 Revenue and expenditure

Description	Recognition and measurement
Net interest income	Interest income and expense (with the exception of borrowing costs that are capitalised on qualifying assets, that is assets that necessarily take a substantial year of time to get ready for their intended use or sale and which are not measured at fair value) are recognised in profit or loss using the effective interest method for all interest-bearing financial instruments.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

4.11 Revenue and expenditure (continued)

Description	Recognition and measurement
Net interest income	In terms of the effective interest method, interest is recognised at a rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, where appropriate, a shorter year, to the net carrying amount of the financial asset or financial liability. Direct incremental transaction costs incurred and origination fees received, including loan commitment fees, as a result of bringing margin- yielding assets or liabilities into the statement of financial position, are capitalised to the carrying amount of financial instruments that are not at fair value through profit or loss and amortised as interest income or expense over the life of the asset or liability as part of the effective interest rate. Where the estimates of payments or receipts on financial assets or financial liabilities are subsequently revised, the carrying amount of the financial asset or financial liability is adjusted to reflect actual and revised estimated cash flows. The carrying amount is calculated by computing the present value of the adjusted cash flows at the financial asset or financial liability's original effective interest rate. Any adjustment to the carrying value is recognised in net interest income. When a financial asset is classified as Stage 3 impaired, interest income is calculated on the impaired value (gross carrying value less specific impairment) based on the original effective interest rate. Interest expense on lease liabilities: A lease finance cost, determined with reference to the interest rate implicit in the lease or the Group's incremental borrowing rate, is recognised within interest expense over the lease year. Dividends received on preference share investments classified as debt form part of the Group's lending activities and are included in interest income.
Net fee and commission revenue	All fees and commission income are point in time with the exception of loan commitment that is overtime. Loan commitment fees for loans that are not expected to be drawn down are recognised on a straight-line basis over the commitment year. All other fee and commission income is recognised under the principles of IFRS 15, which states that revenue is recognised when a promised service is transferred to a customer and the customer obtains control of that service. Loan syndication fees, where the Group does not participate in the syndication or participates at the same effective interest rate for comparable risk as other participants, are recognised as revenue when the syndication has been completed. Syndication fees that do not meet these criteria are capitalised as origination fees and amortised as interest income. The fair value of issued financial guarantee contracts on initial recognition is amortised as income over the term of the contract. Fee and commission expenses, included in net fee and commission revenue, are mainly transaction and service fees relating to financial instruments, which are expensed as the services are received. Expenditure is recognised as fee and commission expenses where the expenditure is linked to the production of fee and commission revenue.
Trading revenue	Trading revenue comprises all gains and losses from changes in the fair value of trading assets and liabilities, together with related interest income, expense and dividends.
Insurance revenue	As the Company provides insurance services under a group of insurance contracts issued, it reduces its LRC and recognises insurance revenue, which is measured at the amount of consideration the Company expects to be entitled to in exchange for those services. For groups of insurance contracts measured under the GM, insurance revenue consists of the following: → The sum of the changes in the LRC including - the insurance service expense incurred in the period measured at the amounts expected at the beginning of the period, excluding: - amounts allocated to the loss component; - amounts relating to risk adjustment for non-financial risk not including; - repayments of investment components; - insurance acquisition expenses; - amounts related to income tax that are specifically chargeable to the policyholder - the change in the risk adjustment for non-financial risk, excluding: - changes included in insurance finance income or expense as detailed in section J - changes that relate to future service that adjust the CSM as detailed in subsequent measurement in section G2; and - amounts allocated to the loss component of the liability for remaining coverage arising from changes in the risk adjustment for non-financial risk recognised in profit or loss because of the release from risk; - the amount of CSM for the services provided in the period; - experience adjustments for premium receipts (and any related cash flows such as insurance acquisition cash flows) that relate to current or past services, if any. The portion of premiums that can be seen as recovering those acquisition cash flows are included in the insurance service expenses in each period. Both amount are measured on the same basis used for the allocation of the CSM to profit or loss under d) above. When applying the PAA, the Company recognises insurance revenue for the period based on the passage of time by allocating premium receipts including premium experience adjustments to each period of service. However, when the expected pattern of release from risk during the coverage period differs significantly from the passage of time, then premium receipts are allocated based on the expected pattern of incurred insurance service expense. The Company issues insurance policies with different expected pattern of occurrence of claims. For those groups of contracts, revenue is recognised based on the expected pattern of claim occurrence. At the end of each reporting period, the Company considers whether there was a change in facts and circumstances indicating a need to change, on a prospective basis, the premium receipt allocation due to changes in the expected pattern of claim occurrence for new and existing groups.
Other revenue	Other revenue includes dividends on equity financial assets and re- measurement gains and losses from contingent consideration on disposals and purchases. Gains and losses on equity instruments designated at fair value through profit or loss are recognised within other revenue. This is however different from the trading revenue described above. Gains and losses on equity instruments classified as fair value through other comprehensive income (FVOCI) financial assets are reclassified from OCI to other revenue on derecognition or impairment.
Dividend income	Dividends are recognised in profit or loss when the right to receipt is established. Scrip dividends are recognised as dividends received where the dividend declaration allows for a cash alternative.
Management fees on assets under management	Fee income includes management fees on assets under management and administration fees. Management fees on assets under management are recognised over the year for which the services are rendered, in accordance with the substance of the relevant agreements.
Operating expenses	Expenses are recognized on an accrual bases regardless of the time of cash outflows. Expenses are recognized in the income statement when a decrease in future economic benefit related to a decrease in an assets or an increase of a liability has arisen that can be measured reliably. Expenses are recognized in the same reporting year when they are incurred in cases when it is not probable to directly relate them to particular income earned during the current reporting year and when they are not expected to generate any income during the coming years. Expenses that are not related to the income earned during the reporting year, but expected to generate future economic benefits, are recorded in the financial statements as assets.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Interest in suspense (IIS) (refers to contractual interest which accrues on financial assets which are in default classified as non-performing) is presented as follows:

IFRS 9 accounting treatment

IFRS 9 requires that interest for financial assets classified as stage 3 (i.e. in default) only be calculated on the gross carrying amount less impairments (i.e. amortised cost less impairment balance). The Group has applied this requirement by suspending all contractual interest on such financial assets and recognising interest on the amortised cost balance utilising the financial assets' effective interest rate. IFRS 9 requires that the suspended contractual interest be recognised as part of the financial assets' gross carrying amount and be deducted as part of the reconciliation to the net carrying amount which is reported in the balance sheet. Whilst the IIS is recognised in the gross carrying amount it does not impact the net carrying amount of the financial asset as presented on the face of the statement of financial position. Given the IFRS 9 requirement that the gross carrying amount would include the contractual suspended interest on financial assets classified as stage 3, the Group reports the balance sheet interest in suspense account as part of stage 3 impairment when calculating the financial assets' net carrying amount. The Group has elected to continue to present upon the curing of the non-performing financial asset, this suspended contractual interest (previously unrecognised interest) within credit impairment line in the income statement.

4.12 Other significant accounting policies

Segment reporting	An operating segment is a component of the Group engaged in business activities, whose operating results are reviewed regularly by management in order to make decisions about resources to be allocated to segments and assessing segment performance. The Group's identification of segments and the measurement of segment results is based on the Group's internal reporting to management. Transactions between segments are priced at market-related rates.
Fiduciary activities	The Group commonly engages in trust or other fiduciary activities that result in the holding or placing of assets on behalf of individuals, trusts, post-employment benefit plans and other institutions. These assets and the income arising directly thereon are excluded from these financial statements as they are not assets of the Group. However, fee income earned and fee expenses incurred by the Group relating to the Group's responsibilities from fiduciary activities are recognised in profit or loss.
Regulatory risk reserve	The regulatory risk reserve represents a reserve component created when credit impairment on loans and advances as accounted for under IFRS using the expected loss model differs from the Prudential Guidelines set by the Central Bank of Nigeria.
Statutory reserve	Nigerian banking and pension industry regulations require the banking and pension subsidiaries to make an annual appropriation to a statutory reserve. For the banking subsidiary, an appropriation of 30% of profit after tax is made if the statutory reserve is less than paid-up share capital and 15% of profit after tax if the statutory reserve is greater than the paid up share capital. The pension subsidiary is required to transfer 12.5% of its profit after tax to a statutory reserve. Statutory reserve is not available for distribution to shareholders. See note 21.3 (a)(i).

4 Statement of material accounting policies (continued)

4.13 Non-current assets held for sale and disposal Groups

Type	Description	Statement of financial position	Income statement
Non-current assets/disposal Groups that are held for sale	Comprising assets and liabilities that are expected to be recovered primarily through sale rather than continuing use (including regular purchases and sales in the ordinary course of business).	Immediately before classification, the assets (or components of a disposal Group) are remeasured in accordance with the Group's accounting policies and tested for impairment. Thereafter, the assets are measured at the lower of their carrying amount and fair value less costs to sell. Assets and liabilities (or components of a disposal Group) are presented separately in the statement of financial position.	Impairment losses on initial classification as well as subsequent gains and losses on remeasurement of these assets or disposal Groups are recognised in profit or loss. Property and equipment and intangible assets are not depreciated or amortised.

4.14 Insurance Operations

Summary of measurement methods

The company issues the following contracts that are accounted for using different measurement methods:

→ Group Life, this policy is designed to provide insurance benefits/ group life cover to its assured. The policy covers the insured in the event of death within the period of insurance. The company accounts for these policies applying the Premium Allocation Approach (PAA);

→ Credit Life, Group Credit Life assurance covers the outstanding loan balance when there is a claim, with the assumption that the borrower made his/her repayments as and when due. The job loss benefit is the sum of the principal repayments for half of the outstanding loan tenor, subject to a maximum of 12 or 24 months. The company accounts for these policies applying the Premium Allocation Approach (PAA). A PAA eligibility test will be conducted for this product where the coverage period is beyond one year;

→ Fixed annuity contracts, the retiree annuity is designed to provide cover for the annuitant for a guaranteed period of ten years and thereafter until the date of death of the annuitant. These policies are accounted for applying the General Measurement Model (GMM).

SN	Contract Issued	Product classification	Measurement Models Choices
1	Group Life Assurance: This policy is designed to provide insurance benefits/ group life cover to its assured. The policy does not allow an option of receiving the sum assured on maturity.	Annual	PAA
2	Retiree Life Annuity: The retiree annuity is designed to provide cover for the annuitant for a guaranteed period of ten years and thereafter until the date of death of the annuitant.	Single premium with coverage throughout policyholder's lifetime	GMM
3	Group Credit Life Assurance: Group Credit Life assurance covers the outstanding loan balance when there is a claim, with the assumption that the borrower made his/her repayments as and when due.	Based on contractual terms per policy	PAA
4	Term Assurance: A death only cover with death benefits payable if death occurs when the policy is active. Minimum cover of one year with a cash back feature.	Based on contractual terms per policy	GMM
5	Mortgage Protection Insurance: Similar to the Group Credit Life policy. Covers for death, permanent total disability, critical illness and job loss. The benefits payable is the outstanding loan, excluding interest, assuming repayments are up to date.	Based on contractual terms per policy	PAA

4 Statement of material accounting policies (continued)

Definition and Classification

Products sold by the company are classified as insurance contracts when the company accepts significant insurance risk from a policyholder by agreeing to compensate the policyholder if a specified uncertain future event adversely affects the policyholder.

This assessment is made on a contract-by-contract basis at the contract issue date. In making this assessment, the company considers all its substantive rights and obligations, whether they arise from contract, law or regulation.

The company determines whether it contains significant insurance risk, by assessing if an insured event could cause the company to pay to the policyholder additional amounts that are significant in any single scenario with commercial substance even if the insured event is extremely unlikely or the expected present value of the contingent cash flows is a small proportion of the expected present value of the remaining cash flows from the insurance contract.

The company assesses, on a contract-by-contract basis, whether participating contracts meet the definition of insurance contracts with direct participation features, which need to satisfy all three of the following criteria:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the company expects to pay to the policyholder an amount equal to a substantial share of the fair value returns from the underlying items; and
- a substantial proportion of the cash flows that the company expects to pay to the policyholder should be expected to vary with the cash flows from the underlying items.

The company assesses whether the above conditions and criteria are met using its expectations at the issue date of the contracts and will not reassess the conditions afterwards, unless the contract is modified.

The company applies its judgement to assess whether the amount expected to be paid to the policyholder constitutes a substantial share of fair value returns from the underlying items and whether the variable cash flows represent a substantial proportion of the cash flows.

The company does not issue investment contracts with discretionary participation features for some insurance contracts.

The company holds reinsurance contracts to mitigate certain risk exposure. These are quota share reinsurance and facultative reinsurance contracts. A reinsurance contract is an insurance contract issued by a reinsurer to compensate the company for claims arising from one or more insurance contracts issued by the company.

Separating components from insurance and reinsurance contracts

Some insurance contracts issued by the company have several components in addition to the provision of the insurance coverage service, such as an investment component. The company assesses its products to determine whether some of these components are distinct and need to be separated and accounted for applying other Standards. When these non-insurance components are non-distinct they will be accounted for together with the insurance component as part of the accounting for an insurance contract.

The company first considers the need to separate distinct embedded derivatives and investment components before assessing the need to separate any non-insurance services component.

Separating embedded derivatives

When an embedded derivative is not closely related to the host insurance contract, it should be separated and accounted for under IFRS 9 as if it was a standalone derivative and measured at FVTPL. Where IFRS 9 considers the embedded derivative as closely related to the host insurance contract then the embedded derivative is not separated and is accounted for applying IFRS 17 together with the host insurance contract. The company has not identified any embedded derivative in an insurance contract that requires to be separated from the host.

Separating investment components

Investment components are only separated from the insurance contract if they are distinct. Those distinct investment components are accounted for by applying IFRS 9.

In assessing whether an investment component is distinct, the company considers whether the investment and insurance components are not highly interrelated and a contract with equivalent terms to the investment component is sold (or could be sold) separately in the same market or in the same jurisdiction by other entities (including entities issuing insurance contracts).

In determining whether investment and insurance components are highly interrelated the company assesses whether it is unable to measure one component without considering the other and the policyholder is unable to benefit from one component unless the other component is present, i.e. whether cancelling one component also terminates the other. The company has not identified any distinct investment components that requires to be separated from the host.

Separating promises to transfer distinct goods or non-insurance services

After the company has determined whether to separate embedded derivatives and investment components, it considers the separation of any promise to transfer goods or non-insurance services embedded in the contract. The company separates from the host insurance contract only distinct promises to transfer goods or non-insurance services to a policyholder. Once separated, such promises are accounted for applying IFRS 15.

In determining whether an obligation to deliver a good or non-insurance service promised to a policyholder is distinct, the company considers whether the policyholder can benefit from the good or service either on its own or together with other resources readily available to the policyholder that are either sold separately or it is something that the policyholder already has.

A good or non-insurance service that is promised to the policyholder is not distinct if the cash flows and risks associated with the good or service are highly interrelated with the cash flows and risks associated with the insurance components and the company provides a significant service in integrating the good or non-insurance service with the insurance components. The company has not identified any distinct goods or non-insurance services.

Separating insurance components of a single insurance contract

Once the embedded derivatives, investment components and the goods and services components are separated, the company assesses whether the contract should be separated into several insurance components that, in substance, should be treated as separate contracts.

To determine whether a single legal contract does not reflect the substance of the transaction and its insurance components recognised and measured separately instead, the company considers whether there is an interdependency between the different risks covered, whether components can lapse independently of each other and whether the components can be priced and sold separately.

When the company enters into one legal contract with different insurance components operating independently of each other, insurance components are recognised and measured separately applying IFRS 17.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Level of aggregation

The company identifies portfolios by aggregating insurance contracts that are subject to similar risks and managed together. In grouping insurance contracts into portfolios, the company considers the similarity of risks rather than the specific labelling of the product lines. The company determines that all contracts within each product line, as defined for management purposes, have similar risks and, therefore, represent a portfolio of contracts when they are managed together.

Each portfolio is sub-divided into groups of contracts to which the recognition and measurement requirements of IFRS 17 are applied. At initial recognition, the company segregates contracts based on when they were issued. A portfolio contains all contracts that were issued within a 12-month period for all products except the annuity product for which the company adopted the monthly cohort. Each portfolio is then further disaggregated into three groups of contracts:

- a) contracts that are onerous on initial recognition;
- b) contracts that, on initial recognition, have no significant possibility of becoming onerous subsequently; and
- c) any remaining contracts in the portfolio.

In determining the appropriate group, the company measures a set of contracts together using reasonable and supportable information. The company applies significant judgement in determining at what level of granularity the company has sufficient information to conclude that all contracts within a set will be in the same group. In the absence of such information the company assesses each contract individually.

The determination of whether a contract or a group of contracts is onerous is based on the expectations as at the date of initial recognition, with fulfilment cash flow expectations determined on a probability weighted basis. The company determines the appropriate level at which reasonable and supportable information is available to assess whether the contracts are onerous at initial recognition and whether the contracts not onerous at initial recognition have a significant possibility of becoming onerous subsequently.

To determine groups that have significant possibility of becoming onerous, the company uses confidence intervals to stress test the cash flows. Risk adjustment confidence intervals for GMM & VFA not profitable at 90% this will be onerous, profitable at 90% this will be onerous marginally profitable, profitable at 95% will be highly profitable. PAA follow the same model but apply 75% confidence level.

All groups include only contracts issued within a 12-month period except for groups within the annuity portfolio. The composition of groups established at initial recognition is not subsequently reassessed.

When contracts within a portfolio would only fall into different groups due to specific constraints imposed by law or regulation on the Company's practical ability to set a different price or level of benefits for policyholders, the Company nevertheless includes those contracts in the same group. There is currently no specific law or regulation in this regard.

For Group life and Credit life accounted for applying the premium allocation approach (PAA), the company assumes that contracts are not onerous on initial recognition, unless there are facts and circumstances indicating otherwise. The company assesses the likelihood of changes in applicable facts and circumstances to determine whether contracts not onerous on initial recognition belong to a group with no significant possibility of becoming onerous in the future.

If the facts and circumstances indicate that some contracts are onerous, the company performs an additional assessment to determine whether some contracts are onerous. In making the assessment, the company uses information about estimates provided by its internal reporting. Such information about estimates includes combined loss ratio, financial analysis available as part of management information, relevant market-wide based information indicating that the portfolio of business.

Recognition

The company recognises groups of insurance contracts issued from the earliest of the following dates:

- the beginning of the coverage period of the company of contracts;
- the date when the first payment from a policyholder in the company becomes due (in the absence of a contractual due date, this is deemed to be when the first payment is received); and
- when the company determines that a group of contracts becomes onerous.

The Company recognises only contracts issued within a one-year period meeting the recognition criteria by the reporting date. Subject to this limit, a group of insurance contracts can remain open after the end of the current reporting period and new contracts are included to the group when they meet the recognition criteria in subsequent reporting periods until such time that all contracts expected to be included within the group have been recognised.

Contract boundaries

The company includes in the measurement of a group of insurance contracts all the future cash flows expected to arise within the boundary of each of the contracts in the group.

In determining which cash flows fall within a contract boundary, the company considers its substantive rights and obligations arising from the terms of the contract, and also from applicable laws and regulations. The company determines that cash flows are within the boundary of a contract if they arise from substantive rights and obligations that exist during the reporting period in which the company can compel the policyholder to pay the premiums or the company has a substantive obligation to provide the policyholder with services.

A substantive obligation to provide services ends when:

- the company has the practical ability to reassess the risks of a particular policyholder and as a result change the price charged or the level of benefits provided for the price to fully reflect the new level of risk; or
- the boundary assessment is performed at a portfolio rather than individual contract level, there are two criteria that both need to be satisfied:

The company must have the practical ability to reprice the portfolio to fully reflect risk from all policyholders' and the company's pricing must not take into account any risks beyond the next reassessment date.

In determining whether all the risks have been reflected either in the premium or in the level of benefits, the company considers all risks that policyholders would transfer had it issued the contracts (or portfolio of contracts) at the reassessment date. Similarly, the company concludes on its practical ability to set a price that fully reflects the risks in the contract or portfolio at a renewal date by considering all the risks that it would assess when underwriting equivalent contracts on the renewal date for the remaining service. The assessment on the company practical ability to reprice existing contracts takes into account all contractual, legal and regulatory restrictions. In doing so, the company disregards restrictions that have no commercial substance. The company also considers the impact of market competitiveness and commercial considerations on its practical ability to price new contracts and repricing existing contracts. Judgement is required to decide whether such commercial considerations are relevant in concluding as to whether the practical ability exists at the reporting date.

In estimating expected future cash flows of contracts, the company applies its judgement in assessing future policyholder behaviour surrounding the exercise of options available to them such as surrenders options, and other options falling within the contract boundary.

Cash flows are within the boundaries of investment contracts with discretionary participation features if they result from a substantive obligation of the company to deliver cash at a present or future date.

The company assesses the contract boundary at initial recognition and at each subsequent reporting date to include the effect of changes in circumstances on the company's substantive rights and obligations.

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

4 Statement of material accounting policies (continued)

Measurement of insurance contracts issued

Measurement on initial recognition for contracts other than PAA

The Company measures a group of contracts on initial recognition as the sum of the expected fulfilment cash flows within the contract boundary and the contractual service margin representing the unearned profit in the contracts relating to services that will be provided under the contracts.

Fulfilment cash flows (FCF) within contract boundary

The FCF are the current unbiased and probability-weighted estimates of the present value of the future cash flows, including a risk adjustment for non-financial risk. In arriving at a probability-weighted mean, the Company considers a range of scenarios to establish a full range of possible outcomes incorporating all the reasonable and supportable information available without undue cost or effort about the amount, timing and uncertainty of expected future cash flows. The estimates of future cash flows reflect conditions existing at the measurement date including assumptions at that date about the future. The Company estimates expected future cash flows for a group of contracts at a portfolio level and then allocated them to the group in that portfolio in a systematic and rational way.

When estimating future cash flows, the Company includes all cash flows within the contract boundary including:

- premiums and any additional cash flows resulting from those premiums;
 - claims paid, reported claims that have not yet been paid, claims incurred but not yet reported, future claims expected to arise from the policy and potential cash inflows from recoveries on future claims covered by existing insurance contracts;
 - for deferred variable annuity, investment-linked insurance policies and investment contract with discretionary participation features, payments that vary based on the returns on underlying items and resulting from any embedded guarantees;
 - an allocation of insurance acquisition cash flows attributable to the portfolio to which the issued contract belongs;
 - claim handling costs;
 - costs of providing contractual benefits in kind, such as home and vehicle repair;
 - policy administration and maintenance costs including recurring commissions that are expected to be paid to intermediaries for policy administration services only (recurring commissions that are insurance acquisition cash flows are treated as such in the estimate of future cash flows);
 - transaction-based taxes that arise directly from existing insurance contracts, or that can be attributed to them on a reasonable and consistent basis;
 - an allocation of fixed and variable overheads directly attributable to the fulfilment of insurance contracts including overhead costs such as accounting, human resources, information technology and support, building depreciation, rent, and maintenance and utilities.
 - costs incurred for performing investment activities that enhance insurance coverage benefits for the policyholder; and
 - costs incurred for providing investment-related service to policyholders
- Cash inflows from recoveries (Salvage) on future claims covered by existing insurance contract to the extent that they do not qualify for recognition as separate assets, potential cash inflows from recoveries on past claims.

The company assesses, on a contract-by-contract basis, whether participating contracts meet the definition of insurance contracts with direct participation features, which need to satisfy all three of the following criteria:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the company expects to pay to the policyholder an amount equal to a substantial share of the fair value returns from the underlying items; and
- a substantial proportion of the cash flows that the company expects to pay to the policyholder should be expected to vary with the cash flows from the underlying items.

The Company recognises and measures the liability for the unpaid amounts arising from all groups in aggregate and does not allocate such fulfilment cash flows to specific groups when coverage on contracts has been provided.

The cash flow estimates include both market variables, which are consistent with observable market prices, and non-market variables, which are not contradictory with market information and based on internally and externally derived data.

The Company updates its estimates at the end of each reporting period using all newly available, as well as historic evidence and information about trends. The Company determines its current expectations of probabilities of future events occurring at the end of the reporting period. In developing new estimates, the Company considers the most recent experience and earlier experience, as well as other information.

Discount Rate

The time value of money and financial risk is measured separately from expected future cash flows with changes in financial risks recognised in profit or loss at the end of each reporting period unless the Company has elected the accounting policy to disaggregate the changes in time value of money and financial risk between profit or loss and other comprehensive income. The Company has opted not to adopt the OCI option. The time value of money and financial risk is measured separately from expected future cash flows with changes in financial risks recognised in profit or loss at the end of each reporting.

The Company measures the time value of money using discount rates that reflect the liquidity characteristics of the insurance contracts and the characteristics of the cash flows, consistent with observable current market prices and exclude the effect of factors that influence such observable market prices but do not affect the future cash flows of the insurance contracts (e.g. credit risk).

Expected future cash flows that vary based on the returns on any financial underlying items are discounted at rates that reflect this variability.

In determining discount rates for cash flows that do not vary based on the returns of underlying items, the Company uses the 'Bottom-up approach' to estimate discount rates by adjusting a liquid risk-free yield curve to reflect the differences between the liquidity characteristics of the financial instruments that underlie the rates observed in the market and the liquidity characteristics of the insurance contracts.

The Company estimates the discount rate applicable to each group of contracts on initial recognition, based on recognised contracts. In the following reporting period, as more contracts are included to the Company, result in a change to the determination of the discount rates at the date of initial recognition and the discount rate applicable to the Company on initial recognition is then revised from the start of the reporting period in which the new contracts are added to the Company.

Risk adjustment for non-financial risk

The risk adjustment for non-financial risk is the compensation the Company requires for bearing the uncertainty about the amount and timing of the cash flows arising from insurance risk and other non-financial risks such as lapse risk and expense risk. It measures the degree of variability of expected future cash flows and the Company-specific price for bearing that risk and reflects the degree of the Company's risk aversion. The Company determines the risk adjustment for non-financial risk at the Company level and then allocates it to all the groups of insurance contracts. In estimating the risk adjustment, Stanbic IBTC Insurance Limited has selected a hybrid approach that incorporates both VaR and PAD calculations for GMM, Fit Normal distribution to combined ratios or Bootstrapping for PAA and Fit Normal distribution to historical loss ratios or Bootstrapping for IBNR. The crux of the GMM RA methodology would involve calibrating the 'bottom-up' PAD calculation to produce a result materially equivalent to the 'top-down' VaR at a target confidence level. Furthermore, the calibration procedure (and hence the PAD) leads to a systematic allocation of the Risk Adjustment to the unit of account and policy level. Changes in the risk adjustment for non-financial risks are disaggregated into an insurance service component and an insurance finance or expense component.

Non-financial risk factors, often known as underwriting variables, are the primary sources of estimation uncertainty since they affect estimations of future cash flows and the probability associated with them. The company has selected a 90% confidence level for its Value at Risk estimations, which ultimately determines the overall amount and/or percentage set aside for non-financial risk as risk adjustment.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Contractual service margin (CSM)

The CSM is a component of the overall carrying amount of a group of insurance contracts representing unearned profit the Company will recognise as it provides insurance contract services over the coverage period.

At initial recognition, the Company measures the CSM at an amount that, unless a group of insurance contracts is onerous, results in no gains recognised in profit or loss arising from:

- the expected fulfilment cash flows of the group;
- the amount of any derecognised asset for acquisition cash flows allocated to the group; and any other asset or liability previously recognised for cash flows related to the group and
- any cash flows that have already arisen on the contracts as of that date.

If a group of contracts is onerous, the Company recognises a loss on initial recognition, resulting in the carrying amount of the liability for the group being equal to the fulfilment cash flows, and the CSM of the group being nil. A loss component is recognised for any loss on initial recognition of the group of insurance contracts.

Insurance acquisition cash flows

The Company includes insurance acquisition cash flows in the measurement of a group of insurance contracts if they are directly attributable to either the individual contracts in a group, or to the group itself, or the portfolio of insurance contracts to which the group belongs. The Company estimates insurance acquisition cash flows not directly attributable to the insurance contracts but directly attributable to the portfolio at a portfolio level and then allocates them to the Company of newly written and renewed contracts on a systematic and rational basis. The company adopts the same pattern of coverage units as the CSM amortization for the allocation of insurance acquisition cash flows.

The Company recognises an asset in respect of costs in securing a portfolio or group of insurance contracts, such as costs of selling and underwriting, when these costs are already paid before the recognition of the group of insurance contracts to which these costs relate to. The Company recognises such an asset for each existing or future group of insurance contracts to which insurance acquisition cash flows are allocated. Such assets are derecognised when the insurance acquisition cash flows allocated to the group of insurance contracts are included in the measurement of the group. The related portion of the asset for insurance acquisition cash flows is derecognised when the associated group of contracts is recognised, and its balance is included in the group's fulfilment cash flows. When only some of the insurance contracts expected to be included within the group is recognised as at the end of the reporting period, the Company determines the related portion of the asset that is derecognised and included in the group's fulfilment cash flows on the basis of a systematic and rational allocation method taking into consideration the timing of recognition of the contracts into the group.

At each reporting date, the Company reviews the carrying amounts of the asset for insurance acquisition cash flows to determine whether there is an indication that the asset has suffered an impairment. If any such indication exists, the Company adjusts the carrying amount of the asset so that the carrying amount of the asset does not exceed the expected net cash inflow for the associated future groups of contracts and an impairment loss is recognised in profit or loss for the difference. Where an impairment loss subsequently reverses, the carrying amount of the asset is increased to the extent the impairment conditions no longer exist or have improved and the cumulative amount of impairment loss reversal does not exceed the impairment loss recognised for the asset in prior years.

Subsequent measurement under the general model

After initial recognition, at the end of each reporting period, the carrying amount of the group of insurance contracts will reflect a current estimate of the liability for incurred claims (LIC) as at that date and a current estimate of the liability for remaining coverage (LRC).

The LRC represents the Company's obligation to investigate and pay valid claims under existing contracts for insured events that have not yet occurred, comprising (a) fulfilment cash flows relating to future service and (b) the CSM yet to be earned.

The LIC includes the Company's liability to pay valid claims for insured events that have already incurred, other incurred insurance expenses arising from past coverage service and includes the liability for claims incurred but not yet reported. It also includes the Company's liability to pay amounts the Company is obliged to pay the policyholder under the contract, including repayment of investment components, when a contract is derecognised. The current estimate of LIC comprises the fulfilment cash flows related to past service allocated to the groups at the reporting date. In estimating the total future fulfilment cash flows, the Company distinguishes between those relating to already incurred claims and those relating to future services. At the end of each reporting period, the fulfilment cash flows are updated by the Company to reflect the current estimates of the amounts, timing and uncertainty of future cash flows, as well as discount rates to ensure that the estimates measured in the statement of financial position are always current.

Experience adjustments are the difference between:

- (a) Premium received (and any related cash flows paid such as insurance acquisition cash flows and insurance premium taxes) and the estimate at the beginning of the period of the amounts expected in the period; or
- (b) The actual amounts of insurance service expenses incurred in the period (excluding insurance acquisition expenses) and the estimate at the beginning of the period of the amounts expected to be incurred in the period.

Experience adjustments relate to current or past service are recognised in profit or loss. For incurred claims (including incurred but not reported) and other incurred insurance service expenses, experience adjustments always relate to current or past service and are included in profit or loss as part of insurance service expenses. Experience adjustments relating to future service are included in the LRC by adjusting the CSM. The release of the CSM depends on whether the contract does not participate, participates indirectly, or directly participates in the performance of the specified underlying items.

Subsequent to initial recognition, the CSM of a group of insurance contracts accretes interest at the discount rates 'locked in' on initial recognition, which represent a historic curve of discount rates that were applied for initial measurement. The curve is made up of discount rates used to discount those cash flows that do not vary with the returns of the underlying items.

The carrying amount of the CSM for insurance contracts without direct participating features at the end of the reporting period is the carrying amount at the beginning of the period adjusted for:

- a) the effect of any new contracts added to the group;
- b) interest accreted on the carrying amount of CSM measured at the discount rates determined at initial recognition;
- c) the changes in fulfilment cash flows related to future service, except that:
 - such increases in fulfilment cash flows exceed the carrying amount of the CSM, giving rise to a loss that results in the group of contracts becoming onerous or more onerous; or
 - such decreases in fulfilment cash flows reverse a previously recognised loss on a group of onerous contracts;
- d) the effect of any currency exchange differences on the CSM; and
- e) the amount recognised as insurance revenue because of the transfer of insurance contract services in the period, determined by allocation of the CSM remaining at the end of the reporting period over the current and remaining coverage period.

The company adjusts for CSM in the same order documented above.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Subsequent to initial recognition, the CSM of a group of insurance contracts accretes interest at the discount rates 'locked in' on initial recognition, which represent a historic curve of discount rates that were applied for initial measurement. The curve is made up of discount rates used to discount those cash flows that do not vary with the returns of the underlying items.

The carrying amount of the CSM for insurance contracts without direct participating features at the end of the reporting period is the carrying amount at the beginning of the period adjusted for:

- a) the effect of any new contracts added to the group;
 - b) interest accreted on the carrying amount of CSM measured at the discount rates determined at initial recognition;
 - c) the changes in fulfilment cash flows related to future service, except that:
 - such increases in fulfilment cash flows exceed the carrying amount of the CSM, giving rise to a loss that results in the group of contracts becoming onerous or more onerous; or
 - such decreases in fulfilment cash flows reverse a previously recognised loss on a group of onerous contracts;
 - d) the effect of any currency exchange differences on the CSM; and
 - e) the amount recognised as insurance revenue because of the transfer of insurance contract services in the period, determined by allocation of the CSM remaining at the end of the reporting period over the current and remaining coverage period.
- The company adjusts for CSM in the same order documented above.

Changes in fulfilment cash flows

At the end of each reporting period, the Company re-estimates the LRC fulfilment cash flows, updating for changes in assumptions relating to financial and non-financial risks.

For insurance contracts without direct participating features, the following changes in fulfilment cash flows are considered to be related to future services and adjust (or 'unlock') the CSM.

- Experience adjustments relating to the premiums received in the period that relate to future services, and any related cash flows such as acquisition cash flows and premium-based taxes measured at the 'locked in' discount rates applicable when the contracts in the Company were initially recognised.
- the change in the estimate of the present value of expected future cash flows in the liability for remaining coverage measured at the 'locked in' discount rates applicable when the contracts in the Company were initially recognised.
- Changes in the risk adjustment for non-financial risk relating to future services. the Company has elected not to disaggregate the change in the risk adjustment for non-financial risk between (i) a change related to non-financial risk and (ii) the effect of the time value of money and Changes in the time value of money. If the Company made such a disaggregation, it shall adjust the CSM for the change related to non-financial risk, measured at the discount rates applicable when the contracts in the group were initially recognised.
- Differences between the amount of investment components that were expected to be payable in the period and the amount of investment components that actually became payable. Both these amounts are measured at the discount rates applicable when the contracts in the Company were initially recognised.

The following adjustments do not relate to future service and thus do not adjust the CSM:

- Changes in fulfilment cash flows for the effect of the time value of money and the effect of financial risk and changes thereof;
- Changes in the fulfilment cash flows relating to the LIC; and
- Experience adjustment relating to insurance service expenses excluding those that relate to Premium received and Insurance service expense.

If an increase in fulfilment cash flows relating to future coverage exceeds the CSM of the group, the Company recognises the difference in profit or loss as an expense, creating a 'loss component' for the group. Subsequently, any further increases in fulfilment cash flows relating to future coverage are also recognised in profit or loss as they occur, increasing the loss component of the group of insurance contracts. Any subsequent decreases in fulfilment cash flows related to future coverage do not adjust the CSM, until the loss component of the group is fully reversed through profit or loss.

Recognition of the CSM in profit or loss

An amount of the CSM is released to profit or loss in each period during which the insurance contract services are provided. In determining the amount of the CSM to be released in each period, the Company follows three steps:

- determine the total number of coverage units in the group. The amount of coverage units in the group is determined by considering for each contract the quantity of benefits provided under the contract and the expected coverage period.
- allocate the CSM at the end of the period (before any of it is released to profit or loss to reflect the insurance contract services provided in the period) equally to each of the coverage units provided in the current period and expected to be provided in the future.
- recognise in profit or loss the amount of CSM allocated to the coverage units provided during the period.

The number of coverage units changes as insurance contract services are provided, contracts expire, lapse or surrender and new contracts are added into the group. The total number of coverage units depends on the expected duration of the obligations that the Company has from its contracts, which can differ from the legal contract maturity because of the impact of policyholder behaviour and the uncertainty surrounding future insured events. In determining a number of coverage units, the Company exercises judgement in estimating the likelihood of insured events occurring and policyholder behaviours to the extent that they affect expected period of coverage in the Company, the different levels of service offered across periods (e.g. policyholder exercising an option and adding an additional coverage for a previously guaranteed price) and the 'quantity of benefits' provided under a contract. In determining the number of coverage units, the Company applies the following methods:

- For GMM products, a method based on the expected benefits for each group is applied. This method is appropriate as there is variability in the contractual cover in each period and, therefore, variability in the amount of the service provided in each period;
- For the PAA products, a method based on the passage of time is applied.

Insurance contracts under the premium allocation approach

The Company applies the PAA to the measurement of its Credit and Group life insurance contracts with a coverage period of each contract in the Company of one year or less. Where the contracts are beyond a year, a PAA eligibility test will be conducted for this product.

On initial recognition, the Company measures the LRC at the amount of premiums received in cash less of insurance acquisition cash flows at that date. For all groups of insurance contracts that PAA applies, the Company applies a policy of amortising insurance acquisition cash flows over the coverage period of the group.

The carrying amount of the LRC at the end of each subsequent reporting period represents the carrying amount at the start of the reporting period adjusted for the following:

- (i) the premiums received in the period and the amount recognised as insurance revenue for insurance contract services provided in that period;
- (ii) any amounts relating to the amortisation of insurance acquisition cash flows recognised as an expense in the reporting period; and
- (iii) any adjustment to a financing component and any investment component paid or transferred to the liability for incurred claims.

In applying PAA, Stanbic IBTC Insurance Limited has elected to recognise the acquisition cash flows for all groups of contracts over the life of the contracts.

The Company discounts the liability for remaining coverage to reflect the time value of money and financial risk for such insurance contracts where a significant financing component for products measured with PAA.

The carrying amount of the LIC is measured similar to GM. However, for those claims that the Company expects to be paid within one year or less from the date of incurring, the Company does not adjust future cash flows for the time value of money and the effect of financial risk. While claims expected to take more than one year to settle are discounted. For the purpose of discounting, the company has adopted the locked-in rate.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Applying the PAA, the insurance revenue is measured at the amount allocated from the expected premium receipts excluding any investment component. The allocation is done on the basis of the passage of time unless the expected pattern of release from risk differs significantly from the passage of time, in which case it is recognised on the expected timing of incurred claims and benefits. The Company applies judgement in determining the basis of allocation.

If facts and circumstances lead the Company to believe that a group under PAA has become onerous, the Company tests it for onerousness. If the amount of the fulfilment cash flows exceeds the carrying amount of the LRC, the Company recognise a loss in profit or loss and increases the LRC for the corresponding amount.

Onerous Contracts

The Company considers an insurance contract to be onerous if the expected fulfilment cash flows allocated to the contract plus any previously recognised acquisition cash flows and any cash flows arising from the contract at the date of initial recognition in total result in a net cash outflow. The onerous assessment is done on an individual contract level assessing future expected cash flows on a probability-weighted basis including a risk adjustment for non-financial risk. Contracts expected on initial recognition to be loss-making are grouped together and such groups are measured and presented separately. Once contracts are allocated to a group, they are not re-allocated to another group, unless they are substantively modified.

On initial recognition, the CSM of the group of onerous contracts is nil and the Company's measurement consists entirely of fulfilment cash flows. A net outflow expected from a group of contracts determined to be onerous is considered to be the group's 'loss component'. It is initially calculated when the group is first considered to be onerous and is recognised at that date in profit or loss. The amount of the group's loss component is tracked for the purposes of presentation and subsequent measurement.

After the loss component is recognised, the Company allocates any subsequent changes in fulfilment cash flows of the LRC on a systematic basis between 'loss component' and 'LRC excluding the loss component'.

The subsequent changes in the fulfilment cash flows of the LRC to be allocated are:

- insurance finance income or expense,
- changes in risk adjustment for non-financial risk recognised in profit or loss representing release from risk in the period; and
- estimates of the present value of future cash flows for claims and expenses released from the LRC because of incurred insurance service expense in the period.

the Company determines the systematic allocation of insurance service expenses incurred based on the percentage of loss component to the total outflows included in the LRC, excluding any investment component amount.

Any subsequent decreases relating to future service in fulfilment cash flows allocated to the group arising from changes in estimates of future cash flows and the risk adjustments for non-financial risk are allocated first only to the loss component, until it is exhausted. Once it is exhausted, any further decreases in fulfilment cash flows relating to future service create the group's CSM.

A group of insurance contracts becomes onerous (or more onerous) on subsequent measurement if the following amounts exceed the carrying amount of the CSM:

- (a) for a group of direct participating contracts, the decrease in the amount of the Company's share of the fair value of the underlying items; and
- (b) unfavourable changes relating to future service in the fulfilment cash flows allocated to the group, arising from changes in estimates of future cash flows and the risk adjustments for non financial risk.

For onerous groups of contracts, revenue is calculated as the amount of insurance service expense expected at the beginning of the period that form part of revenue and reflects only:

- the change in the risk adjustment for non-financial risk due to expected release from risk in the period (excluding the amount systematically allocated to the loss component);
- the estimates of the present value of future cash flows related to claims expected to incur in the period (excluding the systematic allocation to the loss component); and
- the allocation, based on the coverage units, of the portion of premiums that relates to the recovery of the insurance acquisition cash flows.

All these amounts are accounted for in reduction of the LCR excluding the loss component.

The Company recognises amounts in insurance service expense related to the loss component arising from:

- changes in fulfilment cash flows arising from changes in estimates related to future service that establish or further increase the loss component;
- subsequent decreases in fulfilment cash flows that relate to future service and reduce the loss component until it is exhausted;
- changes, for direct participating contracts only, in the entity's share of decrease in the fair value of the underlying items, that result in or further increase the loss component;
- for direct participating contracts only, subsequent increases in the entity's share of the fair value of the underlying items that reduce the loss component until it is exhausted; and
- systematic allocation to the loss component arising both from changes in the risk adjustment for nonfinancial risk and from incurred insurance services expenses.

Reinsurance contracts held

Recognition

The Company uses facultative and treaty reinsurance to mitigate some of its risks exposures. Reinsurance contracts held are accounted under IFRS 17 when they meet the definition of an insurance contract, which includes the condition that the contract must transfer significant insurance risk.

Reinsurance contracts transfer significant insurance risk only if they transfer to the reinsurer substantially all the insurance risk relating to the reinsured portions of the underlying insurance contracts, even if a reinsurance contract does not expose the issuer (reinsurer) to the possibility of a significant loss. The effect of non-performance risk of the reinsurer is assessed at each reporting date and the effect of changes in the non-performance risk is recognised in profit or loss.

Reinsurance contracts held are accounted for separately from underlying insurance contracts issued and are assessed on an individual contract basis. In aggregating reinsurance contracts held, the Company applies the general approach and disaggregates a portfolio of its reinsurance contracts held into three groups of contracts:

- a) contracts that on initial recognition have a net gain;
- b) contracts that, on initial recognition, have no significant possibility of resulting in a net gain subsequently; and
- c) any remaining reinsurance contracts held in the portfolio.

In determining the timing of initial recognition of a reinsurance contract, the Company assesses whether the reinsurance contract's terms provide protection on losses on a proportionate basis. The Company recognises a group of reinsurance contracts held that provides proportionate coverage:

- (i) at the same time as the onerous group of underlying contracts is recognised, or
- (ii) for all the other reinsurance contracts held that provide proportionate coverage, at the start of the coverage period of that group of reinsurance contracts; or at the initial recognition of any of the underlying insurance contracts, whichever is later.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

The Company recognises a group of non-proportional reinsurance contracts at the earliest of the beginning of the coverage period of the group and the date an underlying onerous group of contracts is recognised given that the company entered into the related reinsurance contract held in the group of reinsurance contracts held at or before that date.

Cash flows are within the boundary of a reinsurance contract held, if they arise from the substantive rights and obligations of the cedant that exist during the reporting period in which the Company is compelled to pay amounts to the reinsurer or has a substantive right to receive services from the reinsurer. The boundary of a reinsurance contract held includes cash flows resulting from the underlying contracts covered by the reinsurance contract. This includes cash flows from insurance contracts that are expected to be issued by the Company in the future if these contracts are expected to be issued within the boundary of the reinsurance contract held. The Company holds reinsurance agreements which allow both the reinsurer and the Company to terminate the contract at 3months notice for new business ceded. The Company includes within the contracts boundary only cash flows arising from such 3months notice period because it does not have substantive rights or obligations beyond that point.

Reinsurance contracts measured under the general model

The Company measures the reinsurance contracts held and the underlying insurance contracts issued using consistent assumptions. The Company includes in the estimates of the present value of expected future cash flows for a group of reinsurance contracts held the effect of any risk of nonperformance by the reinsurer, including the effects of any collateral and losses from disputes. The effect of non-performance risk of the reinsurer is assessed at each reporting date and the effect of changes in the non-performance risk is always recognised in profit or loss as part of the insurance service result where applicable.

In determining the asset representing the risk adjustment for non-financial risk transferred to the reinsurer, the Company assesses the amount of risk transferred by the Company to the reinsurer by calculating the risk adjustment of the underlying contracts before and after the effect of the reinsurance contracts held. The difference is then recognised as the asset representing the risk adjustment reinsured.

On initial recognition, the Company recognises any net cost or net gain on purchasing the group of reinsurance contracts held as a reinsurance CSM, unless the net cost of purchasing reinsurance coverage relates to events that occurred before the purchase of the group of reinsurance contracts, where the Company recognises such a cost immediately in profit or loss as an expense as part of insurance service result.

For a group of reinsurance contracts held covering an onerous underlying group of contracts, the Company adjusts the CSM of the group of reinsurance contracts held and recognise an income when a loss on initial recognition of an onerous group of underlying insurance contracts or on addition of onerous underlying insurance contracts to that group. A loss recovery component of the asset for the remaining coverage of a group of reinsurance contracts held is created and subsequently adjusted for any changes in the amount.

For a group of reinsurance contracts held, the Company adjusts the carrying amount of the CSM at the end of a reporting period to reflect changes in the FCF applying the same approach as for insurance contracts issued, except when the underlying contract is onerous and the change in the FCF for the underlying insurance contracts is recognised in profit and loss by adjusting the loss component. The respective changes in reinsurance contract is also recognised in profit and loss.

Reinsurance contracts held measured under the PAA

The Company measures group life and group credit life reinsurance contracts applying the PAA. Under the PAA, the initial measurement of the asset equals the reinsurance premium paid. The Company measures the amount relating to remaining service by allocating the premium paid over the coverage period of the group. For all reinsurance contracts held, the allocation is based on the passage of time.

Where the reinsurance contracts held covers a group of onerous underlying insurance contracts, the Company adjusts the carrying amount of the asset for remaining coverage and recognises a gain when, in the same period, it reports a loss on initial recognition of an onerous group of underlying insurance contracts or on additional loss from an already onerous group of underlying insurance contracts. The recognition of this gain results in the accounting for the loss recovery component of the asset for the remaining coverage of a group of reinsurance contracts held. This component is subsequently adjusted for any applicable changes.

Modification and derecognition

The Company derecognises the original contracts and recognises the modified contract as a new contract, if the terms of insurance contracts are modified and the following conditions are met:

- (a) if the modified terms were included at contract inception and the Company would have concluded that the modified contract:
 - is outside of the scope of IFRS 17;
 - results in a different insurance contract due to separating components from the host contract;
 - results in a different contract boundary; SILL consider 3 months beyond the contract boundary of the original contract as substantially different.
 - includes in a different group of contracts.
- (b) the original contract met the definition of an insurance contract with direct participation features, but the modified contract no longer meets the definition;
- (c) the original contract was accounted applying the PAA, but the modified contract no longer meets the PAA eligibility criteria for that approach.

If the contract modification meets any of the conditions, the Company performs all assessments applicable at initial recognition, derecognises the original contract and recognises the new modified contract as if it was entered for the first time.

If the contract modification does not meet any of the conditions, the Company treats the effect of the modification as changes in the estimates of fulfilment cash flows. For insurance contracts accounted for applying the GMM, a change in the estimates of fulfilment cash flows results in a revised end of period CSM (before the current period allocation). A portion of the revised end of period CSM is allocated to the current period as if the revised CSM amount applied from the beginning of the period, but reflecting the change in the coverage units due to the modification during the period. This portion is calculated using updated coverage unit amounts determined at the end of the period and weighted to reflect the fact that the revised coverage existed for only part of the current period. For insurance contracts accounted for applying the PAA, the Company adjusts insurance revenue prospectively from the time of the contract modification.

The Company derecognises an insurance contract when, and only when the contract is:

- extinguished (when the obligation specified in the insurance contract expires or is discharged or cancelled); or
- modified and derecognition criteria are met.

When the Company derecognises an insurance contract from within a group of contracts, the Company:

- Adjust the fulfilment cash flow allocated to the group to eliminate the present value of the future cash flows and risk adjustment for non-financial risk relating to the rights and obligations that have been derecognised from the group;
- Adjust the CSM of the group for the change in the fulfilment cash flows (unless it relates to the increase or reversal of the loss component);
- Adjust the number of coverage units for expected remaining insurance contract service to reflect the coverage units derecognised from the group, and recognise in profit or loss in the period the amount of CSM based on that adjusted number.

When the Company derecognises an insurance contract because it transfers the contract to a third party, the Company adjusts the CSM of the group from which the contract has been derecognised for the difference between the change in the carrying amount of the group caused by the derecognised FCF and the premium charged by the third party for the transfer.

When the Company derecognises an insurance contract due to modification, it derecognises an in-force insurance contract and recognises a new one. The Company adjusts the CSM of the group from which the modified in-force contract has been derecognised for the difference between the change in the carrying amount of the group as a result of adjustment to fulfilment cash flows due to derecognition and the premium the Company would have charged had it entered into a contract with equivalent terms as the new contract at the date of the contract modification, less any additional premium actually charged for the modification.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Presentation

The Company has presented separately in its statement of financial position the carrying amount of portfolios of insurance contracts that are assets and those that are liabilities, portfolio of reinsurance contracts held that are assets and those that are liabilities.

The Company disaggregates the amounts recognised in the statement of profit or loss and other comprehensive income into an insurance service result sub-total that comprises insurance revenue and insurance service expenses and, separately from the insurance service result, the insurance finance income or expenses.

The Company includes any assets for insurance acquisition cash flows recognised before the corresponding groups of insurance contracts are recognised in the carrying amount of the related portfolios of insurance contracts issued.

The Company does not disaggregate the change in risk adjustment for non-financial risk between a financial and non-financial portion and includes the entire change as part of the insurance service result.

Insurance revenue

As the Company provides insurance services under a group of insurance contracts issued, it reduces its LRC and recognises insurance revenue, which is measured at the amount of consideration the Company expects to be entitled to in exchange for those services.

For groups of insurance contracts measured under the GM, insurance revenue consists of the following:

→ The sum of the changes in the LRC including

a) the insurance service expense incurred in the period measured at the amounts expected at the beginning of the period, excluding:

- amounts allocated to the loss component;
- amounts relating to risk adjustment for non-financial risk not including;
- repayments of investment components;
- insurance acquisition expenses;

b) amounts related to income tax that are specifically chargeable to the policyholder

c) the change in the risk adjustment for non-financial risk, excluding:

- changes included in insurance finance income or expense as detailed in section J
- changes that relate to future service that adjust the CSM as detailed in subsequent measurement in section G2; and
- amounts allocated to the loss component of the liability for remaining coverage arising from changes in the risk adjustment for non-financial risk

recognised in profit or loss because of the release from risk.;

d) the amount of CSM for the services provided in the period;

e) experience adjustments for premium receipts (and any related cash flows such as insurance acquisition cash flows) that relate to current or past services, if any.

The portion of premiums that can be seen as recovering those acquisition cash flows are included in the insurance service expenses in each period. Both amount are measured on the same basis used for the allocation of the CSM to profit or loss under d) above.

When applying the PAA, the Company recognises insurance revenue for the period based on the passage of time by allocating premium receipts including premium experience adjustments to each period of service. However, when the expected pattern of release from risk during the coverage period differs significantly from the passage of time, then premium receipts are allocated based on the expected pattern of incurred insurance service expense. The Company issues insurance policies with different expected pattern of occurrence of claims. For those groups of contracts, revenue is recognised based on the expected pattern of claim occurrence.

At the end of each reporting period, the Company considers whether there was a change in facts and circumstances indicating a need to change, on a prospective basis, the premium receipt allocation due to changes in the expected pattern of claim occurrence for new and existing groups.

Insurance service expense

Insurance service expense arising from group insurance contracts issued comprises of:

- changes in the LIC related to claims and expenses incurred in the period excluding repayment of investment components;
- changes in the LIC related to claims and expenses incurred in prior periods (related to past service);
- other directly attributable expenses incurred in the period;
- amortisation of insurance acquisition cash flows, which is recognised at the same amount in both insurance service expense and insurance contract revenue; and
- changes in the LRC related to future service that do not adjust the CSM, because they are changes in the loss components of onerous groups of contracts.

Income or expenses from reinsurance contracts held

The Company presents income or expenses from a group of reinsurance contracts held and reinsurance finance income or expenses in profit or loss for the period separately. Income or expenses from reinsurance contracts held are split into the following two amounts:

- amount recovered from reinsurers; and
 - an allocation of the reinsurance premiums paid, provided that together they equal total income or expenses from reinsurance contracts held.
- The Company presents cash flows that are contingent on claims as part of the amount recovered from reinsurers. Ceding commissions that are not contingent on claims of the underlying contracts are presented as a deduction in the premiums to be paid to the reinsurer which is then allocated to profit or loss.

Insurance finance income and expenses

Insurance finance income or expenses present the effect of the time value of money and the change in the time value of money, together with the effect of financial risk and changes in financial risk.

The use of OCI presentation for insurance finance income and expense

The Company has an accounting policy choice to either present all of the period's insurance finance income or expenses in profit or loss or to split the amount between profit or loss and other comprehensive income (OCI). In considering the choice of presentation of insurance finance income or expenses, the Company considers the assets held for that portfolio and how they are accounted for. For all the products, the company has opted not to disaggregate insurance finance income or expenses between recognised in profit or loss and in OCI.

The Company may reassess its accounting policy choice during the duration of a group of direct participating contracts when there is a change in whether the Company holds the underlying items or no longer holds the underlying items. When such change occurs, the Company includes the amount accumulated in OCI by the date of change as a reclassification adjustment to profit or loss spread across the period of change and future periods based on the method and on the assumptions that applied immediately before the date of change.

For PAA contracts

When applying the PAA, the Company does not discount the liability for remaining coverage to reflect the time value of money and financial risk for group life and credit life with a coverage period of one year or less.

The Company adjusts the LRC for the time value of money for group life and credit life policies with a coverage period longer than one year. The Company does not disaggregates insurance finance income or expense between profit or loss and OCI.

For contracts with cash flows not affected by underlying items

For contracts with cash flows not affected by underlying items, the Company has elected to present all insurance finance income or expenses in profit or loss.

**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**

4 Statement of material accounting policies (continued)

Key sources of estimation uncertainty

The following are key estimations that the directors have utilised in the process of applying the Company's accounting policies and which have the most significant impact on the amounts recognised in financial statements.

Insurance contract assets and liabilities and reinsurance contract assets and liabilities by applying IFRS 17 to measurement of insurance contracts issued and reinsurance contracts held, the Company has made estimations in the following key areas. They form part of the overall balances of insurance contract assets and liabilities and reinsurance contract assets and liabilities:

- Future cash flows
- Discount rates
- Allocation rate for insurance finance income or expenses
- Risk adjustment for non-financial risk
- Allocation of assets for insurance acquisition cash flows to current and future groups of contracts

Every area, including the Company's estimation methods and assumptions used and other sources of estimation uncertainty are discussed below. At 30 June 2026 the Company's total carrying amount of:

- Insurance contracts issued that are liabilities was ₦83,388 million (31 December 2025 ₦72,429 million)
- Reinsurance contracts held that are assets was ₦1,460 million (31 December 2025 ₦1,165 million)

Sensitivity analysis of carrying amounts to changes in assumptions

N'million	Change in assumption	30 June 2026		31 December 2025	
		Insurance contract liabilities	Profit	Insurance contract liabilities	Profit
Mortality	+10%	72,475	1,471	72,470	1,485
Mortality	-10%	72,469	1,486	72,475	1,471
Expenses	+1%	69,554	1,858	72,475	1,471
Expenses	-1%	75,807	1,024	72,469	1,486
Yield curve	+1%	72,470	1,479	69,554	1,858
Yield curve	-1%	72,474	1,479	75,807	1,024
Interest rate	0%	-	-	72,470	1,479
Interest rate	0%	-	-	72,474	1,479

Technique for estimation of future cash flows

In estimating fulfilment cash flows included in the contract boundary, the Company considers the range of all possible outcomes in an unbiased way specifying the amount of cash flows, timing and probability of each scenario reflecting conditions existing at the measurement date, using a probability-weighted average expectation. The probability-weighted average represents the probability-weighted mean of all possible scenarios. In determining possible scenarios, the Company uses all the reasonable and supportable information available to them without undue cost and effort, which includes information about past events, current conditions and future forecasts. Cash flow estimates include both market variables directly observed in the market or derived directly from markets and non-market variables such as accident rates, average claim costs, probabilities of severe claims etc. The Company maximises the use of observable inputs for market variables and utilises internally generated company-specific data.

Method of estimating discount rates

In determining discount rates for different products, the Company uses the bottom-up approach for cash flows of non-participating contracts that do not depend on underlying items. Applying this approach, the methodology used by the company is the Bootstrap Method. The Bootstrap Method uses Treasury Bills and Coupon bearing Federal Government bonds (FGN) to determine zero coupon rates. The yield points and coupon rates were set for every six months up to the maximum available bond yields. The zero coupon rates were then developed using the yields developed using interpolation. In the model, continuous compounding was adopted and then a scale to the company's preferred compounding frequency. In adjusting for illiquidity premium, the company considers a non-zero allowance for liquidity characteristics of the liabilities as appropriate for those liabilities that are illiquid in nature.

The Company uses the Nigerian Actuary Society (NAS) yield curve in determining the discount rate used. The illiquidity risk premium is proposed to be derived by subtracting the yield to maturity on a reference asset portfolio less the risk-free rate less the credit risk premium. Based on this method the illiquidity risk premium is calculated as zero. The Company exercises judgement in assessing the appropriateness of the selected sovereign risk-free yields for which observable market information is available and which reflects the characteristics of the insurance contracts being measured.

The Company used the following yield curves to discount cash flows:

30 June 2026	1 year	5 years	10 years	20 years
Annuities	31%	23%	18%	15%
Individual life	30%	23%	16%	14%
31 December 2025	1 year	5 years	10 years	20 years
Annuities	31%	23%	18%	15%
Individual life	30%	23%	16%	14%

Estimation of allocation rate for insurance finance income or expenses

The Company does not disaggregate insurance finance income or expenses into component recognised in profit or loss and components recognised in other comprehensive income. All insurance finance income or expenses are recognised in profit or loss, thus the company has not defined any systematic allocation metrics for allocating insurance finance income or expense.

STANBIC IBTC HOLDINGS PLC
**Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026**
4 Statement of material accounting policies (continued)
4.15 New standards and interpretations not yet effective

A number of new standards are effective for the year beginning after 1 January 2026 and earlier application is permitted; however, the Group has not early adopted the new or amended standards in preparing these consolidated financial statements.

Pronouncement	
Title	IFRS 10 and IAS 28 Sale or Contribution of Assets between an Investor and its Associate or Joint Venture (amendments) The amendments address an inconsistency between the requirements in IFRS 10 and those in IAS 28, in dealing with the sale or contribution of assets between an investor and its associate or joint venture. The main consequence of the amendments is that a full gain or loss is recognised when a transaction involves a business (whether it is housed in a subsidiary or not). A partial gain or loss is recognised when a transaction involves assets that do not constitute a business, even if these assets are housed in a subsidiary. The amendments will be applied prospectively and are not expected to have a material impact on the Group's financial statements.
Effective date	Effective date of this standard deferred indefinitely
Title	Translation to a Hyperinflationary Presentation Currency (Amendments to IAS 21) In November 2025, the IASB issued Translation to a Hyperinflationary Presentation Currency (Amendments to IAS 21). The amendments clarify the requirements for translating financial statements from a non-hyperinflationary functional currency into a hyperinflationary presentation currency. The amendments require entities to translate all amounts in the financial statements, including comparative information, using the closing exchange rate at the date of the most recent statement of financial position and introduce additional disclosure requirements. The amendments are effective for annual reporting periods beginning on or after 1 January 2027, with earlier application permitted. As the amendments relate primarily to the translation and presentation of financial information, they are not expected to have a material impact on the group's financial position or financial performance. The key impact is expected to relate to financial statement presentation, disclosures, reporting processes and related governance requirements. The group is currently assessing the implementation requirements and detailed disclosure implications on its results.
Effective date	1 January 2027.
Title	Fair Value Option for Investments in Associates and Joint Ventures (Amendments to IAS 28) In June 2026, the IASB issued Amendments to the Fair Value Option for Investments in Associates and Joint Ventures, which clarify the scope of entities eligible to apply the fair value option under IAS 28 Investments in Associates and Joint Ventures. The amendments clarify that entities whose main business activity is investing in particular types of assets, as defined in IFRS 18 Presentation and Disclosure in Financial Statements, may qualify as similar entities and elect to measure investments in associates and joint ventures at fair value through profit or loss rather than applying the equity method. The amendments are intended to reduce diversity in practice and improve consistency in the application of IAS 28. The amendments are effective when an entity first applies IFRS 18, which is for annual reporting periods beginning on or after 1 January 2027, with earlier application permitted where IFRS 18 is adopted early. The amendments are not expected to have a material impact on the group's financial position or financial performance unless the group has investments in associates or joint ventures that qualify for the fair value option. The key impact is expected to relate to accounting policy elections, presentation of income and expenses in the statement of profit or loss, and related disclosure requirements. The group is currently assessing the implementation requirements and the potential impact of the amendments on its financial statements.
Effective date	1 January 2027.
Title	IFRS 20 Regulatory Assets and Regulatory Liabilities In May 2026, the IASB issued IFRS 20 Regulatory Assets and Regulatory Liabilities, a new accounting standard for entities subject to specified types of rate regulation. IFRS 20 establishes requirements for the recognition, measurement, presentation and disclosure of regulatory assets, regulatory liabilities, regulatory income and regulatory expense. The standard aims to improve the information provided to users of financial statements by reflecting the effects of timing differences arising from rate-regulated activities and enhancing comparability between entities operating in regulated industries. IFRS 20 is effective for annual reporting periods beginning on or after 1 January 2029, with earlier application permitted, and replaces IFRS 14 Regulatory Deferral Accounts. The impact of adopting IFRS 20 will depend on the nature and extent of the group's rate-regulated activities. The standard may affect the recognition and measurement of assets, liabilities, revenue and expenses arising from regulatory agreements, as well as related disclosures, reporting processes and governance requirements. The group is currently assessing the implementation requirements and the potential impact of adopting IFRS 20 on its financial statements.
Effective date	1 January 2027.
Title	IFRS 18 Presentation and Disclosure in Financial Statements: Disclosures The standard set out requirements for the presentation and disclosure of information in general purpose financial statements (financial statements) to help ensure they provide relevant information that faithfully represents an entity's assets, liabilities, equity, income and expenses. The standards requires; Entities to classify their income and expenses into five categories in the statement of profit or loss, namely operating, investing, financing, discounted operations and tax categories. Entities are also required to include a newly-defined operating profit sub-total. Entities' net profit will not change. Management-defined performance measures (MPMs) are disclosed in a single note in the financial statement. Enhance guidance is provided on how to group information in the financial statements. Entities are required to use the operating profit sub-total as the starting point for the statement of cash flows when presenting operating cash flows using the indirect methods.
Effective date	1 January 2027.
Title	IFRS 19 Subsidiaries without Public Accountability: Disclosures The standard specify the disclosure requirements an entity is permitted to apply instead of the disclosure requirements in other IFRS Accounting Standards.
Effective date	1 January 2027.

5 Segment reporting

During 2023, the group has made significant structural changes to better serve its clients. Our operating model is client led and structured around our business units, previously referred to as segments, namely: Personal & Private Banking (PPB), Business & Commercial Banking (BCB), Corporate & Investment Banking (CIB) and Insurance & Asset Management (IAM). The principal reporting segments in the Group are as follows:

Business unit

Business & Commercial Banking	The business & commercial banking (BCB) segment provides broad based client solutions for a wide spectrum of small- and medium-sized businesses as well as large commercial enterprises. Our client coverage support extends across a wide range of industries, sectors and solutions that deliver the necessary advisory, networking and sustainability support required by our clients to enable their growth. Home services - Residential accommodation financing solutions, including related value added services. Vehicle and asset finance - Comprehensive finance solutions in instalment credit, fleet management and related services across our retail and business markets.
Corporate and Investment Banking	The Corporate and Investment Banking (CIB) segment serves large companies (multinational, regional and domestic), governments, parastatals and institutional clients across Africa and internationally. Our clients leverage our in-depth sector and regional expertise, our specialist capabilities and our access to global capital markets for advisory, transactional, trading and funding support. Global markets – Trading and risk management solutions across financial markets, including foreign exchange, money markets, interest rates, equities, credit and commodities. Transactional and lending products – Comprehensive suite of cash management, international trade finance, working capital and investor services solutions. Investment banking – Full suite of advisory and financing solutions, from term lending to structured and specialised products across equity and debt capital markets.
Personal and Private Banking	The personal and private banking (PPB) segment is responsible for the end-to-end lifecycle of clients. PPB services individual clients across Nigeria. We enable our clients' daily lives by providing relevant solutions throughout their life journeys. Card and payments - Credit card facilities to individuals and businesses. Merchant acquiring services. Enablement of digital payment capabilities through various products and platforms. Mobile money and cross-border businesses. Retail lending - Comprehensive suite of lending products provided to individuals and small and medium-sized businesses. Retail transactional - Comprehensive suite of transactional, savings, payment and liquidity management solutions.
Insurance and Asset Management	The Insurance & Asset Management (IAM) segment is made up of the company's subsidiaries, whose activities involve investment management, portfolio management, unit trust/funds management, insurance brokerage, life insurance and trusteeship. Our clients, who range from individual customers to corporate and institutional clients, can leverage the Group's extensive market leading range of propositions and services to help build and protect their wealth and lifestyle.

An operating segment is a component of the Group engaged in business activities from which it can earn revenues, whose operating results are regularly reviewed by the Group's executive management in order to make decisions about resources to be allocated to segments and assessing segment performance. The Group's identification of segments and the measurement of segment results is based on the Group's internal reporting to management. Segment results include customer-facing activities and support functions.

6 Prudential disclosure and key management assumptions

Prudential disclosure:

6.1 Credit impairment losses on loans and advances

Determination of regulatory risk reserves

Provisions under the prudential guidelines are determined using the time based provisioning regime prescribed by the Revised Central Bank of Nigeria (CBN) Prudential Guidelines. This is at variance with the expected loss model required by IFRS under IFRS 9. As a result of the differences in the methodology/provision regime, there will be variances in the impairments allowances required under the two methodologies.

Paragraph 12.4 of the revised Prudential Guidelines for Deposit Money Banks in Nigeria stipulates that Banks would be required to make provisions for loans as prescribed in the relevant IFRS Standards when IFRS is adopted. However, Banks would be required to comply with the following:

Impairment allowance for loans recognised in the profit and loss account should be determined based on the requirements of IFRS. However, the IFRS impairment allowance should be compared with provisions determined under prudential guidelines and the expected impact/changes in general reserves should be treated as follows:

- * Prudential Provisions is greater than IFRS impairment allowance; the excess provision resulting should be transferred from the general reserve account to a "regulatory risk reserve".
- * Prudential Provisions is less than IFRS impairment allowance; IFRS determined provision is charged to the statement of comprehensive income. The cumulative balance in the regulatory risk reserve is thereafter reversed to the general reserve account

The company's subsidiary Stanbic IBTC Bank Limited, has complied with the requirements of the guidelines as follows:

	Note	30-Jun-26 ₦'million	31-Dec-25 ₦'million

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

Key management assumptions

Use of assumptions:

6.2 Expected credit loss on On-balance Sheet and Off-balance sheet exposures

Significant increase in credit risk

The following are considered by the Group in determining whether there has been a significant increase in credit risk on a financial instrument since initial recognition:

- Change in the probability of default from initial recognition to the reporting date.
- A 30-day past due rebuttal, requiring exposures to be classified in stage 2. It is however not considered sufficient to only look at arrears data such as days past due in considering whether there is a significant increase in credit risk and the Group would need to assess for significant increase in credit risk through other means. Arrears data are used after exhausting all other methods of determining whether there has been a significant increase in credit risk.
- Other means of considering whether there is a significant increase in credit risk includes the evaluation of internal and external credit ratings as well as information from external credit bureaus. Information about the economic sector and geographical region of the borrower are also taken into account.
- Where a single customer has more than one loan with the Group (for example, a home loan, revolving facility, vehicle and asset finance, etc.), a one customer view is taken when considering whether there has been a significant increase in credit risk. In this instance, a significant increase in the customer's credit risk on one loan account is taken into account when assessing the customer's other loan accounts. If it is assessed that there is a significant increase in credit risk in one exposure, then there is a presumption that the customer's other loans also have a significant increase in credit risk.
- In terms of IFRS 9, the Group is required to incorporate both historical experience as well as forward looking information when assessing whether an instrument's credit risk has increased significantly since initial recognition. A useful reference tool that is used in the assessment of significant increase in credit risk is the exposure's credit rating.

Low credit risk financial instruments

Management assesses whether an instrument would be considered as having a low credit risk. In this regard:

- If internal risk gradings are based on external credit risk ratings, all instruments within the 'investment grade' category would be considered as having a low credit risk.
- If internal risk gradings are not based on external credit risk ratings, internal ratings is utilised in order to determine a low credit risk threshold. The threshold reflects a low credit risk assumption from a market participant's perspective taking into account the exposure's terms and conditions.

Default

The Group has Corporate and Investment Banking (CIB) as well as Personal and Private Banking (PPB) and Business and Commercial Banking (BCB) exposures. Due to the different nature of financial instruments that the Group holds, the Group uses a single definition of default which applies to all financial assets, with implementation guidance for specific circumstances which would meet default in terms of this definition. Default is defined as follows:

- Based on objective evidence the counterparty is unlikely to pay amounts payable to the Group on due date or shortly thereafter without recourse to actions such as realisation of security; or
- the counterparty is past due (or, in the case of revolving facilities such as overdrafts, is in excess of the current limit) for more than 90 days (for the avoidance of doubt, the overdue period may be measured using either a 'days past due' or a 'number of missed payments or part thereof' approach.), on any material credit obligation to the Group, whichever occurs first.

Write-off

An impaired loan is written off once all reasonable attempts at collection have been made and there is no economic benefit expected from attempting to recover the balance outstanding.

Modified financial assets

A modification is a change to the contractual cash flows of a financial asset. It involves the renegotiation of the terms of the financial asset such that the contractual cash flows (amount, timing, basis, etc.) are changed or the contractual terms materially change the probability that the cash flows will be received (e.g. change in counterparty).

In calculating impairment losses, the Group assesses whether there has been a significant increase in the credit risk of modified financial assets that do not qualify for derecognition at the reporting date by comparing:

- the credit risk of the modified instrument at the reporting date based on the modified contractual terms; and
- the credit risk at initial recognition based on the original unmodified contractual terms.

Incorporation of forward-looking information

Forward-looking information

The process to include forward looking information into the expected credit loss impairment model when assessing whether a customer's credit risk has increased significantly, involves the following:

Building a forward looking information IFRS model: In this stage, a calculation model or expert driven approach is used to adjust the impairment requirement based on the forward looking macro-economic outlook.

Macro-economic forecast: In this stage, an alignment in the base / expected macro-economic outlook is created between the Group's stress testing, budgeting and forward looking information for the IFRS expected credit loss impairment model. The same economic base case outlook is used for all these processes and across the Group.

Review of the outcome: In this stage the outcome of the model is reviewed by Credit risk management committee (CRMC).

In certain instances, the assessment of significant increase in credit risk using forward looking information is done on a collective basis (i.e. portfolio of customers) and not on an individual basis. When demonstrated that a sufficient linkage between forward looking factors and a portfolio exist, a given factor is implemented at the appropriate level of aggregation.

Forward-looking economic expectations applied in the determination of the ECL at the reporting date

- Nigeria expected inflation rate
- Expected GDP growth rate
- Nigeria expected employment rate
- Prime lending rate

6 Key management assumptions (continued)

6.3 Fair value of financial instruments

The fair value of financial instruments, such as unlisted equity investments and certain derivatives, that are not quoted in active markets is determined using valuation techniques. Wherever possible, models use only observable market data. Where required, these models incorporate assumptions that are not supported by prices from observable current market transactions in the same instrument and are not based on available observable market data. Such assumptions include risk premiums, liquidity discount rates, credit risk, volatilities and correlations. Changes in these assumptions could affect the reported fair values of financial instruments.

Additional disclosures on fair value measurements of financial instruments are set out in notes 30.

6.4 Share-based payments

The Group has both cash and equity-settled share incentive schemes which are issued to qualifying employees based on the rules of the respective schemes. The Group uses the Black-Scholes option pricing model to determine the fair value of awards on grant date for its equity-settled share incentive schemes. The valuation of the Group's obligations with respect to its cash-settled share incentive scheme obligations is determined with reference to the parent and ultimate parent's share price, which is an observable market input. In determining the expense to be recognised for both the cash and equity-settled share schemes, the Group estimates the expected future vesting of the awards by considering staff attrition levels. The Group also makes estimates of the future vesting of awards that are subject to non-market vesting conditions by taking into account the probability of such conditions being met.

Refer to note 33.10 for further details regarding the carrying amount of the liabilities arising from the Group's cash-settled share incentive schemes and the expenses recognised in the income statement.

6.5 Intangible assets

Direct computer software development costs that are clearly associated with an identifiable and unique system, which will be controlled by the Group and have a probable future economic benefit beyond one year, are capitalised and disclosed as computer software intangible assets.

Computer software intangible assets are carried at cost less accumulated amortisation and accumulated impairment losses. The assets are tested for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. The determination of the recoverable amount of each asset requires judgement. The recoverable amount is based on the value in use and calculated by estimating future cash benefits that will result from each asset and discounting these cash benefits at an appropriate pre-tax discount rate (see note 4.6).

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

6 Key management assumptions (continued)

6.6 Recoverability of deferred tax assets:

At the end of each reporting period, Deferred Tax Asset (DTA) is assessed under IAS 12 "Income Taxes" to determine if it can be recognized or if its carrying amount needs to be adjusted. This assessment hinges on the principle that a DTA is recognized only to the extent that it is "probable" that sufficient future taxable profits will be available against which the unused tax losses and unused tax credits, or deductible temporary differences, can be utilized.

Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related future tax benefit will be realised. The most significant management assumption is the forecasts used to support the probability assessment that sufficient taxable profits will be generated by the entities in the Group in the future in order to utilise the deferred tax assets. The forecasts of taxable profits are determined based on approved budgets for future years and adjusted for any adjustments that management deems necessary and are supportable at the time of reporting. The assessment of availability of future taxable profit against which carry forward tax losses can be utilised is disclosed under Note 16.

6.7 Provisions

The Group make provisions for contingent items such as legal claims, fines, penalties and other tax penalties. The amount provided is based on the management best estimate of the amounts that will be required to settle the obligation in the event that it crystallises. Provisions is determined by discounting the expected future cash flows using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the liability. Any material difference in management best estimates will have an impact on the carrying amount of the provisions. Refer to note 27 for further details.

6.8 Investment funds

The Group acts as fund manager to a number of investment funds. Determination of whether the Group controls such an investment fund usually focuses on the assessment of the aggregate economic interest of the Group in the fund and the investors' rights to remove the fund manager. For all the investment funds managed by the Group, the trust deed empowers the investors to vote for the removal of the fund manager without cause, but subject to approval of a vast majority of all unitholders, and the Group's aggregate economic interest in each case is less than 25%. As a result, the Group has concluded that it acts as agent for the investors in all cases, and therefore has not consolidated these funds.

Further disclosure in respect of investment funds in which the Group has an interest is contained in note 14.

6.9 Depreciation and useful life of property and equipment

The estimation of the useful lives of assets is based on management's judgement. Any material adjustment to the estimated useful lives of items of property and equipment will have an impact on the carrying value of these items.

6.10 Use of estimates and judgements in applying IFRS 17

In the application of the accounting policies, the directors are required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors considered to be relevant. Actual results may differ from these estimates. The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

6.11 Right of use and lease liabilities

The group leases various offices, spaces and branches which rental contracts are typically made for fixed periods of various tenors but may have extension options. Contracts may contain both lease and non-lease components. The group allocates the consideration in the contract to the lease and non-lease components based on their relative stand-alone prices. Lease terms are negotiated on an individual basis and contain a wide range of different terms and conditions. The lease agreements do not impose any covenants other than the security interests in the leased assets that are held by the lessor. The lease payments are discounted using the interest rate implicit in the lease. If that rate cannot be readily determined, which is generally the case for leases in the group, the lessee's incremental borrowing rate is used, being the rate that the individual lessee would have to pay to borrow the funds necessary to obtain an asset of similar value to the right-of-use asset in a similar economic environment with similar terms, security and conditions. If a readily observable amortising loan rate is available to the individual lessee which has a similar payment profile to the lease, then the group entities use that rate as a starting point to determine the incremental borrowing rate

Right-of-use assets are generally depreciated over the shorter of the asset's useful life and the lease term on a straight-line basis. If the group is reasonably certain to exercise a purchase option, the right-of-use asset is depreciated over the underlying asset's useful life.

6 Key management assumptions (continued)

Insurance contract liabilities

6.12 Assessment of significance of insurance risk

The Company applies its judgement in assessing whether a contract transfers to the issuer significant insurance risk. A contract transfers significant insurance risk only if an insured event could cause the Company to pay additional amounts that are significant in any single scenario and only if there is a scenario that has commercial substance in which the issuer has a possibility of a loss on a present value basis upon an occurrence of the insured event, regardless of whether the insured event is extremely unlikely. The assessment of whether additional amounts payable on the occurrence of an insured event are significant and whether there is any scenario with commercial substance in which the issuer has a possibility of a loss on a present value basis involves significant judgement and is performed at initial recognition on a contract-by-contract basis. The type of contracts where this judgement is required are those that transfer financial and insurance risk and result in the latter being the smaller benefit provided. The application of judgement in this area is aided by the Company's processes to filter contracts where the additional amounts referred to above are more than 5% but less than 10% of the amounts paid if the insured event does not occur. Additional amounts that are less than 5% are considered by the Company as insignificant. A specialist unit conducts all these judgemental classifications under IFRS 17 to maintain consistency across the Company. This assessment is performed after the separation of non-closely related derivatives, distinct investment components and promises to transfer distinct goods and non-insurance services.

6.13 Determination of the contract boundary

The measurement of a group of insurance contracts includes all the future cash flows arising within the contract boundary. In determining which cash flows fall within a contract boundary, the Company considers its substantive rights and obligations arising from the terms of the contract, from applicable law, regulations and customary business practices. Cash flows are considered to be outside of the contract boundary if the Company has the practical ability to reprice existing contracts to reflect their reassessed risks, and if the contract's pricing for coverage up to the date of reassessment does not consider the risks beyond the reassessment date.

The Company applies its judgement in assessing whether it has the practical ability to set a price that fully reflects all the risks in the contract or portfolio.

The Company considers contractual, legal and regulatory restrictions when making its assessment and applies judgement to decide whether these restrictions have commercial substance.

6.14 Identification of portfolios

The Company defines a portfolio as insurance contracts subject to similar risks and managed together. Contracts within the same product line are expected to be in the same portfolio as they have similar risks and are managed together. The assessment of which risks are similar and how contracts are managed requires the exercise of judgement. For some product lines, where the Company acquires insurance contracts as part of a business combination or a portfolio transfer. Unlike originally issued contracts, contracts acquired in a settlement phase transfer an insurance risk of adverse claims development. The Company considers such risk to be different from contracts it originally issued and aggregates such contracts in separate portfolios by product line. For investment-linked insurance policies, the company considers groups of contracts participating in different pools of underlying items to be in different portfolios, because they are subject to different risks from underlying items. However, where different products participate in the same pool of underlying items (e.g. investment-linked insurance policies and investment contracts with discretionary participating features), these shall also be considered separate portfolios due to different insurance risks.

6.15 Level of aggregation

The Company applies judgement when distinguishing between contracts that have no significant possibility of becoming onerous and other profitable contracts.

6.16 Assessment of directly attributable cash flows

The Company uses judgement in assessing whether cash flows are directly attributable to a specific portfolio of insurance contracts. Insurance acquisition cash flows are included in the measurement of a group of insurance contracts only if they are directly attributable to the individual contracts in a group, or to the group itself, or the portfolio of insurance contracts to which the group belongs. When estimating fulfilment cash flows, the Company also allocates fixed and variable overheads fulfilment cash flows directly attributable to the fulfilment of insurance contracts.

6.17 Assessment of significance of modification

The Company derecognises the original contracts and recognises the modified contract as a new contract, if the derecognition criteria are met. The Company applies judgement to assess whether the modified terms of the contract would result in the original contract meeting the criteria for derecognition.

6.18 Level of aggregation for determining the risk adjustment for non-financial risk

IFRS 17 does not define the level at which the risk adjustment for non-financial risk should be determined. The level of aggregation for determining the risk adjustment for non-financial risk is not an accounting policy choice and requires judgement. The Company considers that the benefits of diversification occur at an issuing entity level and therefore determines the risk adjustment for non-financial risk at that level. The diversification benefit is then allocated to all groups of insurance contracts for which it has been considered in aggregate. The Company considers that the risk adjustment for non-financial risk allocated to any individual group, as the cost of uncertainty, cannot be negative. Accordingly, when determining the allocation, correlations of non-financial risk between groups are ignored. This is because they have already been considered as part of the diversification benefits in determining the overall Company-level risk adjustment. The Company allocates the total entity-level risk adjustment to groups based on the percentage of the group's expected fulfilment cash flows to the total expected fulfilment cash flows.

6.19 Selecting a method of allocation of coverage units

IFRS 17 establishes a principle for determining coverage units, not a set of detailed requirements or methods. The selection of the appropriate method for determining the amount of coverage units is not an accounting policy choice. It involves the exercise of significant judgement and development of estimates considering individual facts and circumstances. In general, the Company will apply a straight-line amortisation of CSM over the coverage period of each group of policies. Specifically, the Company selects the appropriate method on a portfolio-by-portfolio basis. In determining the appropriate method, the Company considers the likelihood of insured events occurring to the extent that they affect expected period of coverage in the group, different levels of service across the period and the quantity of benefits expected to be received by the policyholder. For contracts providing both insurance coverage and investment-related services or both insurance coverage and investment-return services, the Company exercises judgement in determining the scaling factor applied in the weighting of benefits determined at initial recognition. The weights are recalculated in each subsequent period, reflecting historical experience and changes in assumptions for future periods that are determined at the reporting date. This shall apply to contracts that do not meet the PAA eligibility criteria to which the General Measurement Models has been applied.

Total contractual cash flows	438,453	177,575	-	-

8.2 Pledged assets

The assets pledged by the Group are strictly for the purpose of providing collateral to counterparties for various transactions. These transactions include assets pledged in connection with clearing/settlement activities of the Group.

To the extent that the counterparty is permitted to sell and/or repledge the assets in the absence of default, the assets are classified in the statement of financial position as pledged assets.

Financial assets pledged as collateral for liabilities

The carrying amount of total financial assets that have been pledged as collateral for liabilities (included in amounts reflected in 8.1 above) at 30 June 2026 was ₦67,497 million (Dec. 2025: ₦35,033 million) while the balance relates to statutory pledges. The transactions in respect of which the collaterals were pledged are as follows:

(i) ₦23,700 million (Dec 2025: ₦6,150 million) was pledged with the Central Bank of Nigeria with respect to real sector funding.

(ii) ₦18,500 million (Dec. 2025: ₦18,500 million) pledged with FMDQ in respect of OTC futures.

(iii) ₦25,297 million (Dec. 2025: ₦10,383 million) pledged with Development Bank of Nigeria Plc in respect of Livestock Productivity and Resilience Support Project

10 Derivative instruments

All derivatives are classified as derivatives held for trading and measured at fair value through profit or loss.

10.1 Use and measurement of derivative instruments

In the normal course of business, the Group enters into a variety of derivative transactions for both trading and risk management purposes. Derivative financial instruments are entered into for trading purposes and for hedging foreign exchange and interest rate exposures. Derivative instruments used by the Group in both trading and hedging activities include swaps, forwards and other similar types of instruments based on foreign exchange rates and interest rates.

The risks associated with derivative instruments are monitored in the same manner as for the underlying instruments. Risks are also measured across the product range in order to take into account possible correlations.

The fair value of all derivatives is recognised on the statement of financial position and is only netted to the extent that there is both a legal right of set-off and an intention to settle on a net basis.

Swaps are transactions in which two parties exchange cash flows on a specified notional amount for a predetermined year.

The major types of swap transactions undertaken by the Group are as follows:

- (i) Foreign exchange swaps are contractual obligations between two parties to swap a pair of currencies. Foreign exchange swaps are tailor-made agreements that are transacted between counterparties in the Over-the-counter (OTC) market.
- (ii) Forwards are contractual obligations to buy or sell financial instruments or commodities on a future date at a specified price. Forward contracts are tailor-made agreements that are transacted between counterparties in the OTC market.

10.2 Derivatives held-for-trading

The Group trades derivative instruments on behalf of customers and for its own positions. The Group transacts derivative contracts to address customer demand by structuring tailored derivatives for customers. The Group also takes proprietary positions for its own account. Trading derivative products include the following derivative instruments:

10.2.1 Foreign exchange derivatives

Foreign exchange derivatives are primarily used to hedge foreign currency risks on behalf of customers and for the Group's own positions. Foreign exchange derivatives primarily consist of foreign exchange forwards.

10.2.2 Non-deliverable foreign exchange derivatives contract

Non-deliverable foreign exchange derivative contracts (NDFs) is a variation of foreign exchange derivatives described above. NDFs are cash settled and do not require physical delivery of foreign currency. The counterparties settle the difference between the contracted NDF price or rate and the prevailing spot price or rate on an agreed notional amount.

10.2.3 Interest rate derivatives

Interest rate derivatives are primarily used to modify the volatility and interest rate characteristics of interest-earning assets and interest-bearing liabilities on behalf of customers and for the Group's own positions. Interest rate derivatives primarily consist of swaps.

10.3 Unobservable valuation differences on initial recognition

Any difference between the fair value of the derivative financial instrument at initial recognition and the amount that would be determined at that date using a valuation technique in a situation in which the valuation is dependent on unobservable parameters is not recognised in profit or loss immediately but is recognised over the life of the instrument on an appropriate basis or when the instrument is redeemed. Unobservable valuation difference is disclosed under note 10.7.

10.4 Fair values

The fair value of a derivative financial instrument represents for quoted instruments the quoted market price and for unquoted instruments the present value of the positive or negative cash flows, which would have occurred if the rights and obligations arising from that instrument were closed out in an orderly market place transaction at year end.

10.5 Notional amount

The gross notional amount is the sum of the absolute value of all bought and sold contracts. The notional amounts have been translated at the closing rate at the reporting date where cash flows are receivable in foreign currency. The amount cannot be used to assess the market risk associated with the positions held but should be used only as a means of assessing the Group's participation in derivative contracts.

---	----------------	----------------	--------------	--------------

There were no movements in equity financial investment fair valued through other comprehensive income and debt financial instruments fair valued through profit or loss.

11.2 Analysis of unlisted equity investments

The Group designated certain investments shown in the following table as equity securities at FVOCI. The FVOCI designation was made because the investments are expected to be held for the long term for strategic purposes.

Unified Payment Services Ltd	463	463	-	-
FMDQ OTC Plc	294	294	-	-
Nigeria Mortgage Refinance Company Ltd	108	108	-	-
Central Securities Clearing System Plc	220	421	-	-
Nigerian Interbank Settlement System Plc	2,416	2,416	-	-
NGX (Nigerian Exchange Ltd) shares	691	88	-	-
CRC Credit Bureau	75	75	-	-
Total investment in unlisted equity investment	4,267	3,865	-	-

The movement in unquoted equities relates to fair value gains and losses.

11.3 Classification of financial investment

Financial instrument at amortised cost	365,828	330,454	-	-
Expected credit loss on amortised cost financial assets	(1,490)	(994)	-	-

13.2 Significant restrictions

The Group did not have significant restrictions on its ability to access or use its assets and settle its liabilities other than those resulting from the regulatory frameworks within which the subsidiaries operate.

The regulatory frameworks require all the subsidiaries (except Stanbic IBTC Ventures Limited) to maintain certain level of regulatory capital. In addition, the banking subsidiary (Stanbic IBTC Bank Limited) is required to keep certain levels of liquid assets, limit exposures to other parts of the Group and comply with other ratios.

For information on assets, liabilities and earnings of the subsidiaries, see Note 13.4.

13.3 Non-controlling interests (NCI) in subsidiaries

The following table summarises the information relating to the Group subsidiary that has material NCI.

Stanbic IBTC Pension Managers Limited: The principal place of business is Stanbic IBTC Towers, Walter Carrington Crescent, Victoria Island, Lagos.

	30 Jun. 2026	31 Dec. 2025

STANBIC IBTC HOLDINGS
Notes to the interim consolidated and separate financial
for the six month period ended 30 June 2026

14 Involvement with unconsolidated investment funds

The table below describes the types of investment funds that the Group does not consolidate but in which it holds an interest. The funds are not consolidated because they are not controlled by the Group.

Type of Investment funds	Nature and purpose	Interest held by the Group
Mutual funds	To generate fees from managing assets on behalf of third party investors.	Investments in units issued by the funds
	These vehicles are financed through the issue of units to investors.	Management fees

The table below sets out an analysis of the investment funds managed by the Group, their assets under management, and the carrying amounts of interests held by the Group in the investment funds. The maximum exposure to loss is the carrying amount of the interest held by the Group.

S/N	Investment fund	Asset under management		Interest held by the Group

	-	-	675	654

- (i) Amount represents a receivable from the company's registrar in respect of unclaimed dividends and forms part of the assets held against unclaimed dividend liabilities as disclosed in note 28. This is in accordance with Securities and Exchange Commission (SEC) directives requiring transfer of unclaimed dividends previously held by the registrars to the company.

STANBIC IBTC HOLDINGS PLC
Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

15 Accrued income includes receivables relating to custody transactions

(ii) Deposit for investment relates to SIBTC Bank PLC's annual commitment towards Agri-Business/Small and Medium Enterprises Investment Scheme (AGSMEIS) based on CBN guidelines. The investment scheme represents 5% of annual profit after tax appropriated from reserves (see note 21.3(b)(ii)). An amount of ₦37.53 million (Dec 2024: ₦37.53 million) has been disbursed to small and medium scale enterprises through the Bank for the period ended 30 June 2026.

(iii) Expected credit loss on other assets are computed using the simplified approach as stipulated by IFRS 9.

(iv) Account receivable includes fee receivables and short term receivables in respect of electronic payment transactions.

(v) Amount relates to unsettled dealing balances as at end of the period.

(vi) Accrued income includes receivables relating to custody transactions

(vii) Prepayments include insurance premiums paid in advance, rent paid in advance, and prepaid IT expenses

	Group		Company	
	30 Jun. 2026	31 Dec. 2025	30 Jun. 2026	31 Dec. 2025
	₦ million	₦ million	₦ million	₦ million
Movement in expected credit loss for doubtful receivables				
At start of year	23,553	19,097	49	595
Charge for the period	488	5,446	(4)	(546)
Effect of exchange rate movement	(16)	(16)	-	-
Amount written off	(12,430)	(974)	-	-
At end of year	11,595	23,553	45	49

The Group has, based on a 5 year historical period, developed a matrix for its expected credit loss. The Group has arrived at this expectation by computing the average credit loss (on financial assets) as a percentage of the average gross financial asset balance. There was no movement between provision stages during the period ended 30 June 2026.

15.2 Assets held for sale	₦ million	₦ million	₦ million	₦ million
Disposable assets	255	261	-	-
	255	261	-	-

The assets held for sale comprise repossessed residential buildings obtained by the Bank through the enforcement of legal mortgage arrangements following borrowers' defaults on loan facilities.

The properties were classified as held for sale as management is committed to a plan to dispose of the assets and recover their carrying amounts principally through sale rather than through continuing use. The repossessions arose from customers' failure to meet their contractual repayment obligations under secured lending arrangements.

The properties are available for immediate sale in their present condition and are being actively marketed to potential buyers through appointed real estate agents and other established disposal channels. Management expects the disposal of these properties to occur within the next twelve months, subject to prevailing market conditions and completion of normal sale processes.

21.3 Reserves
a) Other regulatory reserves

The other regulatory reserves includes statutory reserve and the small and medium scale industries reserve (SMEEIS) as described below.

(i) Statutory reserves

Nigerian banking and pension industry regulations require the Stanbic IBTC Bank Limited ("the bank") and Stanbic IBTC Pension Managers Ltd ("SIPML") that are subsidiary entities, to make an annual appropriation to a statutory reserve.

As stipulated by S.15(1) of the Banks and Other Financial Institution Act of 2020 (amended), an appropriation of 30% of profit after tax is made if the statutory reserve is less than paid-up share capital and 15% of profit after tax if the statutory reserve is greater than the paid up share capital. The bank (a subsidiary) transferred 15% of its profit after tax to statutory reserves as at the end of the period.

Section 81(2) of Pension Reform Act, 2014 requires SIPML to transfer 12.5% of its profit after tax to a statutory reserve.

(ii) Agri-Business / Small and medium scale industries reserve (AGSMEEIS)

The SMEEIS reserve is maintained to comply with the Central Bank of Nigeria (CBN) requirement that all licensed banks set aside a portion of the profit after tax in a fund to be used to finance equity investment in qualifying small and medium scale enterprises. Under the terms of the guideline (approved by the Bankers' Committee on 9 February 2017), participating banks shall set aside 5% of their PAT annually (see note 15 (iii)).

b) Fair value through OCI reserve

This represents unrealised gains or losses arising from changes in the fair value of FVOCI financial assets which are recognised directly in the FVOCI reserve. For equity investment under this category, such changes cannot be recycled into income statement when the financial asset is derecognised or impaired.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

21.3 Reserves (continued)

c) Regulatory risk reserve

When credit impairment on loans and advances as accounted for under IFRS using the expected loss model differ from the Prudential Guidelines set by the Central Bank of Nigeria the following adjustment is required.

(i) If the Prudential Provision is greater than IFRS impairment allowance; transfer the difference from the general reserve to a non-distributable regulatory reserve (regulatory reserve).

(ii) If the Prudential Provision is less than IFRS impairment allowance; the excess charges resulting should be transferred from the regulatory reserve account to the general reserve to the extent of the non-distributable reserve previously recognized.

Analysis of the regulatory risk reserve is disclosed under note 6.1.

d) Share based payment reserve

This represents obligations under the equity settled portion of Standard Bank South Africa's Group's share incentive scheme which enables key management personnel and senior employees to benefit from the performance of Stanbic IBTC Holdings Plc and its subsidiaries. This is not settled from Stanbic IBTC Holdings shares.

e) Retained earnings

This represents the cumulative undistributed profits of the company to date, which have not been reclassified to the other reserves.

22 Dividend

The Directors recommended the approval of a final dividend of 450 kobo per share (30 June 2026: 250 kobo per share) for the period ended 30 June 2026. Withholding tax would be deducted at the time of payment.

Other borrowings	526,890	545,257	-	-

The terms and conditions of other borrowings are as follows:

On-lending borrowings are funding obtained from Development Financial Institutions and banks which are simultaneously lent to loan customers. The Group bears the credit risk on the loans granted to customers and are under obligation to repay the lenders. Specific terms of funding are provided below:

- i The bank obtained a Central Bank of Nigeria (CBN) initiated on-lending naira facility from Bank of Industry in September 2010 at a fixed rate of 1% per annum on a tenor based on agreement with individual beneficiary customer. The facility was granted under the Power and Aviation Intervention Fund scheme and Restructuring and Refinancing Facilities scheme. Disbursement of these funds are represented in loans and advances to customers. Based on the structure of the facility, the bank assumes default risk of amount lent to its customers. The facility was not secured.
- ii The bank obtained dollar denominated long term on-lending facilities with floating rates tied to SOFR from Standard Bank Isle of Man with average tenor of 5 years. The dollar value of the facility as at 30 June 2026 was USD138 million (Dec 2025: USD258 million). The facilities have different expiry dates with the longest expiring on 30 September 2027.
- iii The bank obtained a 3% interest loan from the Central Bank of Nigeria (CBN) for the purpose of on - lending to customers under the Commercial Agricultural Credit Scheme (CACS). The tenor is also based on agreement with individual beneficiary customer. Disbursement of these funds are represented in loans and advances to customers. Based on the structure of the facility, the bank assumes default risk of amount lent to its customers.
- iv. This represents ₦1,223 million (Tranche 1), ₦1,386 million (Tranche 2) and ₦770 million (Tranche 3) on-lending facilities obtained from Nigeria Mortgage Refinance Company in June 2016, June 2019 and August 2019 respectively. Tranche 1 is priced at 15.5% while Tranche 2 and 3 are priced at 14.5%. Tranche 1 expires on 07 August 2028, Tranche 2 expires on 07 June 2033 and Tranche 3 expires on 07 August 2034.
- v. The Bank obtained a real sector support funding of ₦10.9 billion from the Central Bank of Nigeria at an interest rate of 3% for 7 years. The facilities have different expiry dates with the longest expiring on 17 June 2027.
- vi. This represents US\$75 million on-lending facility obtained in October 2020 from the British International Investment. The facility which is a senior unsecured debt is priced at 6-month SOFR + 4.0% with a maturity date of 10 November 2027
- vii. This represents long-term borrowing of USD40m priced at 6-month Term SOFR + 3.50% from the FinDev Canada with a seven-year maturity date due in January 2031.
- viii. The Ministry of Finance Incorporated Real Estate Investment Fund (MREIF) is a N1 trillion Naira-denominated, close-ended unit trust scheme established under SEC regulations in Nigeria, requiring a verifiable income, a minimum 20% equity contribution, a valid property offer letter, and a good credit report for mortgage repayment support.
- ix. This represent a \$25 million facility from DEG (Deutsche Investitions- und Entwicklungsgesellschaft mbH), a leading development finance institution dedicated to private sector growth in developing nations. Under this agreement, Stanbic IBTC will deploy the funds as sub-loans to eligible borrowers. To align with sustainable development goals, at least 50% of the facility is earmarked for SBG Sustainable Finance projects, while the remaining portion (up to 50%) will support eligible trade activities.
- x. This represent RMB 800 million three year senior debt facility with China Development Bank (CDB). Under the terms of the Facility Agreement, the loan will be priced at a fixed annual interest rate of 3.3%.
- xi. The L-PRES project is aimed at enhancing the management of the livestock sub-sector and value chain, boost productivity, food and nutrition security, income growth, social cohesion between farmers and herders, and sub-sector sustainability.
- xii. Stanbic IBTC has partnered with Family Homes Fund Limited (FHFL) to offer low cost mortgages and personalized support, aiming to empower employees to make informed housing decisions. FHFL, primarily owned by the Ministry of Finance Incorporated (51%) and Nigeria Sovereign Investment Authority (49%), seeks to catalyze long-term local currency mortgage financing by sharing risk with primary mortgage lenders. The core objective of the fund is to reduce Nigeria's housing deficit by providing accessible, low-cost residential mortgage financing through eligible financial institutions.
- xiii. The National Agricultural Development Fund (NADF) is a statutory fund established under the National Agricultural Development Fund Act, 2022, to provide financing that supports agricultural development, food production, and food security across Nigeria through participating financial institutions. Under this On-Lending Agreement, NADF provides funds to Stanbic IBTC Bank for onward lending to eligible farmers, cooperatives, and corporate bodies in the agricultural value chain at affordable financing terms.

The Group has not had any default of principal, interest or any other breaches with respect to its debt securities during the period ended 30 June 2026 (Dec 2025: Nil).

- (i) Collections and remittance payable includes ₦74,510 million (Dec 2025: ₦22,160 million) relating to balance held in respect of clearing and settlement activities for NIBSS, FMDQ over-the-counter foreign exchange transactions.
- (ii) Unclaimed balances include demand drafts not yet presented for payment by beneficiaries.
- (iii) Amount represents liability in respect of unclaimed dividends not yet claimed as at 30 June 2026 by shareholders after 15 months as per the Securities and Exchange Commission circular. The assets held for the liability are presented in note 11.1 and note 15 (ii).
- (iv) In determining the fair value of derivative instruments such as Swap contracts, all valuation inputs used by management were not directly observable which gave rise to deferral Day one gain. Day one profit or loss could arise due to the fact that the counterparty credit risk, Own credit risk and Cross-Correlation Quanto Risk inherent in the swap contracts are not directly or are indirectly observable from current market transactions in the same instrument.
- (v) Amount represents margin cash collateral for FX futures
- (vi) Lease liabilities are initially measured at the present value of the contractual payments due to the lessor over the lease term,
- (vii) Amount relates to unsettled dealing balances as at end of the period.
- (viii) Included in sundry liabilities are non-financial institution custody account ₦112,671 million (Dec 2025: ₦32,020 million).

28.2 Lease liabilities

	Group		Company	
	30 Jun. 2026	31 Dec. 2025	30 Jun. 2026	31 Dec. 2025
	₦ million	₦ million	₦ million	₦ million
Opening balance for the period	4,941	4,506	545	525
Additions	2,013	444	463	-
Finance cost	337	775	49	124
Payments during the period	(2,666)	(784)	(532)	(104)
Closing balance at end of the period	4,625	4,941	525	545

Gross contractual maturity analysis of lease liabilities

The maturity analysis is based on the remaining years to contractual maturity from year end.

	Group		Company	
	30 Jun. 2026	31 Dec. 2025	30 Jun. 2026	31 Dec. 2025
	₦ million	₦ million	₦ million	₦ million
Repayable on demand	-	-	-	-

Other liabilities (see (b) below)		-	-	-	-	13,447	-	-	-	-	13,447	13,447
		-	-	-	-	13,447	-	-	-	-	13,447	13,447

* Carrying value has been used where it closely approximates fair values. Fair value estimates are made as of a specific point in time based on the characteristics of the financial instruments and relevant market information. Where available, the most suitable measure for fair value is the quoted market price. In the absence of organised secondary markets for financial instruments, such as loans, deposits and unlisted derivatives, direct market prices are not always available. The fair value of such instruments was therefore calculated on the basis of well-established valuation techniques using current market parameters.

- (a) Other assets presented in the table above comprise financial assets only. The following items have been excluded: prepayment, indirect / withholding tax receivable, reinsurance assets, and accrued income.
- (b) Other liabilities presented in the table above comprise financial liabilities only. The following items have been excluded: deferred revenue and insurance contract liabilities.
- (c) Assessment of the fair value is not material as the carrying amount is approximately the fair value and over 70% of the assets matures within one year.

30 Fair values of financial instruments

The fair values of financial assets and financial liabilities that are traded in active markets are based on quoted market prices or dealer price quotations. For all other financial instruments, fair values are determined using other valuation techniques.

30.1 Valuation models

The Group measures fair values using the following fair value hierarchy, which reflects the significance of the inputs used in making the measurements.

Level 1 - fair values are based on quoted market prices (unadjusted) in active markets for an identical instrument.

Level 2 - fair values are calculated using valuation techniques based on observable inputs, either directly (i.e. as quoted prices) or indirectly (i.e. derived from quoted prices). This category includes instruments valued using quoted market prices in active markets for similar instruments, quoted prices for identical or similar instruments in markets that are considered less than active or other valuation techniques where all significant inputs are directly or indirectly observable from market data.

Level 3 - fair values are based on valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data and the unobservable inputs have a significant effect on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments where significant unobservable adjustments or assumptions are required to reflect differences between the instruments.

Valuation techniques include discounted cash flow models, comparison with similar instruments for which market observable prices exist, Black-Scholes and other valuation models. Assumptions and inputs used in valuation techniques include risk-free and benchmark interest rates, bonds and equity prices, foreign exchange rates, equity prices and expected volatilities and correlations.

Specific valuation techniques used to value financial instruments include:

- Quoted market prices or dealer quotes for similar instruments;
- The fair value of interest rate swaps is calculated as the present value of the estimated future cash flows based on observable yield curves;
- The fair value of forward foreign exchange contracts is determined using forward exchange rates at the balance sheet date, with the resulting value discounted back to present value;
- Other techniques, such as discounted cash flow analysis, are used to determine fair value for the remaining financial instruments.

Fair value estimates obtained from models are adjusted for any other factors, such as liquidity risk or model uncertainties, to the extent that the Group believes that a third party market participant would take them into account in pricing a transaction. For measuring derivatives that might change classification from being an asset to a liability or vice versa such as interest rate swaps, fair values take into account the credit valuation adjustment (CVA) when market participants take this into consideration in pricing the derivatives.

Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

30 Fair values of financial instruments

30.2 Valuation framework

The Group has an established control framework with respect to the measurement of fair values. This framework includes a market risk function, which has overall responsibility for independently verifying the results of trading operations and all significant fair value measurements, and a product control function, which is independent of front office management and reports to the Chief Financial Officer. The roles performed by both functions include:

- verification of observable pricing
- re-performance of model valuations;
- review and approval process for new models and changes to models
- calibration and back-testing of models against observed market transactions;
- analysis and investigation of significant daily valuation movements; and
- review of significant unobservable inputs, valuation adjustments and significant changes to the fair value measurement of level 3 instruments.

Significant valuation issues are reported to the audit committee.

30.3 Financial instruments measured at fair value - fair value hierarchy

The tables below analyse financial instruments carried at fair value at the end of the reporting year, by level of fair value hierarchy into which the fair value measurement is categorised. The amounts are based on the values recognised in the statement of financial position. See note 4.5 on accounting policies on fair value.

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

30.4 Level 3 fair value measurement (continued)

(ii) Unobservable inputs used in measuring fair value

The information below describes the significant unobservable inputs used at year end in measuring financial instruments categorised as level 3 in the fair value hierarchy.

Type of financial instrument	Fair value as at 30-June-2026 (₦ million)	Valuation technique	Significant unobservable input	Fair value measurement sensitivity to unobservable input
Unquoted equities	4,267 (2025: 3,865)	Dividend valuation method, Average maintainable earnings method, Weighted average maintainable earnings method amongst others	- Risk adjusted discount rate '- Earning capitalization rate	A significant increase in the spread above the risk free rate would result in a lower fair value.

(iii) The effect of unobservable inputs on fair value measurement (sensitivity analysis)

The table below indicates the valuation techniques and main assumptions used in the determination of the fair value of the level 3 assets and liabilities measured at fair value on a recurring basis. The table further indicates the effect that a significant change in one or more of the inputs to a reasonably possible alternative assumption would have on profit or loss at the reporting date.

	Valuation technique	Significant unobservable input	Variance in fair value measurement	Effect on OCI	
				Favourable ₦million	Unfavourable ₦million
June 2026					
Unquoted equities	Discounted cash flow	Risk adjusted discount rate	From (2%) to 2%	124	(176)
December 2025					
Unquoted equities	Discounted cash flow	Risk adjusted discount rate	From (2%) to 2%	124	(176)

30.5 Financial instruments not measured at fair value - fair value hierarchy

The following table set out the fair values of financial instruments not measured at fair value and analyses them by the level in the fair value hierarchy into which each fair value measurement is categorised.

Fair value of deposits from banks and customers is estimated using discounted cash flow techniques, applying the rates offered for deposits of similar maturities and terms. The fair value of deposits payable on demand is the amount payable at the reporting date.

31 Financial instruments subject to offsetting, enforceable master netting arrangements and similar agreements

IFRS requires financial assets and financial liabilities to be offset and the net amount presented in the statement of financial position when, and only when, the Group and company have a current legally enforceable right to set off recognised amounts, as well as the intention to settle on a net basis or to realise the asset and settle the liability simultaneously.

Accordingly, the following table sets out the impact of offset, as well as financial assets and financial liabilities that are subject to an enforceable master netting arrangement or similar agreement, irrespective of whether they have been offset in accordance with IFRS.

It should be noted that the information below is not intended to represent the Group and company's actual credit exposure, nor will it agree to that presented in the statement of financial position.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

31 Financial instruments subject to offsetting, enforceable master netting arrangements and similar agreements (continued)

Group	Gross amount of recognised financial assets ¹ ₦ million	Gross amounts of recognised financial liabilities offset in the statement of financial position ² ₦ million	Net amounts of financial assets presented in the statement of financial position ₦ million	Financial instruments, financial collateral and cash collateral ³ ₦ million	Net amount ₦ million
30 June 2026					
Assets					
Pledged assets	284,130	-	-	284,130	284,130
Derivative assets	70,350	(2,476)	67,874	(12,089)	55,785

STANBIC IBTC HOLDINGS PLC
Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026

	Group		Company	
	30 Jun. 2026	31 Dec. 2025	30 Jun. 2026	31 Dec. 2025
	₦ million	₦ million	₦ million	₦ million
32 Contingent liabilities and commitments				
32.1 Contingent liabilities				
Letters of credit	417,152	341,134	-	-
Bonds and Guarantees	351,361	294,603	-	-
	768,513	635,737	-	-

Bonds and Guarantees and letters of credit are given to third parties as security to support the performance of a customer to third parties. As the Group will only be required to meet these obligations in the event of the customer's default, the cash requirements of these instruments are expected to be considerably below their nominal amounts. The expected credit loss of ₦1,831 million (Dec 2025: ₦1,212 million) on this has been included in provisions (see note 27).

- b) An amount of ₦369 billion (Dec 2024: ₦369 billion) has been recognised as off-balance sheet pledged assets which represent 30% of the original transaction that was ceded to Stanbic IBTC Bank by Standard Bank of South Africa Limited (SBSA) in a Cross-Currency Interest Rate Swap (CCIRS) agreement with CBN involving exchange of \$1 billion for ₦1.482 billion.

32.2 Capital commitments

Contracted capital expenditure	3,171	2,964	100	256
Capital expenditure authorised but not yet contracted	35,971	53,157	8,571	12,980
	39,142	56,121	8,671	13,236

The above commitments relates to capital expenditure on property plant and equipment and the expenditure will be funded from the Group's internal resources.

32.3 Loan commitments

As at 30 June 2026, the Group had loan commitments amounting to ₦422 billion (Dec 2025: ₦451 billion) in respect of various loan contracts. The expected credit loss on the off-balance sheet exposures amounts to ₦617 million (Dec 2025: ₦237 million).

32.4 Third party funds under management and funds under administration

Members of the Group provide discretionary and non-discretionary investment management services to institutional and private investors.

Commissions and fees earned in respect of trust and management activities performed are included in profit or loss.

Assets managed and funds administered on behalf of third parties include:

	30 Jun. 2026	31 Dec. 2025
	₦ million	₦ million
Pension funds	9,326,962	8,375,600
Unit Trusts / Collective investments	4,828,784	4,254,914
Trusts and Estates	417,802	316,468
Assets held under custody - custodial services	46,623,485	31,638,959
	61,197,033	44,585,941

Income earned in fiduciary capacity are disclosed in note 33.3

32.5 Legal proceedings

In the ordinary course of business the Group is exposed to various actual and potential claims, lawsuits and other proceedings that relate to alleged errors, omissions, breaches. The Directors are satisfied, based on present information and the assessed probability of such existing claims crystallising that the Group has adequate insurance cover and / or provisions in place to meet such claims.

The Group litigation portfolio as at 30 June 2026 consisted of 482 cases and aggregate value of monetary claims against the Stanbic IBTC Group was N520,967,024,020.93; USD\$1,301,802,141.61. & GBP £1,556.07.

The claims against the Group are generally considered to have a low likelihood of success and the Group is actively defending same. Management believes that the ultimate resolution of any of the proceedings will not have a significantly adverse effect on the Group. Where the Group envisages that there is a more than average chance that a claim against it will succeed, adequate provisions are raised in respect of such claim. See note 27 for details of provisions.

Below is the distribution of cases across the hierarchy of courts;

Court Hierarchy	Number
a) Magistrate, High Court, Federal High Court and National Industrial	398
b) Court of Appeal	74
c) Supreme Court	10

In addition the Bank subsidiary is involved in litigation against AMCON, please refer to note 32.6 for further details.

32.6 Asset Management Corporation of Nigeria (AMCON) Clawback

The Bank had in December 2012 entered into an agreement with AMCON to purchase the Eligible Assets (non-performing loan) of a client, which the Bank had classified as "doubtful". AMCON confirmed its willingness to purchase the proposed Eligible Assets at a total consideration of about ₦10 billion, which sale/purchase was concluded in December of 2012. As a precondition for the sale, AMCON unequivocally stated that the pricing of the Eligible Bank Assets was subject to adjustment within twelve (12) months in line with AMCON guidelines after due diligence on information the Bank had supplied to AMCON.

AMCON by a letter dated October 4, 2017 informed the Bank of its intention to reprice the loan and claw back the sum of ₦5.7bn, being what was alleged to be excess overpaid consideration, as a result of what was felt was an overvaluation. The Bank in its response to the allegation, emphatically denied the allegations and provided evidence to AMCON to the contrary. The Bank noted that AMCON's attempt to reprice the sold Assets, were outside the 12-month claw-back period provided in AMCON's guidelines.

Notwithstanding all the clarifications made by the Bank, AMCON proceeded to apply to the Central Bank of Nigeria (CBN) to debit the Bank's account with the sum requested to be clawed back, plus possible accrued interest. Sequel to this, the CBN wrote to Stanbic IBTC on 31 July 2019, informing the Bank of AMCON's request to debit the Bank's account.

Accordingly, the Bank instructed its lawyers to institute a Legal action against AMCON, pursuant to which it obtained an interim injunction (ex-parte), restraining AMCON and the CBN from debiting its Account for the alleged claw-back sum. However, the Bank subsequently discovered that AMCON had earlier filed a suit at the Federal High Court, Lagos Division on the same subject matter. Consequently, the Bank discontinued its suit against AMCON and filed a Counter-Claim against AMCON in its suit. The matter is adjourned to 24 November 2026 for continuation of trial.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements for the six month period ended 30 June 2026

33.10 Share-based payment transactions

The Group operates a number of share-based payment arrangements under which the entity receives services from employees as a consideration for equity instrument of the Group or cash settlement based on equity instrument of the Group.

At 30 June 2026, the Group had the following share-based arrangements.

- (a) Share appreciation rights based on equity instrument of Stanbic IBTC Holdings PLC (Stanbic IBTC Equity Growth Scheme) - cash settled
- (b) Deferred bonus scheme.
- (c) Cash settled deferred bonus scheme (CSDBS)
- (d) Performance reward plan (PRP)

The expenses and liabilities recognised in respect of the share based arrangements are as follows

	Group	
	30-Jun-26 ₦ million	30-Jun-25 ₦ million
Expenses recognised in staff costs		
Stanbic IBTC Equity Growth Scheme (credit)/charge	-	-

-					

33.10 Share-based payment transactions (continued)

(b) Deferred bonus scheme (DBS)

It is essential for the Group to retain key skills over the longer term. This is done particularly through share-based incentive plans. The purpose of these plans is to align the interests of the Group, its subsidiaries and employees, as well as to attract and retain skilled, competent people.

The Group has implemented a scheme to defer a portion of incentive bonuses over a minimum threshold for key management and executives. This improves the alignment of shareholder and management interests by creating a closer linkage between risk and reward, and also facilitates retention of key employees.

All employees, who are awarded short-term incentives over a certain threshold, are subject to a mandatory deferral of a percentage of their cash incentive into the DBS. Vesting of the deferred bonus occurs after three years, conditional on continued employment at that time. The final payment of the deferred bonus is calculated with reference to the Standard Bank Group share price at payment date. To enhance the retention component of the scheme, additional increments on the deferred bonus become payable at vesting and one year thereafter. Variables on thresholds and additional increments in the DBS are subject to annual review by the remuneration committee, and may differ from one performance year to the next.

Notes to the interim consolidated and separate financial statements
for the six month period ended 30 June 2026

33.10 Share-based payment transactions (continued)

Deferred bonus scheme 2012 (DBS 2012)

In 2012, changes were made to the DBS to provide for a single global incentive deferral scheme across the Standard Bank Group (SBG). The purpose of the Deferred Bonus Scheme 2012 is to encourage a longer-term outlook in business decision-making and closer alignment of performance with long-term value creation.

All employees granted an annual performance award over a threshold have part of their award deferred. The award is indexed to the SBG's share price and accrues notional dividends during the vesting year, which are payable on vesting. The awards vest in three equal amounts at 18 months, 30 months and 42 months from the date of award. The final payout is determined with reference to the SBG's share price on vesting date.

	Group		Company

Expected life (years)	2.51	2.51	2.51	2.51

(c) Cash settled deferred bonus scheme (CSDBS)

Employees granted an annual performance award over a threshold have part of their award deferred. In addition the Group makes special awards of CSDBS to qualifying employees.

The award units are denominated in employees host countries' local currency, the value of which moves parallel to the changes in the price of the SBG shares listed on the JSE and accrue notional dividends over the vesting year which are payable on vesting.

Awards vest in three equal tranches at 18 months, 30 months and 42 months from the date of award. Final payout is determined with reference to SBG share price on vesting date.

(d) Performance reward plan (PRP)

A new performance driven share plan commenced in March 2014 which rewards value delivered against specific targets. The PRP incentivises a Group of senior executives to meet the strategic long-term objectives that deliver value to shareholders, to align the interests of those executives with those of shareholders and to act as an attraction and retention mechanism in a highly competitive marketplace for skills. The PRP operates alongside the existing conditional, equity-settled long-term plans, namely the EGS, GSIS and DBS.

STANBIC IBTC HOLDINGS PLC
Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

33.10 Share-based payment transactions (continued)

Performance reward plan (PRP)-continued

The PRP is settled in shares to the employee on the applicable vesting dates together with notional dividends that are settled in cash. The shares that vest (if any) and that are delivered to the employee are conditional on the pre-specified performance metrics.

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

40 Retirement benefit obligations

The Group operates a defined contribution pension scheme in line with the provisions of the Pension Reform Act 2024, with contributions based on the sum of employees' basic salary, housing and transport allowances in the ratio 8% by the employee and 10% by the employer. The amount contributed by the Group and remitted to the Pension Fund Administrators during the year was ₦1,075 million (June 2025: ₦1,536 million).

The Group's contribution to this scheme is charged to the income statement in the year to which it relates. Contributions to the scheme are managed by Stanbic IBTC Pension Managers Limited, and other appointed pension managers on behalf of the beneficiary staff in line with the provisions of the Pension Reform Act. Consequently, the Group has no legal or constructive obligations to pay further contributions if the funds do not hold sufficient assets to meet the related obligations to employees.

Details of transactions between the Group and the Group's post-employment contribution plans (that is, the contributory pension scheme) are listed below:

STANBIC IBTC HOLDINGS PLC

Notes to the interim consolidated and separate financial statements

for the six month period ended 30 June 2026

42 Compliance with banking and other regulations

The Group paid penalties to the Central Bank of Nigeria (CBN) during the period as follows:

- . The Central Bank of Nigeria (CBN) debited Stanbic IBTC Bank Limited's account by ₦72,000,000.00 (Seventy Two Million Naira only) on 02 April 2026 in respect of regulatory findings from its Foreign Exchange (FX) Examination for the period 01 April 2023 to 31 March 2024. The findings related to alleged deficiencies in the computation of the Net Open Position (NOP) and discrepancies between FX blotter records and reported foreign exchange positions.
- . On 09 April 2026, the Central Bank of Nigeria (CBN) imposed a penalty of ₦5,000,000.00 (Five Million Naira only) on Stanbic IBTC Bank Limited following its AML/CFT/CPF Examination for the period 01 May 2024 to 30 April 2025. The sanction related to alleged deficiencies in the Bank's ML/TF/PF Risk Assessment, including compliance with Section 11(c) of the AML/CFT/CPF Regulations. The Bank has formally appealed the sanction and provided supporting evidence of compliance with the applicable regulatory requirements.

The total penalties paid by the Group amounted to ₦77 million (Seventy Seven Million Naira) (June 2025: ₦113 million - One Hundred and Thirteen Million Naira).

43 Events after the reporting date

There were no events after the reporting date which could have a material effect on the financial position of the Group as at 30 June 2026 which have not been recognised or disclosed.

**Risk and capital management
for the six month period ended 30 June 2026**

44 Risk and capital management

Enterprise risk review

Overview

Risk Management's objective continues to align with the Group's strategic focus "to be the leading end-to-end financial solutions provider in Nigeria through innovative and customer-focused people". Effective risk management is fundamental and essential to the achievement of the Group's strategic objectives. It is also one of the pillars of the institution's strategic value drivers which entails supporting our clients by doing the right business the right way and maintaining the highest possible standards of responsible business practice using frameworks that align with regulatory expectations and standard business practices as well as procedures.

The Risk function continues its oversight and advisory responsibilities by deploying a consistent, comprehensive and strategic approach to the identification, measurement, management and reporting of enterprise-wide risks across the Group. This is executed through proactive risk management practices which ensure that the business maintains the right balance in terms of the risk-return trade off whilst limiting the negative variations that could impact the Group's capital, earnings, risk assets and appetite levels in a constantly changing and dynamic operating environment. Furthermore, Risk continues to shape, drive and monitor activities relating to risk and conduct in the institution through various measures including strengthening the risk and control environment, monitoring risk appetite and governance standards across the institution and elevating risk awareness by deploying requisite compliance training programmes for all Stanbic IBTC employees with a standard process of monitoring and escalating deficiencies in meeting the required standards. This is also in line with the established code of conduct and ethics that all members of staff must adhere and attest to on an annual basis.

The Board sets the tone and risk appetite for the organization including the tolerance levels for key risks and ensure the right risk culture is established across the institution. These risks are however managed in accordance with a set of governance standards, frameworks and policies which align with the global and industry best practices.

The Group's integrated risk management architecture, as outlined in the Enterprise Risk Management (ERM) framework, supports the evaluation and prioritisation of the risk exposures and mitigation activities in line with the Group's approved risk appetite, through prudent management of risk exposures in a way that balances the risk premium and return on equity.

The overarching approach to managing enterprise-wide risk is based on the "Three Lines of Defense" principle which requires the first line (Business risk owners) to appropriately demonstrate ownership and accountability for risks and manage same closest to the point of incidence; second line (including Risk, Compliance, and Internal Control) to review and challenge as well as provide oversight and advisory functions; and the third line (Internal Audit) to conduct assurance that control processes are fit for purpose, are implemented in accordance with standard operating procedures, and operating effectively or as intended.

Risk management framework

Approach and structure

The Group's approach to risk management is based on governance processes that rely on both individual responsibility and collective oversight that is supported by a tailored Management Information System (MIS). This approach balances corporate oversight at senior management level with independent risk management structures in the business where the business unit heads, as part of the first line of defense, are specifically responsible for the management of risk within their businesses using appropriate risk management frameworks that meet required Group minimum standards.

An important element that underpins the Group's approach to the management of all risk is independence and appropriate segregation of responsibilities between Business and Risk. Risk officers report separately to the Head of Group Risk who reports to the Chief Executive Officer of Stanbic IBTC Group and also through a matrix reporting line to the Standard Bank Group (SBG).

All principal risks are supported by the Risk department.

Governance structure

The risk governance structure provides a platform for the board, executive and senior management through the various committees to evaluate and debate material existential and emerging risks which the Group is exposed to, and assess the effectiveness of risk responses through the risk profiles of the underlying business units and functional areas (please refer to the pictorial representation of the Group risk governance structure below).

The risk-focused board committees include the statutory audit committee, board credit committee, board IT committee, board legal committee, and board risk management committee, while executive management oversight at the subsidiary and Group levels is achieved through management committees that focus on specific risks. Each of the board and management committees is governed by mandates that set out the expected committee's terms of reference.

STANBIC IBTC HOLDINGS PLC

Risk and capital management (continued) for the six month period ended 30 June 2026

Risk management framework

Governance structure^a

^aThis is continuously evolving to meet changing needs.

Risk governance standards, policies and procedures

The Group has developed a set of risk governance standards for each principal risk including credit, market, operational, IT, liquidity and compliance risks. The standards define the acceptable conditions for the assumption of the major risks and ensure alignment and consistency in the manner in which these risks are identified, measured, managed, controlled and reported, across the Group.

All standards are supported by policies and procedural documents. They are applied consistently across the bank and are approved by the Board. It is the responsibility of the business unit executive management to ensure that the requirements of the risk governance standards, policies and procedures are implemented within the business units.

Risk and capital management (continued)
for the six month period ended 30 June 2026

Risk appetite

Risk appetite is an expression of the amount, type and tenure of risk that the Group is prepared to accept in order to deliver its business objectives. It is the balance of risk and return as the Group implements business plans, whilst recognising a range of possible outcomes.

The Board establishes the Group's parameters for risk appetite by:

- providing strategic leadership and guidance;
- reviewing and approving annual budgets and forecasts for the Group and each subsidiary; and
- regularly reviewing and monitoring the Group's performance in relation to set risk appetite.

The risk appetite is defined by several metrics which are then converted into limits and triggers across the relevant risk types, at both entity and business line levels, through an analysis of the risks that impact them.

Stress testing

Stress testing serves as a diagnostic and forward looking tool to improve the Group's understanding of its credit; market, liquidity and operational risks profile under event based scenarios.

Management reviews the outcome of stress tests and selects appropriate mitigating actions to minimize and manage the impact of the risks to the Group.

Residual risk is then evaluated against the risk appetite.

The Group's enterprise risk management framework is designed to govern, identify, measure, manage, control and report on the principal risks to which the Group is exposed. The principal financial risks are defined as follows:

Credit risk

Credit risk arises primarily in the Group operations where an obligor / counterparty fails to perform in accordance with agreed terms or where the counterparty's ability to meet such contractual obligation is impaired.

Credit risk comprises counterparty risk, wrong-way risk, settlement risk, country risk and concentration risk.

Counterparty risk

Counterparty risk is the risk of loss to the Group as a result of failure by a counterparty to meet its financial and/or contractual obligations to the Group. It has three components:

- primary credit risk which is the exposure at default (EAD) arising from lending and related banking product activities, including their underwriting;
- pre-settlement credit risk which is the EAD arising from unsettled forward and derivative transactions, arising from the default of the counterparty to the transaction and measured as the cost of replacing the transaction at current market rates; and
- issuer risk which is the EAD arising from traded credit and equity products, and including their underwriting.

Wrong-way risk

Wrong-way risk is the risk that arises when default risk and credit exposure increase together. There are two types of wrong-way risk as follows: specific wrong way risk (which arises through poorly structured transactions, for example, those collateralized by own or related party shares) and general wrong way risk (which arises where the credit quality of the counterparty may for non-specific reasons be held to be correlated with a macroeconomic factor which also affects the credit quality of the counterparty).

Settlement risk

Settlement risk is the risk of loss to the Group from a transaction settlement, where value is exchanged, failing such that the counter value is not received in whole or part.

Country and cross border risk

Country and cross border risk is the risk of loss arising from political or economical conditions or events in a particular country which reduce the ability of counterparties in that particular country to fulfill their obligations to the Group.

Cross border risks is the risk of restriction on the transfer and convertibility of local currency funds, into foreign currency funds thereby limiting payment by offshore counterparties to the Group.

Risk and capital management (continued) for the six month period ended 30 June 2026

Concentration risk

Concentration risk refers to any single exposure or Group of exposures large enough to cause credit losses which threaten the Group's capital adequacy or ability to maintain its core operations. It is the risk that common factors within a risk type or across risk types cause credit losses or an event occurs within a risk type which results to credit losses.

Market risk

Market risk is defined as the risk of a change in the actual or effective market value or earnings of a portfolio of financial instruments caused by adverse movements in market variables such as equity, bond and commodity prices, foreign exchange rates, interest rates, credit spreads, recovery rates, correlations and implied volatilities in the market variables. Market risk covers both the impact of these risk factors on the market value of traded instruments as well as the impact on the Group's net interest margin as a consequence of interest rate risk on banking book assets and liabilities.

Managing interest rate benchmark reform and associated risks

The Group adopted the interest rate benchmarks including the replacement of some interbank offered rates (IBORs) with alternative "risk-free" reference rates as part of its IBOR reform program. The Group's main IBOR exposures as at 31 December 2021 were indexed to the Euro, GBP and USD LIBOR.

The alternative reference rates for Euro LIBOR adopted by the Group is the EURIBOR while the GBP and USD LIBOR alternative reference rates are the Sterling Overnight Index Average (SONIA) the Secured Overnight Financing Rate (SOFR) respectively.

Amendments to financial instruments with contractual terms indexed to the EUR and GBP LIBORs were transitioned such that they incorporate the new benchmark rates and the transitioning were completed by 31 December 2021. The transition of USD LIBOR exposures to the SOFR benchmark rate has been extended to 31 December 2024 by the Alternative Reference Rate Committee (ARRC). This only applies to certain USD LIBOR tenures such as (o/n, 1-month, 3-month, 6-month, 12-month).

REGION	LIBOR					ALTERNATIVE "RISK-FREE" REFERENCE RATES				
	Reference rate	Rate economics	Terms	Administrator		Reference rate	Rate economics	Term	Administrator	
	GBP LIBOR	Unsecured lending	7 different tenors: ON 1W 1M 2M 3M 6M 12 M	ICE Benchmark Administration	→	Sterling Overnight Index Average (SONIA)	Unsecured borrowing		Bank of England (BoE)	- LIBOR is a forward-looking term rate published for 7 different tenors, whilst the Risk-Free Rates are overnight rates with interest calculated in arrears through specific calculation methodologies. - LIBOR incorporates credit risk and liquidity premiums while Risk-Free Rates are nearly risk free. - Term rates version for SONIA and SOFR have also been developed and endorsed for the loans market as an alternative to the overnight rates.
	USD LIBOR	Unsecured lending			→	Secured Overnight Financing Rate (SOFR)	Secured borrowing		Federal Reserve Bank of New York	
	EUR LIBOR	Unsecured lending			→	Euro Short-Term Rate (€STR)	Unsecured borrowing	Term rates now endorsed for SONIA and SOFR	European Central Bank (ECB)	
	CHF LIBOR	Unsecured borrowing			→	Swiss Average Rate Overnight (SARON)	Secured borrowing		SIX Swiss Exchange	
	JPY LIBOR	Unsecured borrowing			→	Tokyo Overnight Average Rate (TONA)	Unsecured borrowing		Bank of Japan (BoJ)	

In accordance with the transition provisions, the amendments have been adopted retrospectively to financial instruments only as the Group has no hedging transactions referencing these IBORs. Comparative amounts have not been restated, and there was no impact on the current year opening reserves amounts on adoption.

During the year, management established a steering committee, consisting of key finance, risk, IT, treasury, legal, marketing, credit, compliance and business segment personnel, to oversee the Group's LIBOR transition plan. This steering committee put in place a transition project for those contracts which reference LIBOR to transition them to the alternative reference rates, with the aim of minimizing the potential disruption to business and mitigating operational and conduct risks and possible financial losses. This transition project considered changes to systems, processes, risk management and valuation models, as well as managing related tax and accounting implications.

**Risk and capital management (continued)
for the six month period ended 30 June 2026**

As at 30 June 2026, changes required to systems, processes and models have been identified and have been implemented. There have been general communications with counterparties on the IBOR reform and specific changes to contracts as required by the IBOR transition plan have also been agreed with and executed by clients.

Financial instruments measured using amortized

'Phase 2' of the amendments requires that, for financial instruments measured using amortized cost measurement (that is, financial instruments classified as amortized cost and debt financial assets classified as FVOCI), changes to the basis for determining the contractual cash flows required by interest rate benchmark reform are reflected by adjusting their effective interest rate. No immediate gain or loss is recognized. These expedients are only applicable to changes that are required by interest rate benchmark reform, which is the case if, and only if, the change is necessary as a direct consequence of interest rate benchmark reform and the new basis for determining the contractual cash flows is economically equivalent to the previous basis (that is, the basis immediately preceding the change).

Where some or all of a change in the basis for determining the contractual cash flows of a financial asset and liability does not meet the above criteria, the above practical expedient is first applied to the changes required by interest rate benchmark reform, including updating the instrument's effective interest rate. Any additional changes are accounted for in the normal way (that is, assessed for modification or derecognition, with the resulting modification gain / loss recognized immediately in profit or loss where the instrument is not derecognized).

Effect of IBOR reform

The Group has fully transitioned to IBOR as at reporting date.

**Risk and capital management (continued)
for the six month period ended 30 June 2026**

Liquidity risk

Liquidity risk is defined as the risk that the Group, although balance-sheet solvent, cannot maintain or generate sufficient cash resources to meet its payment obligations in full as they fall due (as a result of funding liquidity risk), or can only do so at materially disadvantageous terms (as a result of market liquidity risk).

Funding liquidity risk refers to the risk that the counterparties, who provide the Group with funding, will withdraw or not roll-over that funding.

Market liquidity risk refers to the risk of a generalised disruption in asset markets that makes normal liquid assets illiquid and the potential loss through the forced-sale of assets resulting in proceeds being below their fair market value.

Credit risk

Principal credit standard and policies

The Group's Governance Standard, as reviewed regularly, sets out the broad overall principles to be applied in credit risk decisions and sets out the overall framework for the consistent and unified governance, identification, measurement, management and reporting of credit risk in the Group.

The Corporate and Investment Banking (CIB), Business and Commercial Banking (BCB) and Personal and Private Banking (PPB) Global Credit Policies have been designed to expand the Group Credit Risk Governance Standard requirements by embodying the core principles for identifying, measuring, approving, and managing credit risk. These policies provide a comprehensive framework within which all credit risk emanating from the operations of the bank are legally executed, properly monitored and controlled in order to minimize the risk of financial loss; and assure consistency of approach in the treatment of regulatory compliance requirements.

In addition to the Credit Risk Governance Standard, CIB, BCB and PPB Global Credit Policies, a number of related credit policies and documents have been developed, with contents that are relevant to the full implementation and understanding of the credit policies.

Methodology for risk rating

Internal counterparty ratings and default estimates that are updated and enhanced from time-to-time play an essential role in the credit risk management and decision-making process, credit approvals, internal capital allocation, and corporate governance functions. Ratings are used for the following purposes:

- Credit assessment and evaluation
- Credit monitoring
- Credit approval and delegated authority
- Economic capital calculation, portfolio and management reporting
- Regulatory capital calculation
- RARORC (Risk-Adjusted Return on Regulatory Capital) calculation
- Pricing: PDs, EADs, and LGDs may be used to assess and compare relative pricing of assets/facilities, in conjunction with strategic, relationship, market practice and competitive factors.

STANBIC IBTC HOLDINGS PLC

Risk and capital management (continued) for the six month period ended 30 June 2026

Methodology for risk rating (continued)

The starting point of all credit risk assessment and evaluation lies in the counterparty risk grading, which is quantified and calculated in compliance with the Group's credit rating policy and using such Basel-2 compliant models as are in current use and which are updated or enhanced from time to time.

Credit risk quantification for any exposure or portfolio is summarised by the calculation of the expected loss (EL), which is arrived at in the following way:

- Based on the risk grading foundation which yields the counterparty's probability of default (PD), the nature and quantum of the credit facilities are considered;
- A forward-looking quantification of the exposure at default (EAD) is determined in accordance with Group standard guidelines.
- Risk mitigants such as security and asset recovery propensities are then quantified to moderate exposure at default to yield the loss given default (LGD).
- Finally, the EL is a function of the PD, the LGD and the EAD.

These parameters are in turn used in quantifying the required regulatory capital reserving, using the Regulatory Capital Calculator developed, maintained and updated in terms of Basel 2, and the economic capital implications through the use of Credit Portfolio Management's (CPM's) Economic Capital tools. Furthermore, bearing in mind the quantum of the facility and the risk/reward thereof, an appropriate consideration of Basel 2 capital requirements (where applicable) and the revenue and return implications of the credit proposal.

Framework and governance

Credit risk remains a key component of financial risks faced by any bank given the very nature of its business. The importance of credit risk management cannot be over emphasised as consequences can be severe when neglected. The Group has established governance principles to ensure that credit risk is managed effectively within a comprehensive risk management and control framework.

In reaching credit decisions and taking credit risk, both the credit and business functions must consistently and responsibly balance risk and return, as return is not the sole prerogative of business neither is credit risk the sole prerogative of credit. Credit (and the other risk functions, as applicable) and business must work in partnership to understand the risk and apply appropriate risk pricing, with the overall aim of optimising the bank's risk adjusted performance.

The reporting lines, responsibilities and authority for managing credit risk in the Group are clear and independent. However, ultimate responsibility for credit risk rests with the board.

Credit risk mitigation

Credit risk mitigation is defined as all methods of reducing credit expected loss whether by means of reduction of EAD (e.g. netting), risk transfer (e.g. guarantees) or risk transformation.

Guarantees, collateral and the transaction structures are used by the Group to mitigate credit risks both identified and inherent though the amount and type of credit risk is determined on a case by case basis. The Group's credit policy and guidelines are used in a consistent manner while security is valued appropriately and reviewed regularly for enforceability and to meet changing business needs.

The credit policy establishes and defines the principles of risk transfer, transformation and reduction. The processes and procedures for accepting, verifying, maintaining, and releasing collateral are well documented in order to ensure appropriate application of the collateral management techniques.

Credit risk measurement

A key element in the measurement of credit risk is the assignment of credit ratings, which are used to determine expected defaults across asset portfolios and risk bands. The risk ratings attributed to counterparties are based on a combination of factors which cover business and financial risks:

The Group uses the PD Master Scale rating concept with a single scale to measure the credit riskiness of all counterparty types. The grading system is a 25-point scale, with three additional default grades.

Group's rating	Grade description	Standard & Poor's	Fitch
SB01 - SB12/SB13	Investment grades	AAA to BBB-	AAA to BBB-
SB14 - SB21	Sub Investment grades	BB+ to CCC+	BB+ to CCC+
SB22 – SB25	Cautionary grade	CCC to C	CCC to C

Risk and capital management (continued)
for the six month period ended 30 June 2026
IFRS 7

The tables that follow analyse the credit quality of loans and advances measured in terms of IFRS 9.

Impairment model

IFRS 9 requires the recognition of expected credit losses (ECL) rather than incurred losses under the previous IAS 39. This applies to all financial debt instruments held at amortised cost, fair value through other comprehensive income (FVOCI), undrawn loan commitments and financial guarantees.

Staging of financial instruments

Financial instruments that are not already credit-impaired are originated into stage 1 and a 12-month expected credit loss allowance is recognised.

Instruments will remain in stage 1 until they are repaid, unless they experience significant credit deterioration (stage 2) or they become credit-impaired (stage 3).

Instruments will transfer to stage 2 and a lifetime expected credit loss allowance recognised when there has been a significant change in the credit risk compared with what was expected at origination.

Instruments are classified as stage 3 when they become credit-impaired.

The framework used to determine a significant increase in credit risk is set out below.

The accounting policies under IFRS 9 are set out in Note 4.3 Financial instruments. The main methodology principles and approach adopted by the Group are set out below;

Approach to determining expected credit losses

The accounting policies under IFRS 9 are set out in Note 4.3 Financial instruments. The main methodology principles and approach adopted by the bank are set out in the following table with cross references to other sections.

For portfolios that follow a standardised regulatory approach, the Group has developed new models where these portfolios are material.

Incorporation of forward looking information

The determination of expected credit loss includes various assumptions and judgements in respect of forward looking macroeconomic information.

Significant increase in credit risk ('SICR')

Expected credit loss for financial assets will transfer from a 12 month basis to a lifetime basis when there is a significant increase in credit risk (SICR) relative to that which was expected at the time of origination, or when the asset becomes credit impaired. On transfer to a lifetime basis, the expected credit loss for those assets will reflect the impact of a default event expected to occur over the remaining lifetime of the instrument rather than just over the 12 months from the reporting date.

SICR is assessed by comparing the risk of default of an exposure at the reporting date with the risk of default at origination (after considering the passage of time). 'Significant' does not mean statistically significant nor is it reflective of the extent of the impact on the Group's financial statements. Whether a change in the risk of default is significant or not is assessed using quantitative and qualitative criteria, the weight of which will depend on the type of product and counterparty.

The Group uses a mix of quantitative and qualitative criteria to assess SICR.

Risk and capital management (continued)
for the six month period ended 30 June 2026
IFRS 7 (Continue)
Assessment of credit-impaired financial assets

Credit-impaired financial assets comprise those assets that have experienced an observed credit event and are in default. Default represents those assets that are at least 90 days past due in respect of principal and interest payments and/or where the assets are otherwise considered unlikely to pay.

Unlikely to pay factors include objective conditions such as bankruptcy, debt restructuring, fraud or death. It also includes credit-related modifications of contractual cash flows due to significant financial difficulty (forbearance) where the bank has granted concessions that it would not ordinarily consider.

Modified financial assets

Where the contractual terms of a financial instrument have been modified, and this does not result in the instrument being derecognised, a modification gain or loss is recognised in the income statement representing the difference between the original cash flows and the modified cash flows, discounted at the original effective interest rate. The modification gain/loss is directly applied to the gross carrying amount of the instrument.

If the modification is credit related, such as forbearance or where the Group has granted concessions that it would not ordinarily consider, then it will be considered credit-impaired. Modifications that are not credit related will be subject to an assessment of whether the asset's credit risk has increased significantly since origination by comparing the remaining lifetime probability of default (PD) based on the modified terms with the remaining lifetime PD based on the original contractual terms.

Transfers between stages

Assets will transfer from stage 3 to stage 2 when they are no longer considered to be credit-impaired. Assets will not be considered credit-impaired only if the customer makes payments such that they are paid to current in line with the original contractual terms. In addition:

- Loans that were subject to forbearance measures must remain current for 12 months before they can be transferred to stage 2;
- Retail loans that were not subject to forbearance measures must remain current for 180 days before they can be transferred to stage 2 or stage 1.

Assets may transfer to stage 1 if they are no longer considered to have experienced a significant increase in credit risk. This will occur when the original PD based transfer criteria are no longer met (and as long as none of the other transfer criteria apply). Where assets were transferred using other measures, the assets will only transfer back to stage 1 when the condition that caused the significant increase in credit risk no longer applies (and as long as none of the other transfer criteria apply).

Governance and application of expert credit judgement in respect of expected credit losses

The determination of expected credit losses requires a significant degree of management judgement which is being assessed by the Credit Risk Management Committee (CRMC).

*This section relates to loans and advances in stage 1 and 2 with over due balances

Renegotiated loans and advances

Renegotiated loans and advances are exposures which have been refinanced, rescheduled, rolled over or otherwise modified due to weaknesses in the counterparty's financial position, and where it has been judged that normal repayment will likely continue after the restructure. Renegotiated loans that would otherwise be past due or impaired amounted to N120 billion as at 30 June 2026 (Dec 2025: N120 billion).

Collateral

The table that follows shows the financial effect that collateral has on the Group's maximum exposure to credit risk. The table is presented according to Basel II asset categories and includes collateral that may not be eligible for recognition under Basel II but that management takes into consideration in the management of the Group's exposures to credit risk. All on- and off-balance sheet exposures which are exposed to credit risk, including non-performing assets, have been included.

Collateral includes:

- financial securities that have a tradable market, such as shares and other securities;
- physical items, such as property, plant and equipment; and
- financial guarantees, suretyships and intangible assets.

All exposures are presented before the effect of any impairment provisions.

In the retail portfolio, 44% (Dec 2024: 53%) is collateralised. Of the Group's total exposure, 83% (Dec 2024: 84%) is unsecured and mainly reflects exposures to well-rated corporate counterparties, bank counterparties and sovereign entities.

Credit provisioning based on prudential guidelines

In accordance with the Prudential Guidelines issued by the Central Bank of Nigeria, provision against credit risk is as follows.

Non performing accounts

Interest and/or principal outstanding for over:	Classification	Minimum provision
Pass due date but less than 90 days	Watchlist	0%
90 days but less than 180 days	Substandard	10%
180 days but less than 360 days	Doubtful	50%
Over 360 days	Lost	100%

When a loan is deemed uncollectible, it is written off against the related provision for impairments. Subsequent recoveries are credited to the provision for loan losses in the profit and loss account. If the amount of the impairment subsequently decreases due to an event occurring after the write-down, the release of the provision is credited as a reduction of the provision for impairment in the statement of profit or loss.

Performing accounts

A minimum of 2% general provision on performing loans is made in accordance with the Prudential Guidelines.

Prudential guidelines disclosures

Had the Prudential Guidelines been employed in the preparation of these financial statements, the impairments for loans and advances to customers as well as related disclosures, would have been made as follows:

	Group	
	30 June 2026 ₦ million	31 Dec. 2025 ₦ million
Prudential disclosure of loan and advances to customers	2,673,602	2,460,336
Gross customer exposure for loans and advances	2,673,602	2,460,336
Mortgage loans	70,537	43,238
Vehicle and assets financing	135,276	120,819
Card debtors	4,287	5,610
Overdrafts and other demand loans	559,030	542,258
Other term loans	1,904,472	1,748,411
Interest in suspense	(12,799)	(9,500)
Credit impairments for loans and advances	(105,811)	(105,811)
Specific provision	(58,129)	(58,129)
General provision	(47,682)	(47,682)
Net loans and advances to customers	2,554,992	2,345,025
Prudential disclosure of loan classification		
Performing	2,600,653	2,376,696
Non performing loans	72,949	83,640
Substandard	16,876	20,782
Doubtful	2,173	27,126
Loss	53,900	35,732
Total performing and non performing loans	2,673,602	2,460,336
Adjustment for Interest in suspense and below-market interest staff loans	(12,799)	(9,500)
Customer exposure for loans and advances	2,660,803	2,450,836
Non-performing loan ratio (Regulatory)	2.73%	3.40%

Liquidity risk**Framework and governance**

The nature of banking and trading activities results in a continuous exposure to liquidity risk. Liquidity problems can have an adverse impact on a Group's earnings and capital and, in extreme circumstances, may even lead to the collapse of a Group which is otherwise solvent.

The Group's liquidity risk management framework is designed to measure and manage the liquidity position at various levels of consolidation such that payment obligations can be met at all times, under both normal and considerably stressed conditions. Under the delegated authority of the board of Directors, the Asset and Liability Committee (ALCO) sets liquidity risk policies in accordance with regulatory requirements, international best practice and SBG stated risk appetite.

Tolerance limits, appetite thresholds and monitoring items are prudently set and reflect the Group's conservative appetite for liquidity risk. ALCO is charged with ensuring ongoing compliance with liquidity risk standards and policies. The Group must, at all times, comply with the more stringent of Standard Bank imposed tolerance limits or regulatory limits.

Liquidity and funding management

A sound and robust liquidity process is required to measure, monitor and manage liquidity exposures. The Group has incorporated the following liquidity principles as part of a cohesive liquidity management process:

- structural liquidity mismatch management;
- long-term funding ratio;
- maintaining minimum levels of liquid and marketable assets;
- depositor restrictions;
- local currency loan to deposit ratio;
- foreign currency loan to deposit ratio;
- interbank reliance limit;
- intra-day liquidity management;
- collateral management;
- daily cash flow management;
- liquidity stress and scenario testing; and
- funding plans;
- liquidity contingency planning.

The cumulative impact of these principles is monitored, at least monthly by ALCO through a process which is underpinned by a system of extensive controls. The latter includes the application of purpose-built technology, documented processes and procedures, independent oversight and regular independent reviews and evaluations of the effectiveness of the system.

The Group ensures that the banking entity (Stanbic IBTC Bank Limited) is within the regulatory liquidity ratio of 30% on a daily basis.

Liquidity ratio	June-26	December-25
Minimum	73.03%	67.15%
Average	162.15%	86.75%
Maximum	216.92%	107.60%
As at year end	186.95%	71.22%

The minimum, average and maximum liquidity ratios presented in the table above are derived from daily liquidity ratio computations.

Structural liquidity mismatch management

The mismatch principle measures the Group's liquidity by assessing the mismatch between its inflow and outflow of funds within different time bands on a maturity ladder. The structural liquidity mismatch is based on behaviourally-adjusted cash flows which factors a probability of maturity into the various time bands. As expected cash flows vary significantly from the contractual position, behavioural profiling is applied to assets, liabilities and off-balance sheet items with an indeterminable maturity or drawdown year.

A net mismatch figure is obtained by subtracting liabilities and netting off-balance sheet positions from assets in each time band. The Group's liquidity position is assessed by means of the net cumulative mismatch position, while its liquidity mismatch performance is an aggregation of the net liquidity position in each successive time band expressed as a percentage of total funding related to deposits.

Maintaining minimum levels of liquid and marketable assets

Minimum levels of prudential liquid assets are held in accordance with all prudential requirements as specified by the regulatory authorities. The Group needs to hold additional unencumbered marketable assets, in excess of any minimum prudential liquid asset requirement, to cater for volatile depositor withdrawals, draw-downs under committed facilities, collateral calls, etc.

The following criteria apply to readily marketable securities:

- prices must be quoted by a range of counterparties;
- the asset class must be regularly traded;
- the asset may be sold or repurchased in a liquid market, for payment in cash; and
- settlement must be according to a prescribed, rather than a negotiated, timetable.

Depositor concentration

To ensure that the Group does not place undue reliance on any single entity as a funding source, restrictions are imposed on the short dated (0 – 3 months term) deposits accepted from any entity. These include:

- the sum of 0 – 3 month deposits and standby facilities provided by any single deposit counterparty must not, at any time, exceed 10% of total funding related liabilities to the public; and
- the aggregate of 0 – 3 month deposits and standby facilities from the 10 largest single deposit counterparties must not, at any time, exceed 20% of total funding related liabilities to the public.

Concentration risk limits are used to ensure that funding diversification is maintained across products, sectors, and counterparties. Primary sources of funding are in the form of deposits across a spectrum of retail and wholesale clients. As mitigants, the Group maintains marketable securities in excess of regulatory requirements in order to create a buffer for occasional breaches of concentration limits.

Loan to deposit limit

A limit is put in place, restricting the local currency loan to deposit ratio to a maximum specified level, which is reviewed yearly. Similarly, in order to restrict the extent of foreign currency lending from the foreign currency deposit base, a foreign currency loan to deposit limit, which is also referred to as own resource lending, is observed. As mitigants, the Group maintains high levels of unencumbered marketable and liquid assets in excess of regulatory benchmark. The Central of Bank of Nigeria requires all Bank to maintain a minimum Loan to Deposit ratio of 50%. This ratio is subject to review quarterly. The bank's LDR as at 30 June 2026 was 50.00% (Dec 2025: 48.13%)

STANBIC IBTC HOLDINGS PLC

Risk and capital management (continued) for the six month period ended 30 June 2026

Intra-day liquidity management

The Group manages its exposures in respect of payment and settlement systems. Counterparties may view the failure to settle payments when expected as a sign of financial weakness and in turn delay payments to the Group. This can also disrupt the functioning of payment and settlement systems. At a minimum, the following operational elements are included in the Group's intra-day liquidity management:

- capacity to measure expected daily gross liquidity inflows and outflows, including anticipated timing where possible;
- capacity to monitor its intra-day liquidity positions, including available credit and collateral;
- sufficient intra-day funding to meet its objectives;
- ability to manage and mobilise collateral as required;
- robust capacity to manage the timing of its intra-day outflows; and
- readiness to deal with unexpected disruptions to its intra-day liquidity flows.

Daily cash flow management

The Group generates a daily report to monitor significant cash flows. Maturities and withdrawals are forecast at least three months in advance and management is alerted to large outflows. The report, which is made available to the funding team, ALM and market risk also summarises material daily new deposits as well as the interbank and top depositor reliance (by value and product).

The daily cash flow management report forms an integral part of the ongoing liquidity management process and is a crucial tool to proactively anticipate and plan for large cash outflows.

Interbank reliance

Interbank funding traditionally is seen as the most volatile and least stable source of funding, easily influenced by market sentiment and prone to flight under stress situations. Consequently, to ensure prudent liquidity management is enforced, the Group restricts the local currency interbank funding as a proportion of the local currency funding base to a maximum of 15% of the total currency funding base.

Liquidity stress testing and scenario testing

Anticipated on- and off-balance sheet cash flows are subjected to a variety of the Group specific and systemic stress scenarios in order to evaluate the impact of unlikely but plausible events on liquidity positions. Scenarios are based on both historical events, such as past emerging markets crises, past local financial markets crisis and hypothetical events, such as an entity specific crisis. The results obtained from stress testing provide meaningful input when defining target liquidity risk positions.

Maturity analysis of financial liabilities by contractual maturity

The tables below analyse cash flows on a contractual, undiscounted basis based on the earliest date on which the Group can be required to pay (except for trading liabilities and trading derivatives) and may therefore not agree directly to the balances disclosed in the consolidated statement of financial position.

Derivative liabilities are included in the maturity analysis on a contractual, undiscounted basis when contractual maturities are essential for an understanding of the derivatives' future cash flows. All other derivative liabilities are treated as trading instruments and are included at fair value in the redeemable on demand stage since these positions are typically held for short periods of time.

The following tables also include contractual cash flows with respect to off-balance sheet items which have not yet been recorded on-balance sheet. Where cash flows are exchanged simultaneously, the net amounts have been reflected.

Liquidity contingency plans

The Group recognises that it is not possible to hold sufficiently large enough quantity of readily available liquidity to cover the least likely liquidity events. However, as such events can have devastating consequences, it is imperative to bridge the gap between the liquidity the Group chooses to hold and the maximum liquidity the Group might need.

The Group's liquidity contingency plan is designed to, as far as possible, protect stakeholder interests and maintain market confidence in order to ensure a positive outcome in the event of a liquidity crisis. The plan incorporates an extensive early warning indicator methodology supported by a clear and decisive crisis response strategy. Early warning indicators span Group specific crises, systemic crises, contingency planning, and liquidity risk management governance and are monitored based on assigned frequencies and tolerance levels. The crisis response strategy is formulated around the relevant crisis management structures and addresses internal and external communications, liquidity generation, operations, as well as heightened and supplementary information requirements.

Foreign currency liquidity management

A number of indicators are observed to monitor changes in either market liquidity or exchange rates. Foreign currency loans and advances are restricted to the availability of foreign currency deposits.

Funding strategy

Funding markets are evaluated on an ongoing basis to ensure appropriate Group funding strategies are executed depending on the market, competitive and regulatory environment. The Group employs a diversified funding strategy, sourcing liquidity in both domestic and offshore markets, and incorporates a coordinated approach to accessing capital and loan markets across the Group.

Concentration risk limits are used within the Group to ensure that funding diversification is maintained across products, sectors, geographic regions and counterparties.

Primary funding sources are in the form of deposits across a spectrum of retail and wholesale clients, as well as long-term capital and loan markets. The Group remains committed to increasing its core deposits and accessing domestic and foreign capital markets when appropriate to meet its anticipated funding requirements.

Depositor concentrations

	Jun 2026 %	Dec 2025 %
Single depositor	4	3
Top 10 depositors	31	18

Risk and capital management (continued)
for the six month period ended 30 June 2026

Market risk

The identification, management, control, measurement and reporting of market risk is categorised as follows:

Trading market risk

These risks arise in trading activities where the bank acts as a principal with clients in the market. The Group's policy is that all trading activities are contained within the bank's Corporate and investment banking trading operations.

Banking book interest rate risk

These risks arise from the structural interest rate risk caused by the differing re-pricing characteristics of banking assets and liabilities.

Foreign currency risk

These risks arise as a result of changes in the fair value or future cash flows of financial exposures due to changes in foreign exchange rates.

Equity investment risk

These risks arise from equity price changes in unlisted investments, and managed through the equity investment committee, which is a sub-committee of the executive committee.

The primary objective of the Group's investment in equity securities is to hold the investments for the long term for strategic purposes. Management is assisted by external advisers in this regard. All the Groups investments are designated as at FVOCI, as they are not held for making short term profit.

Framework and governance

The board approves the market risk appetite and standards for all types of market risk. The board grants general authority to take on market risk exposure to the asset and liability committee (ALCO). ALCO sets market risk policies to ensure that the measurement, reporting, monitoring and management of market risk associated with operations of the bank follow a common governance framework. The bank's ALCO reports to EXCO and also to the board risk management committee.

The in-country risk management is subject to SBG oversight for compliance with Group standards and minimum requirements.

The market risk management unit which is independent of trading operations and accountable to ALCO, monitors market risk exposures due to trading and banking activities. This unit monitors exposures and respective excesses daily, report monthly to ALCO and quarterly to the board risk management committee.

Market risk measurement

The techniques used to measure and control market risk include:

- daily foreign currency trading position
- daily VaR;
- back-testing;
- PV01; and
- annual net interest income at risk.

Daily foreign currency trading position

The board on the input of ALCO, sets limits on the level of exposure by currency and in aggregate for overnight positions. The latter is also aligned to the foreign currency trading position limit as specified by the regulators, which is usually a proportion of the Groups' capital.

Daily value-at-risk (VaR)

VaR is a technique that estimates the potential losses that may occur as a result of market movements over a specified time period at a predetermined probability.

VaR limits and exposure measurements are in place for all market risks the trading desk is exposed to. The bank generally uses the historical VaR approach to derive quantitative measures, specifically for market risk under normal market conditions. Normal VaR is based on a holding period of one day and a confidence level of 95%. Daily losses exceeding the VaR are likely to occur, on average, 13 times in every 250 days.

The use of historic VaR has limitations as it is based on historical correlations and volatilities in market prices and assumes that future prices will follow the observed historical distribution. Hence, there is a need to back-test the VaR model regularly.

VaR back-testing

The Group and the banking business back-test its foreign currency, interest rate and credit trading exposure VaR model to verify the predictive ability of the VaR calculations thereby ensuring the appropriateness of the model. Back-testing exercise is an ex-post comparison of the daily hypothetical profit and loss under the one-day buy and hold assumption to the prior day VaR. Profit or loss for back-testing is based on the theoretical profits or losses derived purely from market moves both interest rate and foreign currency spot moves and it is calculated over 250 cumulative trading-days at 95% confidence level.

Risk and capital management (continued)
for the six month period ended 30 June 2026
Stress tests

Stress testing provides an indication of the potential losses that could occur in extreme market conditions.

The stress tests carried out include individual market risk factor testing and combinations of market factors on individual asset classes and across different asset classes. Stress tests include a combination of historical and hypothetical simulations.

PV01

PV01 is a risk measure used to assess the effect of a change of rate of one basis point on the price of an asset. This limit is set for the fixed income, money market trading, credit trading, derivatives and foreign exchange trading portfolios.

Other market risk measures

Other market risk measures specific to individual business units include permissible instruments, concentration of exposures, gap limits, maximum tenor and stop loss triggers. In addition, only approved products that can be independently priced and properly processed are permitted to be traded.

Pricing models and risk metrics used in production systems, whether these systems are off-the-shelf or in-house developed, are independently validated by the market risk unit before their use and periodically thereafter to confirm the continued applicability of the models. In addition, the market risk unit assesses the daily liquid closing price inputs used to value instruments and performs a review of less liquid prices from a reasonableness perspective at least fortnightly. Where differences are significant, mark-to-market adjustments are made.

Annual net interest income at risk

A dynamic forward-looking annual net interest income forecast is used to quantify the banks' anticipated interest rate exposure. This approach involves the forecasting of both changing balance sheet structures and interest rate scenarios, to determine the effect these changes may have on future earnings. The analysis is completed under both normal market conditions as well as stressed market conditions.

Analysis of Value-at-Risk (VaR) and actual income

The table below highlights the historical diversified normal VaR across the various trading desks. The minimum and maximum trading diversified normal VaR stood at N630 million and N3.177 billion respectively with an annual average of N1.56 billion and a closing balance of N1.68 billion.

Diversified Normal Var Exposures (N'million)

Desk	Maximum ¹	Maximum ¹	Average	Closing
30-Jun-26				
Debt Securities	2,063	458	1,037	1,258
Foreign Exchange	2,217	112	997	1,141
Diversification Benefit ²	-	-	(476)	(723)
Aggregate	3,177	630	1,558	1,675
31-Dec-25				
Debt Securities	1,903	412	1,085	723
Foreign Exchange	1,739	15	237	531
Diversification Benefit ²	-	-	(140)	(319)
Aggregate	2,212	466	1,182	935

1. The maximum and minimum VaR figures reported for each market variable do not necessarily occur on the same day. As a result, the aggregate VaR will not equal the sum of the individual market VaR values, and it is inappropriate to scribe diversification effect to VaR when these values may occur on different days.

2. Diversification benefit is the benefit of measuring the VaR of the trading portfolio as a whole, that is, the difference between the sum of the individual VaRs and the VaR of the whole trading portfolio.

STANBIC IBTC HOLDINGS PLC

Risk and capital management (continued) for the six month period ended 30 June 2026

Interest rate risk in the banking book

Interest rate risk in the banking book (IRRBB) can be defined as the reduction in banking book net interest income due to changes in interest rates arising from the different re-pricing characteristics of banking book assets and liabilities. IRRBB is further divided into the following sub-risk types:

- Repricing risk referring to the timing differences in the maturity (fixed rate) and repricing (floating rate) of assets and liabilities.
- Yield curve risk arising when unanticipated shifts in the yield curve have adverse effects on the Group's income.
- Basis risk arising from the imperfect correlation in the adjustment of the rates earned and paid on different instruments with otherwise similar repricing characteristics.
- Optionality risk arising from the options embedded in bank asset and liability portfolios, providing the holder with the right, but not the obligation, to buy, sell, or in some manner alter the cash flow of an instrument or financial contract.
- Endowment risk referring to the interest rate risk exposure arising from the net differential between interest rate insensitive assets such as non-earning assets and interest rate insensitive liabilities such as non-paying liabilities and equity.

Approach to managing interest rate risk on positions in the banking book

Banking-related market risk exposure principally involves the management of the potential adverse effect of interest movements on banking book earnings (net interest income and banking book mark-to-market profit or loss).

The Group's approach to managing IRRBB is governed by prudence and is in accordance with the applicable laws and regulations, best international practice and the competitive situation within which it operates in financial markets. Interest rate risk is transferred to and managed within the bank's treasury operations under supervision of ALCO.

The table below summarizes the Group's interest rate gap position:

as at 30 June 2026	Note	Carrying amount	Rate Sensitive	Non-rate sensitive
Assets N'million				
Cash and balances with central banks	7	1,392,270	-	1,392,270
Pledged Assets	8	284,130	-	284,130
Derivative Assets	10.6	70,351	-	70,351
Financial Investment	11	1,635,132	-	1,635,132
Loans and advances to Banks	12	856,472	-	856,472
Loans and advances to Customers (Gross)	12	2,673,602	2,463,502	210,100
Reinsurance assets	17	1,460	-	1,460
Other financial assets		1,018,907	-	1,018,907
		7,932,324	2,463,502	5,468,822
Liabilities				
Derivative liabilities	10.6	4,302	-	4,302
Trading liabilities	9.2	1,862,727	-	1,862,727

Deposits from customers	23	4,629,776	-	4,629,776
Debt securities issued	25	175,602	175,602	-
Debt securities issued	24	526,890	-	526,890
Insurance contract liabilities	28.3	83,388	-	83,388
Other liabilities (see (b) below)		1,042,795	-	1,042,795
		9,428,951	175,602	9,253,349
Total interest repricing gap		-1,496,627	2,287,900	(3,784,527)

Measurement of IRRBB

The analytical technique used to quantify IRRBB is an earnings based approach. A dynamic, forward-looking net interest income forecast is used to quantify the bank's anticipated interest rate exposure. Desired changes to a particular interest rate risk profile are achieved through the restructuring of on-balance sheet repricing or maturity profiles. All assets and liabilities are allocated to gap intervals based on either their repricing or maturity characteristics. However, assets and liabilities for which no identifiable contractual repricing or maturity dates exist are allocated to gap intervals based on behavioural profiling.

The impact on net interest income due to interest rate changes cover 12 months of forecasting and allows for the dynamic interaction of payments, new business and interest rates. The analyses are done under stressed market conditions in which the banking book is subjected to an upward 410 basis points (vs 300 basis points as of 31 December 2025) and downward 283 basis points (vs 300 basis points as of 31 December 2025) parallel rate shocks for local currency and 82 basis points upward and 81 basis points downward parallel rate shocks for June 2026 (vs 100 basis points upward and downward parallel rate shocks for December 2025) for foreign currency positions. The table below shows the sensitivity of the bank's net interest income in response to standardised parallel rate shocks.

30 June 2026		NGN	USD	Total
Increase in basis points		300	100	
Sensitivity of annual net interest income	NGNm	52,629	5,494	58,124
Decrease in basis points		300	100	
Sensitivity of annual net interest income	NGNm	(86,646)	(7,618)	(94,264)

31 December 2025		NGN	USD	Total
Increase in basis points		300	100	
Sensitivity of annual net interest income	NGNm	41,041	15,108	56,149
Decrease in basis points		300	100	
Sensitivity of annual net interest income	NGNm	(45,772)	(11,148)	(56,920)

Hedging of endowment risk

IRRBB is predominantly the consequence of endowment exposures, being the net exposure of non-rate sensitive liabilities and equity less non-rate sensitive assets. The endowment risk is hedged using marketable liquid instruments in the same currency as the exposure as and when it is considered opportune. Hedge decisions are made by ALCO following careful consideration of the interest rate views to be hedged against, including magnitude, direction, timing and probability, and the exposure to be hedged.

Risk and capital management (continued)
for the six month period ended 30 June 2026
Market risk on equity investment

The Group's equity and investment risk committee (SEIRC) has governance and oversight of all investment decisions. The committee is tasked with the formulation of risk appetite and oversight of investment performance. In this regard, a loss trigger is in place for the non-strategic portion.

Exposure to currency risks

The Group takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange rates on its financial position and cash flows. The board sets limits on the level of exposure by currency and in aggregate for both overnight and intra day positions, which are monitored daily. The table below summarises the Group's exposure to foreign currency exchange risk as at 30 June 2026.

STANBIC IBTC HOLDINGS PLC

Risk and capital management (continued) for the period ended 30 June 2026

Basel II framework

The Basel II framework stipulates a minimum level of capital that banks must maintain to ensure that they can meet their obligations, cover unexpected losses; and can, very importantly, promote public confidence. It also specifies comprehensive disclosure requirements for banks operating under the framework.

"The Basel II framework is based on three pillars:

- Pillar I - Minimum Capital Requirements. This details various approaches to measure and quantify capital required for the three major risk components that a bank faces: credit risk, market risk and operational risk. Stanbic IBTC has adopted the Standardized Approach for Credit and Market Risk and the Basic Indicator Approach for Operational Risk.
- Pillar II - Supervisory Review. This is structured along two separate but complementary stages; the Internal Capital Adequacy Assessment Process (ICAAP) and the Supervisory Review and Evaluation process (SREP). The bank conducts a self-assessment of its internal capital requirements via the ICAAP whilst the Central Bank of Nigeria (CBN) conducts its assessment of the bank via the SREP.
- Pillar III – Market Discipline allows market participants access information on risk exposure and risk management policies and procedures through disclosures. The bank through this Pillar III Disclosures report provides an overview of its risk management practices in line with the CBN Guidance Notes on Pillar III Disclosures.

The Pillar III Disclosures Report is published and made available through the bank's website at www.stanbicibtcbank.com.

Capital management

Capital adequacy

The Stanbic IBTC Group manages its capital base to achieve a prudent balance between maintaining capital ratios to support business growth and depositor confidence and providing competitive returns to shareholders. The capital management function is designed to ensure that Stanbic IBTC Group and its principal subsidiaries are capitalized in line with the Group's risk appetite and target ratios, both of which are approved by the board for legal and regulatory compliance purposes. The Group ensures that its actions do not compromise sound governance and appropriate business practices and it eliminates any negative effect on payment capacity, liquidity and profitability.

The regulatory capital requirement for entities within the Group are as follows:

SN	Name of Entity	Primary Regulator	Minimum Capital Requirement
1	Stanbic IBTC Holdings	Central Bank of Nigeria	N216.27 billion*
2	Stanbic IBTC Bank	Central Bank of Nigeria	N200 billion
2.1	Stanbic IBTC Nominees Limited	Central Bank of Nigeria	Nil
3	Stanbic IBTC Pension Managers Limited	National Pension Commission	N5 billion

9	Stanbic IBTC Insurance Limited	National Insurance Commission	N10 billion
10	Stanbic IBTC Ventures Limited	-	Nil
11	Zest Payments Limited	Central Bank of Nigeria	N100 million

*Sum of the stakes of Stanbic IBTC Holdings PLC in the minimum paid up capital of all the subsidiaries

STANBIC IBTC HOLDINGS PLC

Risk and capital management (continued) for the period ended 30 June 2026

The Central Bank of Nigeria (CBN) on 29 August 2014 issued Guidelines for Licensing and Regulation of Financial Holding Companies in Nigeria ("Guidelines"). According to the Guidelines, a financial holding company shall have a minimum paid up capital which shall exceed the sum of the minimum paid up capital of all its subsidiaries, as may be prescribed from time to time by the sector regulators. A review of the capital level as at the end of the year shows that Stanbic IBTC Holdings is in compliance with the regulation of having minimum paid up capital which exceeds the aggregate of the minimum paid up capital of all its subsidiaries excluding the bank. CBN released new directives on recapitalization for banks on 28 March 2024. As a commercial Bank with national authorization, Stanbic IBTC bank is expected to maintain a minimum capital of ₦200 billion on/before 31 March 2026. This directive has been fully complied with.

<i>Figures in ₦'million</i>	Paid-up Capital	% Holding	Holdco Share

*Stanbic IBTC Holdings has 75% direct and 25% indirect shareholdings in Stanbic IBTC Insurance Brokers Limited.

The Group's capital management aims to facilitate the allocation and use of capital, such that it generates a return that appropriately compensates shareholders for the risks incurred. Capital is actively managed and forms a key component of the Group's budget and forecasting process. The capital plan is also tested under a range of stress scenarios as part of the Group's recovery plan and the Internal Capital Adequacy Assessment Process (ICAAP) for the bank. The ICAAP is an extensive internal assessment of the quality and robustness of the bank's governance, risk management, capital management and financial planning frameworks, and an assessment of the resilience of the bank's business model under stress. Monitoring and reporting of risks also occurs at the Group level to ensure compliance with Group standards.

The Group's capital management function is governed primarily by the Asset and Liability Committee (ALCO), a management level sub-committee that oversees the risks associated with capital management. It is also governed at the board level through the Board Risk Management Committee (BRMC). The principal governance document is the capital management framework.

The Group manages its capital levels to support business growth, maintain depositor and creditor confidence, create value for shareholders and ensure regulatory compliance.

Regulatory Capital

The Central Bank of Nigeria (CBN) adopted the Basel III capital framework with effect from 01 November 2021. The Group and its banking subsidiary have established processes and necessary measures to ensure full compliance with the requirements of the Basel III capital framework since it was adopted.

Regulatory capital is divided into two tiers:

Tier 1 capital which comprises Common Equity Tier 1 (CET1) and Additional Tier 1 (AT1) capital. CET1 includes share capital, share premium, retained earnings and reserves created by appropriations of retained earnings. Deferred tax asset, intangible assets and total investment in subsidiaries are deductible in arriving at CET1 capital. AT1 capital is made up of perpetual non-cumulative preference shares, perpetual non-callable bonds and related instruments.

**Risk and capital management (continued)
for the period ended 30 June 2026**

Tier 2 capital which includes subordinated debts and other comprehensive income. 50% of total investment in subsidiaries is deductible in arriving at Tier 2 capital. Subordinated debt at the end of the year is described as follows:

- Tier 2 capital includes subordinated debt and other income. The subordinated debt at the end of year comprise of USD denominated subordinated facility of USD125 million from African Development Bank(AFDB). The facility expires on - November 2035 and interest is payable at SOFR plus 4.50%.

Total eligible Tier 2 Capital as at 30 June 2026 was ₦190.01 billion (June 2025: ₦119.59 billion).

Investment in unconsolidated subsidiaries and associates are deducted from Tier 1 and 2 capital to arrive at total regulatory capital.

Capital Adequacy

The Group's capital adequacy is measured by both regulatory capital and economic capital. Economic capital measures and reports all quantifiable risks on a consistent risk-adjusted basis.

Regulatory capital adequacy is measured based on Pillar 1 of the Basel II capital framework. Capital adequacy ratio is calculated by dividing the capital held by total risk-weighted assets. Risk weighted assets comprise computed risk weights from credit, operational and market risks associated with the business of the Group. Notional risk weighted asset for market risk is calculated using the standardised approach while operational risk is determined using the basic indicator approach. Management monitors the capital adequacy ratio on a proactive basis.

Throughout the period under review, the banking subsidiary operated above its capital adequacy ratio risk appetite limit and well over the minimum regulatory capital adequacy ratio of 10% as mandated by CBN.

Leverage Ratio

This is non-risk based capital measure introduced in the CBN Basel III guidelines to act as a supplementary measure to the risk-based capital requirements. The leverage ratio is calculated as capital measure divided by exposure measure and is expressed as a percentage. The capital measure is the Tier I capital of banks while the exposure measure comprises on-balance sheet exposures, derivatives, securities financing transactions and off-balance sheet exposures. Banks are required to maintain a minimum leverage ratio of 4% at all times.

*Capital adequacy ratio stood at 25.1% under Basel II and Basel III guidelines. The Basel III guidelines were released on 02 September 2021 by the CBN to further strengthen the resilience of Nigerian banks by increasing the minimum requirement for high quality capital which can absorb losses on a going concern basis, and by requiring banks to build up additional capital buffers to cushion against future unexpected losses. The implementation of the Basel III guidelines commenced with a parallel run with the Basel II guidelines effective from November 2021.

Leverage ratio	N/A	7.9%	N/A	8.3%

*Capital adequacy ratio stood at 20.88% and 20.89% under Basel II and Basel III guidelines respectively. The Basel III guidelines were released on 02 September 2021 by the CBN to further strengthen the resilience of Nigerian banks by increasing the minimum requirement for high quality capital which can absorb losses on a going concern basis, and by requiring banks to build up additional capital buffers to cushion against future unexpected losses. The implementation of the Basel III guidelines commenced with a parallel run with the Basel II guidelines effective from November 2021.
